TO: Indiana General Assembly Legislative Council

FROM: Carol Cutter, Chief Deputy for Health and Legislative Affairs  
Indiana Department of Insurance 

RE: Current Preauthorization Practices and Procedures Used by Insurers  
and Health Maintenance Organizations ("HMOs")

DATE: November 1, 2007

Pursuant to Senate Enrolled Act 372 (Pub. Law No. 56-2007), the Department of Insurance ("IDOI") submits this report regarding the current preauthorization practices and procedures used by Indiana insurers and HMOs.

### I. Summary of Report

This report will provide a description of the IDOI's study of current preauthorization practices and procedures used in Indiana. We will describe how we gathered information and provide some accounting of the costs and benefits of preauthorization. We will list the possible legislative responses that were suggested during our study and make recommendations. Finally, we will briefly address standardization of other items the IDOI was permitted to study.

### II. The IDOI's Assigned Task

The IDOI was charged with studying the current preauthorization practices and procedures used by insurers and HMOs. Preauthorization procedures relate primarily to non-emergency/non-urgent surgeries and radiological services, specialists, and prescription drugs. The Department was asked to allow representatives of insurers, HMOs, and health care providers ("HCPs") to provide testimony concerning whether the current preauthorization practices and procedures require the establishment of standards to ensure uniformity, timely response, and the provision of reasonably sufficient information to health care providers concerning payment of claims.

The IDOI was also permitted to study standardization of:

- explanation of benefit forms;

- the length of time an HCP has to submit a claim for payment for health care services to an insurer or HMO;
- the format, information, and location of information concerning health benefit cards; and
- the manner and time frame in which an out of network HCP is informed by an insurer or an HMO of the reimbursement rate the HCP will receive for a CPT code of a health care service for which the HCP receives preauthorization from the insurer or HMO.

### III. Information Gathering Process

The IDOI held three public hearings, which were advertised in the Indiana Register. Meetings were held July 25, 2007, in Conference Room 19 of the Indiana Government Center South; August 22, 2007, in Conference Room C of the Indiana Government Center South; and September 19, 2007, in the mini-auditorium on the second floor of the American United Life Building. Transcripts of these hearings are available upon request, but due to their size were not scanned and included with this report. Insurers, HMOs, HCPs, consumers and other interested parties provided input.

In addition, the IDOI provided the opportunity for anyone to make a comment or provide information by sending email to Chief Deputy Carol Cutter. Outside of the public hearings, the IDOI held one meeting with members of the insurance industry, and one meeting with members of the Indiana State Medical Association. Those meetings took place at the IDOI office. Also, a letter on the subject was received from Michael Yoder, CEO of Southside Family Medical Group, LLC., who attended the public meetings. That letter is also included with this report.

### IV. Costs and Benefits of Preauthorization

The IDOI was unable to secure any specific studies indicating the cost versus the benefit of preauthorization. However, Linda Barrabee, Regional Vice President for Anthem Blue Cross and Blue Shield, stated that since Anthem put preauthorization procedures in place, it has saved \$5.8 million on radiology services in Indiana. (9/19/07 transcript, pp 21-22) She further stated that Anthem projected its claim payments in Indiana would increase by \$135 million if preauthorization was disallowed, based upon their actuaries' reviews.

JAMES ATTERHOLT, Commissioner

HCPs argue that much of the savings realized by the insurers is offset in the cost to HCPs for additional staff to process preauthorizations. Robert Clutter, M.D., estimated that his office, which services approximately 100 patients per day, spends generally \$50 per day – or \$0.50 per patient – on preauthorizations. (9/19/07 transcript, pp 32, 37-38) Much of this time, according to the providers, is spent on hold on the telephone. Mr. Yoder's letter stated that they spend approximately \$25,000 per full-time equivalent physician per year to process referrals, pre-certifications, and prior authorizations. (Yoder letter, p 2)

V. Points of Contention surrounding preauthorization procedures:

a. Limits on Retroactive Denials

Although there was no conclusive evidence that this practice is frequent or widespread, it is the driving issue for providers' opposition to preauthorizations in any form. To address this, the IDOI reviewed actions other states have taken in dealing with this concern. Alaska, California, Colorado, Connecticut, Florida, Idaho, Kentucky, Louisiana, Maine, Maryland, Minnesota, Missouri, New Jersey, New Mexico, North Carolina, Ohio, Texas, Virginia, and Washington all have some restriction on denials of a preauthorized procedure. At the third public hearing the IDOI distributed the following suggested language. Representatives of HCPs and industry have reviewed and voiced general approval of it:

When prior approval for a covered service is required of and obtained by or on behalf of a covered person, the approval shall be final and may not be rescinded by the payor once the service has been provided, except in cases of fraud, misrepresentation, nonpayment of premium, exhaustion of benefits, or ineligibility\*.

During an approved surgical or other invasive procedure, if a provider performs an additional (related) covered procedure due to medical necessity, coverage may not be denied solely for lack of prior approval, although the additional

JAMES ATTERHOLT, Commissioner

procedure was not included in the original prior approval.

[\*Ineligibility is a denial of benefits for not meeting the eligibility requirements of the plan.]

The IDOI would recommend this language be included in a departmental Bulletin and issued to industry and providers as a requirement of best practices to be followed.

Interestingly, it was quickly apparent from the public meetings that this concern does not exist for providers in an HMO network. The HMO provider contracts usually state that any service or procedure subsequently denied for coverage is at the expense of the provider, not the patient.

b. Requiring Preauthorizations to Be Made in Writing

Another concern for HCPs is that occasionally when they call the contact number on a patient's ID card and receive preauthorization, including the details, they may be told later (when coverage is denied) that the insurer has no preauthorization staff by that name and no record of such preauthorization. A suggestion was made that all preauthorization approvals be required to be made in writing. This is also the preference of the insurers/payors. If the HCPs will use the electronic processes on the payor websites or even fax the forms, there would automatically be a written record of the event.

The insurers indicated that although they currently provide the ability to receive written preauthorization approvals through electronic or fax processes, the HCPs do not typically take advantage of such systems. Anthem's Linda Barrabee commented that upon review of the prior approval records of a large radiology practice she learned only about 5% of the preauthorization requests were made electronically via the web, 10% were made via fax, and the rest were made telephonically. Requests made via the web or fax are not only written evidence of prior approval, they are delivered in seconds or minutes rather than hours. (9/19/07 transcript, pp 58-59) These are solutions to two of the concerns the HCPs stated

previously. It would appear that the opportunity for the HCPs to reduce costs and improve efficiency for preauthorization procedures are available in the marketplace now.

c. **Waivers of Preauthorization Requirements for Certain Providers**

An idea that was applauded by some HCPs at the public hearings was to require preauthorization only for HCPs new to a network and for HCPs who have been proven to over-utilize expensive services. HCPs stated that they are rarely denied preauthorization for a requested service, so they questioned its value. However, insurers responded that much of the savings from requiring preauthorization is realized from the "sentinel effect." Insurers believe that HCPs are cautious about what tests they order because they know that an unnecessary procedure will not be covered. In light of the constant changes in technology, it would likely be administratively burdensome to specify for each provider in a network which procedures that individual practitioner had to preauthorize or not preauthorize.

d. **Waiver of Non-Coverage by Patient**

A question was posed that did not seem to have an answer: if a patient wants to assume the financial burden of having a denied procedure done, may the HCP provide the procedure? One answer to the problem would be to indicate to the patient s/he has such a right. It should also be made clear to the patient that insurance coverage must not be the sole determination as to the appropriateness or need for certain services.

e. **Requirement that Preauthorization be Available Continuously or Waived**

One frustration for HCPs is attempting to secure a preauthorization outside of regular business hours. A possible solution could be to require an insurer to have preauthorization staff available continuously or, if preauthorization staff is not available, then the preauthorization requirement in the policy would automatically be waived. This situation will most often only apply to an "urgent"

JAMES ATTERHOLT, Commissioner

health condition, since “stat” and “emergent” services don’t require prior approval. Urgent condition preauthorizations usually take one to two days, and the providers would prefer a 24 hour turnaround. This could be addressed in a departmental Bulletin, or included in a statutory change as necessary.

f. Time Limits on Responses

Another common concern for HCPs was the amount of time their staff spends either on hold on the telephone or waiting for a response to a preauthorization request. HCPs recommended that insurers be held to a time limit for responding to preauthorization requests.

Insurers insisted that no preauthorization is required for procedures deemed by the HCP to be “stat” (the most urgent) or “emergent” (needed within a few hours). But HCPs respond that, in practice, they are so concerned about a possible disagreement over whether a procedure was stat or emergent, that they will seek prior approval anyway.

The use of electronic processes will alleviate most of these concerns. There is also a new internet ‘portal’ that creates a ‘one-stop-shopping’ opportunity for providers with multiple insurers/payors. This will allow HCPs to access plan information for patients covered through Humana, Aetna, CIGNA, United Health Care, and others through just one website. Again, these types of electronic procedures should bring down the time and cost investment for providers.

VI. Other Issues

a. Explanation of Benefit (“EOB”) Forms

At the second public hearing, two HCPs recommended mandating a standard format for EOBs. No other comments were received for or against standardizing EOBs.

b. The Length of Time a Provider Has to Submit a Claim for Payment

JAMES ATTERHOLT, Commissioner

Mr. Yoder from Southside Family Medical pointed out that often patients do not provide their HCPs with proper insurance information until months after the procedure is performed. HCPs, he argues, have every incentive to file claims as quickly as they can, because they want to get paid. He pointed out that IC 27-8-5.7-10, effective July 1, 2006, allows insurers to correct payment errors up to two years after a claim was made. Mr. Yoder proposed a similar amount of time for providers to correct their errors. (8/22/07 transcript, pp 92-94)

c. Benefit ID Cards

This topic was discussed at all three meetings. HCPs strongly desire some sort of uniformity to ID cards. The feedback from the insurers was agreeable to some sort of uniformity. The Department would like to create a version of a uniform ID card for providers and the industry to review and approve. IC 27-8-5.8 would allow the IDOI the authority to carry out this action.

One point of nearly universal agreement involved a small addition to ID cards. It was suggested that each ID card include a symbol designating whether the plan is fully insured or a self-funded plan. Insurers felt this designation would help insureds understand if the insurer or the insured's employer is the decision-maker on the plan. HCPs indicated the designation would help them provide guidance to their patients. The insurance industry indicated they would be able to make this addition to ID cards without great cost or effort.

d. Notification to Non-Network Providers of Reimbursement Rates

No comment was received on this topic.

## VII. Summary

All of the participants at the public meetings were very pleased to have the opportunity to express their concerns, frustrations, and recommendations around these various issues. All agreed that just having a voice and hearing other perspectives was most helpful. In sorting through the hours of transcripts, notes, and comments, the IDOI has attempted to select those topics that received the most attention and seemed to generate the most

concern. In each of those instances we have made a recommendation to help resolve it. For the other issues, we have left them for a future study committee who could focus exclusively on them. The only other comment the Department would like to bring to the Council's attention is a growing concern among the providers for preauthorization call centers located outside the U.S. Speaking with other nationalities who are not fluent in English about complicated medical conditions is, they state, not only difficult but potentially dangerous. Perhaps as the providers move to the electronic or fax methods for prior approval of services, this issue will diminish in importance or disappear entirely.

The Department would like to thank Senators Simpson, Lawson and Miller as well as Representatives C. Brown and Welch for sponsoring S.B. 372 to allow those providers and payors who cope with these issues daily the opportunity to examine them and help resolve several of them.

2:40 p.m.	Meeting Adjourned

P R O C E E D I N G S

1  
2  
3 CHIEF DEPUTY CUTTER: My name is Carol  
4 Cutter. I'm with the Department of Insurance.  
5 And, as you probably know from the e-mail  
6 information that went out, part of the -- one of  
7 the tasks that the department was given during the  
8 last legislative session was to address some of the  
9 issues that the legislators here either received  
10 complaints about from their constituents. And one  
11 of them that really bubbled up at the top was  
12 preauthorization and precertification procedures  
13 and practices that exist in our world.

14 And as a result of that, there was a piece  
15 of the legislation that was drafted that would have  
16 probably imposed some of the certain types of  
17 restrictions on insurers and HMOs in terms of using  
18 something like this. And so we thought it better  
19 to at least have a discussion with the folks who  
20 are involved in the process or are impacted by the  
21 process. And the legislators very kindly agreed,  
22 and that's why we're here.

23 So the bill itself, this is Topic No. 1, the  
24 study of preauthorization practices and procedures.  
25 And the other thing that we tacked on later were

1 studying the standardization of the explanation of  
2 benefits forms, the length of time that a health  
3 care provider has to submit a claim for health care  
4 services to an insurer or an HMO, the formation and  
5 location of information concerning the ID cards,  
6 and the manner and time frame in which an  
7 out-of-network health care provider is informed by  
8 an insurer or HMO of the reimbursement rate that  
9 they'll receive for a particular CPT Code of health  
10 care service that has been preauthorized.

11 Since the department is not usually in  
12 charge of study committees, we're going to sort of  
13 fly by the seat of our pants on this deal. And we  
14 really appreciate your attending and helping us go  
15 through some of these issues.

16 We do have a court reporter here with us who  
17 will transcribe all of the comments and information  
18 that we exchange today, which we will certainly be  
19 glad to distribute to you. We have a sign-up sheet  
20 that I left on my desk. So it's doing a lot of  
21 good, but...

22 MS. KORTY: It's going around.

23 CHIEF DEPUTY CUTTER: Okay. Good.

24 Be sure and print your name and -- so  
25 whenever you're going to make comments or whatever,

1 questions or anything that you ask, please identify  
2 yourself so that the court reporter can -- she'll  
3 use the sign-up sheet if you'll print your name on  
4 there that she's spelled it correctly when she does  
5 the transcription. So thank you all for taking --  
6 keeping up with those housekeeping issues.

7 If you have the agenda, you'll see the first  
8 thing we're going to do is talk about  
9 preauthorization and precertification, and one of  
10 the pieces that probably is critical is for us to  
11 hear from the insurer, the HMO side of the market  
12 to find out, you know, what process do they go  
13 through, what does that mean to them, what sort of  
14 functions are attached to that so that all of us  
15 kind of have a better understanding of how that  
16 works. And fortunately several of the folks here  
17 in the room today are either from a carrier or an  
18 HMO and are going to kind of give us some of that  
19 information.

20 The list that you see here, I don't think Kim  
21 Marshall is able to make it today, is she? I don't  
22 know her, so I don't know.

23 How about Claudia Stein from Advantage  
24 Health, is she here? Well, we're two oh two.

25 Holly, you're next. You can either stay

1           there and just make sure that you speak loudly  
2           enough so that the court reporter can pick up your  
3           comments, or if you want to come up to the front  
4           we've got a -- I don't know if the microphone is  
5           hooked up or not. But if you think that would be  
6           helpful for the other folks to hear what you're  
7           saying, that would be fine too.

8           MS. KING: I didn't prepare anything and was  
9           looking forward to hearing the two before me.

10           In our organization we do have certain  
11           things that have to be preauthorized. However, we  
12           leave that up to -- we contract with provider  
13           networks, so we leave that up to the provider  
14           networks. Now, we're an HMO, so we're probably a  
15           little different than the traditional insurance  
16           carrier. But basically it's left up to the  
17           providers to work out what things need to be  
18           preauthorized and what don't.

19           As far as our customer service center -- I  
20           think some of the issues here are probably that our  
21           customer issue center can tell, an insured when  
22           they call in, is that they can look at their  
23           group's contract and say is that particular benefit  
24           covered. But they can't necessarily get into the  
25           clinical of, you know, what needs to happen. For

1 instance, that there's a litany of things on morbid  
2 obesity before you would want to have gastric  
3 bypass. Our providers' networks have said they  
4 should go through these steps first.

5 So again, we leave the clinical stuff up to  
6 the provider and the provider networks, but our  
7 customer service people would be able to tell them,  
8 you know, yes it's a covered benefit or no, it's  
9 not.

10 Now, another thing I guess that's probably  
11 an issue is that sometimes a person might not have  
12 coverage at the time that they go in for treatment,  
13 and we rely on the employers to tell us when  
14 somebody's terminated or not. So, you know, you  
15 would think that that individual member would know  
16 when they're no longer employed or no longer has  
17 coverage or it's possible that he wouldn't know or  
18 possibly he knows and he goes anyway.

19 But we are not always going to be on a  
20 real-time basis with having people terminated from  
21 us on our system. So it's possible that the member  
22 -- or prior member will call in and say is this  
23 covered and we look and say yes, it's a covered  
24 benefit according to the employer contract, but  
25 that person, we don't have the knowledge yet that

1           they've been terminated.

2                       So those are the issues as I can see them.

3           I think there are probably a lot more issues when  
4           you don't -- when carriers don't leave it in the  
5           hands of the providers and the clinical people as  
6           to what procedures they have to go through in  
7           making sure that they meet all those requirements.  
8           In our case, you know, we advocate strongly for the  
9           members so that if that doesn't happen it falls  
10          back on the providers to absorb the cost of that.  
11          It's something that we won't okay because they  
12          didn't go through it. The member's not responsible  
13          if the provider agrees to cover it.

14                      MS. MALOOLEY: I have a question, please.

15                      You said that each provider network develops  
16          their own standards or protocols for prior  
17          authorization?

18                      MS. KING: Uh-huh.

19                      MS. MALOOLEY: You have multiple provider  
20          networks?

21                      MS. KING: We do.

22                      MS. MALOOLEY: And so each network may have  
23          different --

24                      MS. KING: That's correct.

25                      MR. YODER: Michael Yoder, South Side Family

1 Medical Group.

2 When you say "provider network," are you  
3 referring to either St. Francis Health Network or  
4 Methodist?

5 MS. KING: Yes.

6 MR. YODER: Okay.

7 CHIEF DEPUTY CUTTER: I have a question,  
8 too, Holly.

9 By the way, excuse me. I have not  
10 introduced Jerry to you guys. I so apologize. I  
11 know she knows a lot of you in the room already.  
12 Jerry is from State Personnel and we have drafted  
13 her over to the Department of Insurance because of  
14 all her prior history with health policy. And she  
15 is going to serve with me as the director of our  
16 health policy analysis and public information.

17 So you will probably see her at a lot of  
18 department functions from now on as we do the study  
19 committees and some of the other issues. And we're  
20 tickled to death to have her because she is a  
21 wealth of information and knowledge that will  
22 certainly help all of us.

23 MS. MALOOLEY: And I'm tickled to be with  
24 them, so it works both ways. Thank you.

25 CHIEF DEPUTY CUTTER: So let me kind of back

1 up and run this through.

2 I'm sorry. This is Tina Korty, one of my  
3 favorite attorneys from our office.

4 So you're my provider.

5 MR. YODER: Yes.

6 CHIEF DEPUTY CUTTER: And I come to you  
7 because you're going to prescribe some procedure  
8 that I need to have done. Should we pick an  
9 example of one? Let's say I'm going to have a  
10 hysterectomy. Does that have to be preauthorized,  
11 precertified?

12 MS. KING: I don't know. Let's just say it  
13 does.

14 MR. YODER: It's going to depend on the  
15 provider network.

16 CHIEF DEPUTY CUTTER: So there is no -- the  
17 first thing we can establish is there is no  
18 consistency in terms of what the procedures are  
19 that have to be preauthorized or not preauthorized.

20 MS. KING: With M-plan it may be very  
21 different than with a commercial carrier.

22 CHIEF DEPUTY CUTTER: And we'll ask that  
23 same question in a minute.

24 So he has said to me, okay, you know, you're  
25 falling apart, you're going to have to have a

1 hysterectomy. So he contacts you and asks you --

2 MS. KING: Well, he will probably contact  
3 his network. So the people there.

4 CHIEF DEPUTY CUTTER: Whoever they are.

5 MS. KING: And they would say if he doesn't  
6 already know, you know you need to have this and  
7 this documented for M-plan to pay it. And so he'll  
8 say, okay, we're going to have to do this and this  
9 or I'll have to send you here to do this. But  
10 everything will be coordinated. And he's your PCP,  
11 so everything will be coordinated through him.

12 CHIEF DEPUTY CUTTER: Okay. So I go through  
13 that process and he's done all the right things and  
14 he's filled out all the blanks and spaces and done  
15 what he's supposed to. I go ahead and have the  
16 procedure done.

17 Is there any way we can think of a reason  
18 why you would then come back and say, oh, well,  
19 we're sorry, it's not --

20 MS. KING: Well, let's say you really -- you  
21 had lost your coverage. You were with ABC company  
22 and you had terminated or your spouse had  
23 terminated, so your coverage had terminated on the  
24 30th of the month after you went to him on the 5th,  
25 and the employer has not reported to M-plan that

1           you're terminated.

2           MS. KORTY: Is there other than a  
3           termination of coverage?

4           CHIEF DEPUTY CUTTER: Can we think of any  
5           other --

6           MS. MALOOLEY: Do you have different rules,  
7           if you will, for medical necessity determinations?  
8           Is it medically necessary, you know, if it's okay  
9           to get --

10          CHIEF DEPUTY CUTTER: As part of the  
11          preauthorization? Because he's got to substantiate  
12          that --

13          MS. KING: If it's medically necessary.

14          CHIEF DEPUTY CUTTER: -- in the work that he  
15          does in terms of giving that information to the  
16          network.

17          MS. KING: Right.

18          CHIEF DEPUTY CUTTER: So in his mind that  
19          determination has already been made by virtue of  
20          the exam or diagnosis that he's made.

21          MS. KING: Okay. The other thing -- this  
22          really isn't a good example of a hysterectomy. But  
23          let's say it was some sort of procedure that's not  
24          covered. Let's say -- because I think morbid  
25          obesity is at the employer's option whether that's

1 covered or not.

2 CHIEF DEPUTY CUTTER: What about tubal  
3 ligation? Let's say he's going to do -- why would  
4 he do that? That's a bad example.

5 MS. MALOOLEY: Face-lift.

6 MS. KING: Well, I think he would know that  
7 a face-lift or something is going to be cosmetic.

8 CHIEF DEPUTY CUTTER: Somebody help us out.  
9 Yes, Doug?

10 MR. STRATTON: Carol, my name is Doug  
11 Stratton. I'm with the with the ICHIA program, a  
12 high-risk program.

13 One of the other instances, and I think the  
14 point of medical necessity is a good point, if a  
15 provider calls in and says Doug Stratton needs to  
16 have this procedure and the person that takes the  
17 call at the service center says you're with ABC  
18 company, I can see that is a covered benefit.  
19 However, at the time that that call is made the  
20 provider says here's Doug Stratton's circumstances.  
21 And once the procedure is done there may be a  
22 question about that.

23 The medical reviewers will ask to see the  
24 medical records and the clinical information and  
25 they'll look at it and say, you know what, he

didn't need that. According to our protocol, he wasn't a candidate, he should have gotten something done in advance of that. But it will be based on a retrospective review clinically of the information saying Doug Stratton for whatever reason isn't an appropriate candidate for that.

CHIEF DEPUTY CUTTER: That's a good example.

MR. STRATTON: Now, I'll give you this one other illustration that's somewhat similar.

Certainly in the area of experimental and investigational, which tends to be very problematic, there may be a procedure that is approved for a certain situation but it's not approved for a different situation. And if someone calls and says I would like to get an autologous bone marrow transplant, here's the situation. It may be a covered benefit under this set of circumstances, it may not be under another one. And you probably will not be able to determine that until someone raises the question, you look at the clinical and medical records, and then it becomes apparent.

MS. KORTY: And so how deep do your customer service people dig when that call comes in?

MR. STRATTON: Not very. They know they

1 have a series of questions they'll ask. A provider  
2 office is calling and they probably have someone  
3 who knows more about it than the customer service  
4 rep. However, the communication process is not  
5 always clean, clear, exact, complete, and as a  
6 result of that there very well could be something  
7 that somebody says we'll precertify it and when you  
8 get it and look at it later say no, we won't be  
9 able to cover that.

10 CHIEF DEPUTY CUTTER: Dr. Wright, would you  
11 like to kind of give us an idea of what your  
12 procedure is at PHP, please?

13 DR. WRIGHT: Dr. Phil Wright, Physician's  
14 Health Plan of Northern Indiana, Fort Wayne.

15 We are an open-access HMO. We probably have  
16 a simpler situation that we're in than what's been  
17 described so far. We publicize to our physicians  
18 what procedures require prior authorization and we  
19 have forms available for them. We prior authorize  
20 inpatient stays, behavioral services, high-dollar  
21 items, some DME and off-plan referrals.

22 MS. KORTY: Doctor, can you speak up just a  
23 little bit? Thank you.

24 DR. WRIGHT: We have a fairly limited scope.  
25 We require prior authorizations for inpatient

1 stays, behavioral health services, high-dollar  
2 items, high-dollar DMEs, and off-plan referrals.  
3 We communicate the status of the authorization  
4 verbally and with written notification to the  
5 requesting entity, usually a provider.

6 We do global authorizations for inpatients  
7 so we don't break out individual parts of the  
8 authorization to individual providers and do an  
9 entire -- all the services related to all the  
10 admission at once, generally anyway. Our prior  
11 authorizations are dealt with by nurses and  
12 clinical personnel and in our case management  
13 office.

14 That's mostly how we're set up. This allows  
15 us to do case management. It drives certain  
16 benefits and prevents payment for non-covered  
17 items.

18 CHIEF DEPUTY CUTTER: Do you, Dr. Wright, or  
19 do you, Holly, do you have any sense of how many of  
20 those types of situations pop up where there's been  
21 a preauthorization or a precertification --

22 MS. KING: That Doug described?

23 CHIEF DEPUTY CUTTER: Well, where it's  
24 ultimately denied for whatever reason. Do you have  
25 a sense of that?

1 MS. KING: It rarely happens because in our  
2 case the clinical review is not done afterwards. I  
3 mean, that doctor wouldn't be performing that  
4 service until his network approved it. So it's  
5 really unique, I think, to the commercial world or  
6 we're unique in that it doesn't -- we offer it  
7 anyway.

8 CHIEF DEPUTY CUTTER: Just because of the  
9 procedures you follow?

10 MS. KING: Right. And I think that's  
11 reflected probably in our complaint indexes and  
12 stuff, that we just don't have that many denials.

13 DR. WRIGHT: Ours is similarly done.

14 CHIEF DEPUTY CUTTER: Are they?

15 DR. WRIGHT: They're mostly done beforehand  
16 and occasionally have somebody who ventures out and  
17 we have to retroactively deny something. But we  
18 try not to have that be the experience, and it's a  
19 fairly small number that we've had experience that.

20 MS. KORTY: Is that a number that you track?

21 DR. WRIGHT: We haven't, but it would be  
22 very easy for us to.

23 CHIEF DEPUTY CUTTER: Are there any insurer  
24 representatives in the room that can speak about  
25 procedures and practices? Shawn, can you do this

1 from the network perspective or not, or would you  
2 rather not?

3 MR. GIBBONS: I'm Shawn Gibbons and I'm with  
4 the State Association of Health Plans and also  
5 Indiana Health Network.

6 I guess a little point of clarification,  
7 because when we talk about network, we talk about  
8 an HMO or insurer who may have their own contracts  
9 with providers as part of their network can be  
10 different than another carrier used as an  
11 organization like an Indiana Health Network or a  
12 Sagamore as a rental unit. And in those instances,  
13 you know, it can be a little point of clarification  
14 as we're discussing where the network is not  
15 responsible for any of those preauthorization  
16 practices.

17 CHIEF DEPUTY CUTTER: So they go directly to  
18 the carrier?

19 MR. GIBBONS: That's strictly going to the  
20 insurance carrier --

21 CHIEF DEPUTY CUTTER: And the policyholder  
22 that covers that?

23 MR. GIBBONS: -- and those policies and  
24 procedures, exactly.

25 CHIEF DEPUTY CUTTER: Any other comments

1 related to that from anybody else?

2 MS. MALOOLEY: Shawn, let me ask you one  
3 point of clarification.

4 In the case where it's between the carrier  
5 and the patient, if you will, there are no  
6 retrospective denials then? And if so, where does  
7 the responsibility lay?

8 MR. GIBBONS: I actually couldn't speak to  
9 that. That would -- that's not information that I  
10 would then get from the health carrier are those  
11 retrospective denials.

12 CHIEF DEPUTY CUTTER: As a rental network,  
13 since you're not involved in that process, there  
14 wouldn't be any reason for them to make that  
15 information available.

16 MR. GIBBONS: Not only would we not hear  
17 about it, they would have no reason to notify us.

18 CHIEF DEPUTY CUTTER: Right.

19 MS. KORTY: Holly, do you know the answer to  
20 that? Is it the health care provider? If they  
21 have set up a preauthorization and then it's later  
22 denied, the health care provider is the one who  
23 then eats that cost or the patient?

24 MS. KING: In our model -- again, it's a  
25 very different definition.

1 MS. MALOOLEY: Because yours is done  
2 prospectively?

3 MS. KING: Right. And our contracts are  
4 with the provider networks; whereas, I think you're  
5 talking about like a Sagamore or somebody that has  
6 like an IHN who has a network of providers.

7 MS. MALOOLEY: So then it would either be  
8 the patients or the carrier?

9 CHIEF DEPUTY CUTTER: Right. Yes.

10 Well, we're sort of in a quandary, aren't  
11 we? Because it sounds like --

12 MS. HART: I actually have another scenario.

13 CHIEF DEPUTY CUTTER: Okay.

14 MS. HART: I'm Marcie Hart and I am from  
15 Arnett Health Plans, maybe United Health Care, I  
16 don't know what to call us anymore.

17 We have a different situation in that our  
18 prior authorization process starts with the  
19 physician. We look at whether the member is at  
20 risk for going outside of the network or being at  
21 risk for getting a service that they really  
22 shouldn't get in the first place. We want to try  
23 to capture that up front.

24 With that said, obviously there are certain  
25 services that a physician is more capable of

1 recommending that we can subscribe to him. So we  
2 have a lot of physician input. In the scenario  
3 that you were talking about, whether it's the  
4 member risk, the carrier risk, or the provider  
5 risk, our situation is the member ultimately is at  
6 risk because they are the one purchasing the health  
7 plan.

8           However, with that caveat, we have  
9 contractual arrangements with our providers that if  
10 they don't follow the rules, then they have to be  
11 at risk. If it's a non-contracted provider, then  
12 that does put the member in between and it will be  
13 worked out among the carrier, the provider, and the  
14 member at that point. But as contracted providers  
15 they are at risk for following the preauthorization  
16 process.

17           CHIEF DEPUTY CUTTER: Just for the general  
18 audience, how does either a covered person or  
19 enrollee or subscriber or member know what  
20 procedure has to be precertified? Is that  
21 information communicated to that person or not? Or  
22 is that like in the HMO world, is that something  
23 that you as the provider are required to do?

24           MR. YODER: Can I answer that?

25           CHIEF DEPUTY CUTTER: Please.

1           MR. YODER: From our perspective, we have so  
2 many different carriers that we deal with, it's  
3 hard for us to know from one to another what is  
4 required for precertification and what is not. And  
5 it's very difficult for us to stay on top of that.  
6 So a lot of times we simply rely on if we're  
7 ordering tests the provider of the test to come  
8 back and say you need this preauthorized, you need  
9 to be precertified before we will schedule it.

10           There are certain plans that we know by  
11 default, such as St. Francis Health Network, if  
12 we're going out of network we have to get that  
13 preauthorized. We know that. But there's a lot of  
14 things in between that we just simply do not know  
15 because there are so many different plans that we  
16 have to try to manage, that it's virtually  
17 impossible.

18           CHIEF DEPUTY CUTTER: I would think so.

19           MR. YODER: I guess the one question that I  
20 would have, and if this is not the appropriate time  
21 --

22           CHIEF DEPUTY CUTTER: Go right ahead.

23           MR. YODER: -- if a prior preauth or prior  
24 precert is denied as not medically necessary, can  
25 the patient -- and this is something that I haven't

1 got a clear answer on yet -- can the patient sign a  
2 waiver saying, you know, I understand they're going  
3 to deny it, they're not going to pay for it,  
4 they're going to come back in the EOB, Explanation  
5 of Benefits, tell the payer or the provider not a  
6 covered service or not authorized, can the patient  
7 assume responsibility for that even as a contracted  
8 provider?

9 MS. HART: Speaking from Arnett plans, yes.  
10 However, what you do set yourself up for is that a  
11 physician recommending a service isn't necessarily  
12 in the health plan, then you're at risk for the  
13 appeal process and its interpretation. So it's a  
14 fine line. It really depends on I would think good  
15 communication and a good understanding of the  
16 member or the patient's actual coverage and clearly  
17 communicating that it is not covered and everyone  
18 has the same understanding. And that maybe needs  
19 to be said five different ways.

20 MR. YODER: That's true.

21 CHIEF DEPUTY CUTTER: Well, and I think on  
22 the insurer's side there's certainly that  
23 opportunity because all of the contracts that  
24 carriers issue are actually reimbursement  
25 contracts. It says you as the person covered,

1       you're supposed to go out and expend the money, you  
2       know, create the expense, and then submit that to  
3       the insurance company, and then they're supposed to  
4       turn around and reimburse you for whatever portion  
5       of that cost is your responsibility. But with the  
6       assignment of benefits process that probably is a  
7       hundred percent of your patients probably use, then  
8       you have an opportunity to collect that money  
9       directly from the company. But if it's not a  
10      covered service, then that leaves that person on  
11      the hook for whatever expenses they have incurred.  
12      Or if they've used an out-of-network provider, then  
13      they don't have much -- not too many places to hide  
14      either.

15               Do you have another question?

16              MS. KORTY: Well, I was wondering do you  
17      have processes or procedures if a preauthorization  
18      is denied, that either the provider can come back  
19      or the patient can come back and try to change it  
20      out?

21              DR. WRITE: Yes.

22              CHIEF DEPUTY CUTTER: One of the questions  
23      that we're sort of curious about is: Does the  
24      preauthorization/precertification practice or  
25      procedure, does it really end up to be cost-saving

1           for you guys? Does it change things that much?  
2           I'm not doubting that it does. I'm just asking the  
3           question.

4                   MS. DORAN: Gail Doran from PHP.

5           For us, yes, I think initially, especially  
6           with the advent of HMOs, there was a culture of  
7           precertify or preauthorize every single service and  
8           you had to take a step back after a couple of years  
9           of doing that and say what really do we gain from  
10          precertifying. And when Phil answered that we are  
11          fairly simplistic, that's something we review every  
12          year, what gets authorized, how many get approved,  
13          what gets denied, and the denials should always be  
14          up front. And that's where you have to get your  
15          cost savings.

16                   Some are set in the effect of  
17          preauthorizations. You know you have a provider  
18          out there or you know that you have the latest and  
19          greatest in some medical equipment that was  
20          recently bought that suddenly everybody in the  
21          world's going to start having this scan or that  
22          scan that you put a preauth in for.

23                   But for the most part, I would say as the  
24          health plan, yes, they do save money. But I also  
25          would advocate that they are somewhat inproficient

1           for the patient. Phil may disagree.

2           MS. MALOOLEY: Sorry, Doug.

3           MR. STRATTON: I would add to that, and I  
4           agree with all those comments, I think it had the  
5           greatest impact early on in terms of changing some  
6           behavior, and I think everybody is starting to  
7           adjust to that.

8           One of the real advantages that I see in it  
9           is that it is the earliest opportunity to see when  
10          there's a potential significant case coming down  
11          the track. And for those that are actively  
12          involved in medical management, for those that are  
13          aggressive in terms of case management and working  
14          with disease conditions, it's probably the earliest  
15          opportunity to say, you know what, we probably need  
16          to track Doug Stratton. That's the second time  
17          that somebody has said we need to take a chest  
18          x-ray of him, he's now 59 years old, ya-dah,  
19          ya-dah. And that will become a very early warning  
20          mechanism and a very effective tool.

21          And I would argue in some instances I would  
22          want to know even if you were going to assure that  
23          you've precertified virtually all of those  
24          procedures, but it's the type of thing that you  
25          really ought to have some clinical people looking

1 at early on.

2 MR. YODER: Can you not gather that same  
3 information by reviewing claims submissions?

4 MR. STRATTON: Well, claims submissions are  
5 well after the fact, and you may be losing some  
6 very critical time. But that's true, and that  
7 happens as well. And that tends to be much more  
8 clinical evaluation and case studies that look at  
9 broad macro sorts of things as opposed to looking  
10 at Doug Stratton's particular treatment.

11 MS. KORTY: So, Doug, what happens if you  
12 take out that Doug Stratton had his second chest  
13 x-ray at 57? What happens from there? Can you  
14 describe that for us?

15 MR. STRATTON: Well, ideally what would  
16 happen is whoever is involved in the initial  
17 precertification or preauthorization review process  
18 will notify someone that's in either case  
19 management or disease management in our  
20 organization and will say here's a case, and it's  
21 all done electronically, they got this, they send  
22 it automatically to someone else and it shows up on  
23 their screen.

24 And essentially then it becomes that  
25 person's responsibility to check into whatever

1 medical information that you have about this  
2 particular patient and begin the process of saying  
3 we need to do something proactive. And that's when  
4 our clinical people will become involved at that  
5 point.

6 MR. YODER: That's when your clinical people  
7 become involved. They're asking for information  
8 from the doctor's offices, from the specialists,  
9 and bring all that together and doing what?

10 MR. STRATTON: Well, it depends on the  
11 circumstances, obviously. And there are some  
12 instances where this process gets voided very early  
13 because they realize that it's part of a routine  
14 physical this time, so they'll say nothing happens,  
15 don't do anything.

16 Now, taken into the circumstance that you're  
17 suggesting, what will happen is a physician will be  
18 contacted, given a heads-up, and they will be  
19 informed to make contact with whoever the physician  
20 is or provider is that's providing these services  
21 just to simply say we wanted to make you aware that  
22 Doug Stratton has this information associated with  
23 this condition. And particularly in a case with  
24 drug utilization where there's a therapy associated  
25 typically with that kind of condition and you know

1           that there's other drugs that this person's on  
2           that's contraindicated and would be inconsistent.

3                   And if everything worked right and the  
4           systems were perfect and you had the smartest  
5           people taking a look at it, you would be able to  
6           detect pretty early on some things that you clearly  
7           want to avoid or some things that clearly would be  
8           of benefit in the circumstances.

9                   CHIEF DEPUTY CUTTER:   And just as a matter  
10          of a side, the entity that Doug is the executive  
11          director for is the State High Risk Pool.   And  
12          that's all they deal with are people with extreme  
13          health conditions, and they have probably one of  
14          the most successful disease management systems in  
15          place.   There are a lot of other risk pools and  
16          other entities that are always picking his brain to  
17          find out how they do what they do as well as they  
18          do.   We're just tickled to death to have somebody  
19          in that process for us, because it sure helps all  
20          of us as taxpayers that we all are.

21                   Any other comments along that line or any  
22          other descriptions of procedure or circumstances  
23          that would be helpful for us to know at this point?

24                   MR. STRATTON:   Sorry to dominate, Carol.  
25          But I have a question for you.

1           What was the impetus for this study? Is it  
2           complaints that are coming to legislators? And if  
3           so, are those coming from providers that say we're  
4           wasting way too much time here to go through  
5           justification with the carriers? Or is it coming  
6           from the consumers that are saying I'm getting  
7           stuck in the middle and I got stuck with a bill for  
8           \$11,000? My doctor said it was precertified. I  
9           assumed it was good and now I find out I'm stuck  
10          with the bill. What's driving this?

11           CHIEF DEPUTY CUTTER: I would say both of  
12          those things. I think the legislators that raised  
13          this issue see both sides of that and they've heard  
14          from both sides of that issue, both from  
15          constituents who had -- I mean, all of you in this  
16          room I think have been in this industry long enough  
17          to know that the average consumer of health care  
18          services hasn't got a clue about insurance or HMOs  
19          and how they function and what all these words  
20          mean.

21           And when you tell them they've got to  
22          preauthorize or precertify some procedure, you know  
23          what that means to them? You're going to pay for  
24          it, it's covered. If you're going to make them  
25          jump through those hoops -- why would you make them

1 jump through the hoops if it's not going to be paid  
2 for anyway? I mean, just for the rational,  
3 elementary mind, that's the conclusion that they  
4 come to.

5 And so I think there's been enough anecdotal  
6 history on this particular topic that I think  
7 that's probably what ultimately generated the  
8 impetus. And it was -- I'm grateful that the  
9 legislator who was concerned about this gave us  
10 this opportunity. Because otherwise, you guys  
11 would be sitting there going you mean we have to do  
12 what. Trust me, it was going to be pretty ugly.  
13 So this is a good thing. This is actually a good  
14 thing.

15 But, yes, that's probably helpful to know  
16 what drove that. This didn't come from the  
17 department at all. That's not our role. We're  
18 just sort of the coordinator of the information as  
19 it were.

20 MR. BLINE: Ralph Bline of the United Health  
21 Care and Arnett Health Plans.

22 We were, just by way of background, Arnett  
23 HMO was acquired by United at the end of last year.  
24 And so I have with me, and she's already spoken,  
25 Marcie Hart who is currently the manager of

1 operations for Arnett, and continuing Arnett, and  
2 was also for many, many years manager of the member  
3 services department. So she's been in the front  
4 lines of all of this preauthorization interfacing  
5 with the members.

6 Just to sort of reiterate at the risk of  
7 being redundant what PHP said, because we're  
8 structured somewhat similar to them, but  
9 historically over the years we have found due to  
10 pressures from various employer groups and members  
11 that -- and efficiencies, too, I guess, in getting  
12 things done, we are requiring fewer and fewer  
13 procedures to be precertified or preauthorized.

14 However, there are still several current  
15 ones, like PHP mentioned, like where, for instance,  
16 MRIs, where you can see television advertising open  
17 MRIs. And the consumers out there seeing those  
18 ads, and so everybody wants an MRI for any purpose  
19 at all and feels they haven't gotten good value  
20 from their health carrier if they can't get an MRI.  
21 And if there's no real reason, an MRI wouldn't  
22 solve any situation. And so for those it's  
23 absolutely necessary I think to keep  
24 precertification in place for certain things.

25 Marcie, can you elaborate on that?

1 MS. HART: I think the term *latest and*  
2 *greatest* was probably the best. I think we're all  
3 taxed with changing the health care environment and  
4 lowering the cost so that that does equate to lower  
5 premiums that are passed to the consumer. And that  
6 preauthorization process is set up twofold.

7 One, let's be clear, you know, so the health  
8 plan makes more money on their premiums because  
9 they're saving dollars, and also to give the best  
10 value to those members while still providing the  
11 appropriate care. No one is saying that an MRI is  
12 inappropriate in many instances. But oftentimes,  
13 using the MRI example, an x-ray is just as  
14 sufficient. And the general consumer is only  
15 hearing these catch phrases, I want an MRI, when  
16 actually you might need an x-ray.

17 CHIEF DEPUTY CUTTER: So is it the  
18 considered opinion of everybody in this room that  
19 if precertification or preauthorization went away,  
20 that that would have, I'm going to use the word  
21 dramatic, impact on the cost?

22 (Majority of attendees response of yes.)

23 DR. PATTERSON: I'm David Patterson. I'm a  
24 physician in private practice.

25 I hear your comments and I hear where you're

1 coming from from the provider's side. But from the  
2 physician's side, I think you're missing a big part  
3 of the equation. And that is the cost of me hiring  
4 staff just to take care for preauthorizations and  
5 precertifications is astronomical. I'm getting  
6 squeezed from every end. I've got the government  
7 telling me, I've got insurance companies paying me  
8 less and less every year, and I've got more and  
9 more rules to follow including preauthorization and  
10 precertification.

11 I have to hire people to do this. I've got  
12 a business degree and I still can't do this very  
13 well. I have a BA in addition to an MD in addition  
14 to a master's degree. I mean, this trouble I think  
15 that we have as physicians are incredible, and I  
16 don't think that the providers are really aware of  
17 what's going on. You know, we have to write all of  
18 these appeal letters about why we want something  
19 done. The cost to me to do that, I've got to go  
20 research it, I've got to have someone type it up,  
21 I've got to submit it. For something that I'm  
22 already trained to do, it doesn't make sense to me.

23 In my experience most of these things that  
24 we ask for preauthorization and precertifications  
25 on are never denied. So why is the process in

1 place if we're not getting denials? I can't tell  
2 you the last time I was denied a procedure for  
3 something. Other things are trivial. They make no  
4 sense at all.

5 For example, I'm on my way to this meeting  
6 today and I get a call on my cell phone for someone  
7 wanting a preauthorization for generic Allegra.  
8 It's the cheapest allergy medicine on the market,  
9 folks. The only thing cheaper is Claritin at Sam's  
10 or Costco. And I have to take my time out and have  
11 my staff's time to get a preauthorization for  
12 generic Allegra. Now, I've written the generic.  
13 I've tried to save you all money. And in turn you  
14 put bureaucracy back on me to get a  
15 preauthorization for this. It makes no sense at  
16 all.

17 That's why physicians are upset about that.  
18 And I think if it continues, they're going to get a  
19 lot of pushback. So patients are upset about that,  
20 too. And we're talking about drug interactions and  
21 saving all this for drug interaction when I get  
22 this information from insurance companies about all  
23 this important drug interaction and we acted on it  
24 in good faith, it turns out never to be true. The  
25 information they send me is not correct. Either

1 I'm not the provider, they're not on that drug, the  
2 information is wrong. It's rarely useful.

3 When I talk to my colleagues and say what do  
4 you do with that, we uniformly throw it in the  
5 trash. Throw it in the trash. Why would you do  
6 that? We're trying to help them. Why would you  
7 throw that in the trash? Because it's never  
8 accurate. It's never true. It's not helpful at  
9 all. It's a big nuisance.

10 For example, let me give you a specific  
11 example. An insurance company will send me a  
12 letter saying Mrs. Smith has asthma according to  
13 our records and yours. We don't see where she's  
14 had a rescue inhaler. And because she has asthma  
15 she should have a rescue inhaler. That's  
16 important. We need to make sure. Well, it turns  
17 out Mrs. Smith is given a sample in the office. We  
18 had to go take the time, process the letter, look  
19 at the medical record, call the patient, respond to  
20 the letter. Do you know how much time and money  
21 that takes? That's an enormous amount of resources  
22 in the system.

23 MS. MALOOLEY: I have a question.

24 DR. PATTERSON: It's very arduous.

25 MS. MALOOLEY: I understand where you're

1 coming from and I've heard this a lot.

2 So my question is: Carriers, do you  
3 maintain a list of prior authorization requests  
4 that actually save money instead of cost money to  
5 the providers, those that really do make a  
6 difference? Generic Allegra, to me as a layperson,  
7 just seems a bit odd.

8 MS. HART: Arnett Health Plan actually  
9 annually reviews to see the ratio of authorization  
10 requests that come in versus what is denied and see  
11 what really makes sense because, one, we don't want  
12 to do that and, two, you are the best knowledge out  
13 there to know what's right for your patient.

14 So going back to an easy example with the  
15 MRIs, you know, we only have very specific MRIs  
16 that need to be approved. Not all of them are  
17 authorized because we just don't deny them, just as  
18 an easy example.

19 So I think if a health plan is continually  
20 evaluating what really needs to be authorized and  
21 look at the reasons why, making sure that, one,  
22 they're going to get the best health care for the  
23 cost and, two, the ease of the process. We don't  
24 want to make things so excessively cumbersome that  
25 no one's going to --

1 MS. MALOOLEY: But the question is: Do you  
2 have a list and do you know how many have been  
3 denied --

4 MS. HART: Yes.

5 MS. MALOOLEY: -- and the percentage? For  
6 example, I believe several years ago Medicaid  
7 dropped -- this is years ago -- everything had to  
8 be -- we needed to do a prior authorization, okay,  
9 which made us really not want to see Medicaid  
10 patients in this practice because, you know, they  
11 failed one test and we have to have it prior  
12 authorized and it takes a week or two to get that  
13 done. And finally they just realized that they  
14 approved approximately 98 percent of the things  
15 that we needed to get prior authorization for.  
16 They dropped it.

17 MR. YODER: I guess my follow-up question to  
18 that or in addition to that is: Do you track it by  
19 test? For example --

20 MS. MALOOLEY: Right.

21 MR. YODER: I wish Anthem were here  
22 because --

23 MS. MALOOLEY: A procedure code.

24 MR. YODER: -- I have a question regarding  
25 CTs. We are a family practice office, and I

1       respect a lot of what you're saying. But it sounds  
2       like you're trying to pull back. Whatever happened  
3       to the primary care being the gatekeeper? Years  
4       ago the discussion was let the primary care be the  
5       gatekeeper so they can watch all these tests, so  
6       they can make sure we're not overprescribing these  
7       tests.

8               CT scans and Dopplers we have to get  
9       precertified. Those are an emergent requirement  
10      typically. Those are not something that can wait.  
11      But we have to spend up to 30 minutes, and I've  
12      seen my staff spend up to an hour on the phone  
13      trying to get these precertified and prior authed.  
14      That's an extreme, the hour is the extreme. But 20  
15      to 30 minutes is not uncommon, because they're  
16      talking to a layperson on the other end, a  
17      technician who's not a nurse necessarily. Not  
18      every health plan has nurses or MAs answering those  
19      questions.

20             So that's taking my nursing staff away from  
21      their duties of bringing the patients back and  
22      getting them seen by the doctor. A CT scan, we're  
23      looking for specific things. The patient comes in  
24      with a sudden onset headache, they come in with a  
25      worsening headache condition, they're coming in

1 with a change of mental status. So we're looking  
2 for some very specific things when we order a CT  
3 scan. We always have the option of sending that  
4 patient to the ER, in which case they will get a CT  
5 scan without question.

6 MS. MALOOLEY: But at what price?

7 MR. YODER: But at what price. And that is  
8 the point, at what price. Our patients prefer to  
9 come to us as opposed to waiting two or three  
10 hours. The ERs are already overloaded.

11 MS. BARRABER: I'm Linda Barraber with  
12 Anthem.

13 With emergent procedures, you are not  
14 required to get a prior. You need to see that  
15 patient and have a CT scan done, you do it and you  
16 call afterwards. That's been the process that's  
17 been in place at the beginning. If you're having  
18 difficulty with that --

19 MR. YODER: My question is: Why do we need  
20 to preauthorize for something as common as a CT?  
21 It's just adding paperwork. We've never had a CT  
22 scan denied.

23 MS. BARRABER: And I'll be honest with you,  
24 if you look at the numbers of precerts there  
25 haven't been any. But the sentinel effect has been

1 so dramatic that the cost of services for MRIs, CT  
2 scans have dropped in double digits because of  
3 that.

4 When you have situations where you have  
5 scanners that were in dental offices that are now  
6 being used by podiatrists, it's been being  
7 overutilized. So that's why we put that in place,  
8 because people were not doing an x-ray but going  
9 directly to the other scans. But if it's an  
10 emergent situation, we do not require, we do not  
11 require a precert. You call after the fact because  
12 we don't want the claim to be denied.

13 MS. MALOOLEY: But what about just a  
14 telephone call saying this is the ICD-9, tell me if  
15 this is going to be paid for right there on the  
16 phone?

17 MS. BARRABER: Yes.

18 MS. MALOOLEY: Here's the ICD-9 we're going  
19 to use.

20 MS. BARRABER: Yes. We have a precert line  
21 to go through or you can do it on the web.

22 MS. MALOOLEY: Without a retrospective  
23 lookback you okay it based on the ICD-9.

24 MR. YODER: The problem is that the provider  
25 of the CT scan will not submit to scheduling until

1 we get a precert in hand.

2 MS. BARRABER: If it's emergent, they  
3 shouldn't. And if we need to work on that --

4 MR. YODER: Because we have difficulty of  
5 getting paid in arrears is what they're telling us.  
6 So therefore, their policy has become without that  
7 precert number --

8 MS. MALOOLEY: They won't do it.

9 MR. YODER: -- we will not schedule it.

10 MS. BARRABER: If it's a routine -- and I  
11 say routine -- if it's not emergent, absolutely  
12 acceptable. These can be done on the web and they  
13 can be done very quickly. So if I need someone to  
14 come out to your office, I would be happy to do  
15 that.

16 MR. YODER: Great. We'll talk later.

17 MS. MALOOLEY: Dr. Wright?

18 DR. WRIGHT: We have -- and I hope most  
19 payers do this -- but we have regularly looked at  
20 our prior authorizations, because they are working  
21 for us, too. It's impossible to measure the effect  
22 of prior authorization because of the sentinel  
23 effect that she made reference to. That is -- it's  
24 hard to measure what doesn't happen.

25 Once people know that there is a certain

1 procedure, for instance, that is not going to get  
2 covered, you don't need to send a request for it,  
3 and the network knows that. We don't preauthorize  
4 CTs or MRIs at all. I probably shouldn't have the  
5 said that at all. I will probably have a million  
6 of them. And we could at some point do that. But  
7 we really have worked hard at eliminating  
8 unnecessary ones, but there are some out there that  
9 have an effect.

10 I suppose you could measure it to some  
11 extent by looking at over long periods of time  
12 total numbers of procedures that come in. But when  
13 you have a procedure that can be -- that can be  
14 ordered at a time when it's not necessary or a  
15 duplication of services because somebody gets to  
16 another doctor in another center or -- I mean, the  
17 whole system is complicated enough to where it's  
18 hard to get your arms around it and get everything  
19 organized the right way.

20 There are certainly times when -- I mean,  
21 we've all read the stats, and having practiced  
22 medicine for 20 years, I kind of cringe at this.  
23 But I read this that when a physician practiced in  
24 a group and owns a CT scanner, those doctor order a  
25 lot more CT scans. We aren't releasing that. I

1 wouldn't blame someone for doing that, and we may  
2 someday. But there are a lot of things that happen  
3 that are hard to measure, and we definitely don't  
4 want to do any more -- it's in our best interest  
5 not to do prior authorizations when they aren't  
6 necessary. It's a lot of work for us. It's a  
7 headache. We don't want to bother with it.

8           Something that's on the web that's automatic  
9 might be a little easier, but not everybody wants  
10 to do that and not everybody even is aware of that  
11 with all of the different payers to deal with, not  
12 everybody knows with how each one works. So it  
13 gets complicated.

14           MS. BARRABER: And I can say from Anthem,  
15 we've done the same thing. We used to have  
16 probably books of things that we've precertified.  
17 And we've gone through and eliminated and it is not  
18 -- it's mostly inpatient services. Radiology, high  
19 imaging is one we eliminated years ago and that's  
20 when the costs skyrocketed and equipment for  
21 self-referral -- and I have radiology providers  
22 call us all the time saying when are you going to  
23 stop this, you know. Or it was a bad scan and then  
24 they get sent to a radiologist who's scanning at  
25 the hospital and they need another one and they

1           can't get it because we've already paid for one.  
2           And so now that person is eating the cost.

3                       So we actually do have the data, and I don't  
4           it with me, but we looked at it and we removed it  
5           for that very reason. We did not deny that many,  
6           so what are we doing it. It's costing us money.  
7           The costs skyrocketed, it just skyrocketed. And  
8           now we're moving -- we've gone with our high tech  
9           radiology where we're actually with self-reported  
10          data from the offices credentialing the equipment  
11          so we don't have that.

12                      And I mean, we really have been truly -- and  
13          it's self-reported by the provider looking at the  
14          magnets, the credentialing of that, we actually had  
15          a score of a hundred. We have some people that  
16          scored an eight, and I don't know that we want our  
17          patients being scanned by that equipment. An  
18          eight, and it's a self-reported data. And, you  
19          know, often that's not the right equipment either.

20                      So those are the reasons we put that back in  
21          and then the costs then dropped drastically, so  
22          that's why we put that back in. Is it perfect?  
23          No, I'm not going to say it's perfect. We're all  
24          humans doing that. We might make a mistake with it  
25          and so the cost has dropped. And so we've avoided

1           those that would have just looped through the  
2           system, the multiple I've had this one and now it  
3           can't be read by the specialist and now they go to  
4           the specialist and they have to order another one.  
5           Those double procedures would have been paid in the  
6           past and now...

7                   MS. MALOOLEY:   So you are credentialing  
8           equipment which is a move towards your quality  
9           indicators?

10                   MS. BARRABER:   We just started.   We just  
11           started this year, so it's new.

12                   MS. MALOOLEY:   That's nice.

13                   DR. PATTERSON:   Let me clarify something.

14                   You're not reducing cost, you're shifting  
15           costs.   You're shifting onto the providers because  
16           we have to hire the staff, take doctor time, nurse  
17           time, and staff time to do the things that you want  
18           to get your data to lower your cost.   You're not  
19           lowering your costs, you're just shifting the costs  
20           on the providers.

21                   MS. MALOOLEY:   Well, you also have the  
22           employer who is paying the bill too if the employer  
23           is paying the premium.   I must say that too.

24                   MS. BARRABER:   From an Anthem perspective, I  
25           would estimate that 70 to 80 percent is

1 self-funding. So it's the employer that insures  
2 that. When we reduce that or avoid those  
3 unnecessary tests, it goes back to the ultimate  
4 consumer. It does not come to Anthem.

5 CHIEF DEPUTY CUTTER: Did I see another hand  
6 over here?

7 MR. BLINE: I can echo somewhat with  
8 Dr. Wright. I think what you're hearing throughout  
9 the room is from the insurer's' side, it's probably  
10 I'm fair to call it a self-regulating system or  
11 it's to some degree it's self-policing. I know as  
12 the physicians, they see in their offices what  
13 staff has to be allocated to this process.

14 But on the health plan's side,  
15 preauthorizations are a high-pressure situation.  
16 You have to get it right. There's a time clock  
17 running, you know. You have to be adequately  
18 staffed to get that information back or you're  
19 going to have potentially seriously injured members  
20 or disgruntled at best, and that passes down to the  
21 employer, and that's -- you know, no health plan I  
22 know really wants to alienate their members or  
23 their employer groups. So to some degree it's not  
24 perfect, but it is a little bit self-regulating on  
25 just the staffing from the health plan's side too.

1 CHIEF DEPUTY CUTTER: I would like to ask  
2 Anthem to make sure I'm understanding this, because  
3 what I think I've heard from most of the HMO  
4 processes is that because of the way you are  
5 structured and the procedure that you go through,  
6 yours is always for the most part, you know, the  
7 provider already knows what all of the information  
8 is, they know what's medically necessary, they know  
9 this needs to be done. So there are very few  
10 opportunities for something like that to slip  
11 through that you would ultimately look back on and  
12 say oh, well, he shouldn't have done this.

13 MR. YODER: That's not an issue we have a  
14 problem with.

15 MS. MALOOLEY: That's just M-plan? Okay.  
16 That's an HMO. That's all the HMOs?

17 MR. YODER: As providers, I do not get a lot  
18 of patients coming to me and complaining, well,  
19 you've preauthorized this and now they're saying I  
20 have to pay for it. I don't hear a lot of  
21 complaints from patients in that regard at all.

22 CHIEF DEPUTY CUTTER: So with Anthem's new  
23 process that she just described, did that take it  
24 into the same realm where the physician is the one  
25 who's really already made that call and you guys

1 are pretty much going to say okay?

2 MS. BARRABER: On the web it would come back  
3 and say that. And even if they call in and say  
4 they're giving all of the documentation and it goes  
5 through, and again all of the protocols that are  
6 set up by the different societies, it's not our  
7 protocols, then yes, that's how it is and then it  
8 would be paid. They might ask for additional  
9 information for a certain procedure and then it  
10 would be paid.

11 On a lot of radiology and on our normal  
12 precerts, which is for an inpatient, when it has to  
13 get to a medical review, it's a nurse that's  
14 reviewing it. On the front end if it's something  
15 simple, if someone's pregnant, I always love when  
16 someone asks if we're going to deny that person or  
17 that baby. We just don't require it anymore.

18 MS. MALOOLEY: So Linda, are you saying that  
19 inpatient and high-tech radiology are the two major  
20 prior authorization groups?

21 MS. BARRABER: It used to be a lot more.  
22 And there's a few other things that are not a great  
23 deal.

24 MR. YODER: I have a question. You said if  
25 someone's pregnant, we're not going to deny them of

1           having a baby, we're going to put them in the  
2           system. So do you still require then that your  
3           PCPs call you and get some type of notification  
4           from you guys?

5                   MS. BARRABER:   (Nods.)

6                   MR. YODER:   Okay. I just wanted to clarify  
7           that.

8                   MS. BARRABER:   That's one of them that is  
9           probably medically necessary that they have the  
10          baby. It's never going to be turned down.

11                   MS. KORTY:   And just for the purposes of the  
12          record, can you say yes or no instead of the uh-huh  
13          or uh-uh?

14                   MS. BARRABER:   Yes.

15                   MS. STONECIPHER:   A question in regards to  
16          your concerns about it's very hard to manage which  
17          health plans require which items to be  
18          precertified. It's very hard to stay on top of,  
19          you can go to the website, you can get the  
20          information, but you're going to have to go there  
21          every time when these situations come up.

22                   Is there an opportunity to somehow  
23          standardize or at least come to an agreement as to  
24          what needs to be -- I know that's a far-fetched --

25                   CHIEF DEPUTY CUTTER:   I think that's the

1 purpose of this exchange, honestly, is to see if  
2 there is that opportunity for us to do that.

3 MS. STONECIPHER: And which company requires  
4 what and why.

5 CHIEF DEPUTY CUTTER: Absolutely. And I  
6 think it goes to the doctor's comments. You know,  
7 the cost is there regardless of where it pops up.  
8 And so if there is any opportunity for us to  
9 eliminate that reasonably, we would certainly want  
10 to visit that.

11 MS. BARRABER: I do think it's important to  
12 remember that not all of the business is insured  
13 business.

14 CHIEF DEPUTY CUTTER: That's true.

15 MS. BARRABER: That when it's under ERISA,  
16 we can put that policy and procedures in place, but  
17 it's not going to cover that business, so you're  
18 still -- you're potentially setting up a separate  
19 process, so it doesn't necessarily follow those  
20 guidelines.

21 CHIEF DEPUTY CUTTER: That is true. That is  
22 very -- and I don't know how many of the providers  
23 that are in the room with us today that have that  
24 knowledge. But in Indiana probably somewhere 60 to  
25 70 percent of the people who have group health

1 insurance are covered under self-funded plans that  
2 are not under state regulation, they're under  
3 federal regulation.

4 So one of the prime examples of that is the  
5 H-24 thing that's popped up. And thank you all for  
6 not bringing that up today.

7 MR. YODER: Now that you did...

8 (Laughter.)

9 CHIEF DEPUTY CUTTER: I've about had it up  
10 to here with H-24.

11 But at any rate, yeah, that's an important  
12 point, because the self-funded program can design  
13 whatever parameters they want to put together in  
14 terms of what hoops you have to jump through.

15 MR. YODER: Can I ask a general question to  
16 the providers?

17 CHIEF DEPUTY CUTTER: Sure.

18 MR. YODER: I don't know this answer. But  
19 do you find that your policies, your plans, this  
20 payer may require different things precertified and  
21 preauthorized as opposed to this other company? Do  
22 you find that, for example, not to pick on Anthem,  
23 but I'll use you as an example --

24 MS. BARRABER: We're used to it.

25 MR. YODER: Does Anthem have one set of one

1 list of all of the things needs preauthorized, all  
2 those things that need precertified, or does it  
3 depend on your payer, your company that's paying  
4 the bill?

5 MS. BARRABER: We're the payer. So our  
6 insured business that's governed, yes, we have one  
7 list. And I will tell you I get requests weekly  
8 from salespeople, we want to the make an exception  
9 for this. And I do my darnedest to turn it down  
10 because there's a reason we want it to be  
11 consistent.

12 Now, when you get to national business, and  
13 most of that is ASO, we try to steer them to the  
14 same list. But they're paying the bill.

15 MR. YODER: You do your best, obviously, but  
16 you can only do so much. So you do have different  
17 criteria depending on --

18 MS. BARRABER: By those accounts.

19 MR. YODER: -- those accounts.

20 MS. BARRABER: Yes.

21 MR. YODER: That's just another thing that I  
22 think -- and Anthem is not alone in this, from my  
23 understanding -- that's just another thing that  
24 makes it more difficult for us as providers,  
25 because even within the same carrier, the same

1 insurance company, their requirements are different  
2 depending up the plan.

3 MS. MALOOLEY: The employer.

4 CHIEF DEPUTY CUTTER: Now, to go back to her  
5 comment, what she was saying was: If it's a fully  
6 insured plan that we have the ability to regulate,  
7 it's the same across the board. But if you go to  
8 this self-funded plan or this self-funded plan,  
9 those parameters could change.

10 MS. BARRABER: That's right.

11 CHIEF DEPUTY CUTTER: And unfortunately,  
12 this department of this state has no opportunity to  
13 standardize that.

14 MR. YODER: It's just an idea.

15 CHIEF DEPUTY CUTTER: Absolutely.

16 MR. YODER: When we're talking about  
17 bringing things under one umbrella, maybe the  
18 department could do the website that the providers  
19 of the plans could participate in that we could go  
20 there and we could look up in one centralized  
21 location, based on this plan this is what has to be  
22 percerted. I don't know if that's too big of a  
23 bite to take.

24 CHIEF DEPUTY CUTTER: We have to think of  
25 everything.

1 MS. BARRABER: If you use, for example, and  
2 I'm certainly not saying we have this, but if we  
3 have 500 national customers, we need to have 500  
4 different plans. And that's where it gets --  
5 General Motors is a prime example. Their hourly  
6 people have one requirement and their salary folks  
7 have another. And you would think UAW Ford would  
8 be the same. Oh, now it could be something totally  
9 different. Which I totally agree, it's very  
10 cumbersome and very...

11 MR. YODER: And I understand from the  
12 business standpoint you're trying to sell policies,  
13 you want to adapt to the customers' needs. I  
14 understand that. From a provider's standpoint, it  
15 is a nightmare trying to know what needs a precert  
16 and what doesn't. And it does, it adds staff.

17 CHIEF DEPUTY CUTTER: No question.

18 MR. YODER: We are hiring staff because we  
19 have to. As a matter of fact, I just hired  
20 somebody starting this week to help with precerts  
21 and prior auths. Somebody without all of this, we  
22 would be able to save costs.

23 MS. KORTY: I want to make sure that you  
24 understand, it's not just that they want to meet  
25 the needs of Ford or whomever. If the State passes

1 the law that says --

2 MR. YODER: I understand. Some things are  
3 outside the State's control.

4 MS. BARRABER: And it's the majority of the  
5 business in Indiana, unfortunately. It's at least  
6 70 percent of our business.

7 MS. KORTY: I'll get right back to you.

8 We've heard a lot at this point from the  
9 carriers and from the providers and we sort of  
10 promised in our agenda that we would let some  
11 others talk. Is there anyone here representing a  
12 legislator's office that wants to pipe in on this  
13 issue?

14 CHIEF DEPUTY CUTTER: A consumer advocacy  
15 group?

16 MR. CATTELL: The State Medical Association,  
17 Dr. Patterson, and Lori have been speaking from our  
18 perspective.

19 MS. KORTY: Where is that sign-up sheet?

20 DR. PATTERSON: I'm just wondering, and  
21 there have been some good comments here, because  
22 there's a large disparity in what the plans do and  
23 because we're trying to practice evidence-based  
24 medicine, why don't we let the science drive what's  
25 on the list and have a common list as opposed to

1 everyone picking and choosing? It doesn't make any  
2 scientific sense. It's makes business sense, but  
3 we're talking about medicine here.

4 So if we know which procedure from the best  
5 practice standpoint should be precertified, which  
6 ones are high risk of being abused and not, why  
7 don't we use evidence here to drive our decisions  
8 instead of people and companies picking and  
9 choosing what they want on their list and making  
10 500 different lists?

11 CHIEF DEPUTY CUTTER: Why don't you give us  
12 a list? That would be very helpful, seriously. On  
13 the bottom of the agenda I have my e-mail address  
14 on there and my business cards are over here on the  
15 table. We would appreciate any input like that  
16 that you're willing to provide as we're pulling  
17 this process that we're sure that we consider all  
18 those kinds of issues.

19 DR. PATTERSON: I think the way that would  
20 work is the providers and the insurance companies  
21 would sit down across the table and say, okay,  
22 what's the rationale or what can we agree what  
23 should be on the list. For example, some of our  
24 bariatric surgeries, very good example. We can all  
25 bring up and we can all think of examples where

1 someone has the medical means to try to lose weight  
2 before we go to bariatric surgery. We'd probably  
3 agree on that, so that should be on the list.  
4 There's some good scientific evidence.

5 But going around doctor to doctor is not  
6 going to be good sense there. We need to have  
7 providers and insurance carriers there together  
8 talking across the table getting that list  
9 together.

10 MS. MALOOLEY: But isn't evidence-based  
11 medicine at this point, while we're trying to  
12 develop the quality standards, okay, very much  
13 based at this particular point on the specialty  
14 organizations developing theirs and there are some  
15 employer coalitions, National Business Groups on  
16 Health, Leapfrog, et cetera, et cetera, we are  
17 developing those criteria to be able to produce the  
18 quality and then judge the outcomes for  
19 evidence-based medicine.

20 So I'm not sure it's just a conversation  
21 between what the provider and the physician would  
22 determine to be --

23 DR. PATTERSON: Except the physicians and  
24 the providers both have those recommendations from  
25 those quality organizations.

1 MS. MALOOLEY: I would think that the  
2 department would want those protocols followed.

3 DR. PATTERSON: Sure. Right. But there's  
4 like 160 recommendations by the American Society  
5 for Quality for evidence-based guidelines on what  
6 the policy will pay for the performance. So you  
7 would think you could look at those quality  
8 recommendations that are given for pay for  
9 performance and then based on those decide, okay,  
10 which things are we going to have to precertify or  
11 not based on those guidelines of good practice  
12 instead of somebody picking off of a list.

13 MS. MALOOLEY: I would strongly recommend  
14 that we do the AQA, things like that.

15 DR. PATTERSON: Right.

16 CHIEF DEPUTY CUTTER: Yes, Holly?

17 MS. KING: I want to say in response to  
18 that, though, you know, M-Plan working with the  
19 provider network so we have, you know, like you  
20 guys talked about, St. Francis and Methodist, so  
21 these are global organizations that include all  
22 kinds of physicians and providers. And, as I said,  
23 we leave it up to each one of those individual  
24 provider networks what they want to precertify and  
25 how they want to do it and what they need a

1 referral for and what they don't, and they're all  
2 different.

3 So I think, like you said, getting consensus  
4 is not very realistic.

5 MS. MALOOLEY: But on the other hand, going  
6 through the Leapfrog standards, for example, with  
7 M-Plan, okay, it's more difficult for an HMO to  
8 follow those than we are a carrier that does  
9 insured and self-insured non-HMO plans. So we may  
10 have to divide the type of plan.

11 CHIEF DEPUTY CUTTER: Any other comments?

12 DR. PATTERSON: I think one of the other  
13 comments, it's interesting to me that we've been  
14 able to get together as a group between physicians  
15 and providers who agree upon a common application  
16 for physicians that is on the web --

17 MR. YODER: CAQH?

18 DR. PATTERSON: Yes -- CAQH. That's been a  
19 long time, a lot of effort, but we were able to  
20 agree on what to put in that application to  
21 potential physicians, and it's been a huge success.  
22 I think it saves providers money, it saves  
23 physicians money and time. Why can't we do the  
24 same with standards?

25 CHIEF DEPUTY CUTTER: We're hoping to move

1 in that direction.

2 DR. PATTERSON: It is standardization. We  
3 need to standardize.

4 CHIEF DEPUTY CUTTER: We're hoping that this  
5 has the opportunity to do that in some manner.

6 MS. MALOOLEY: Providers that are in the  
7 room, are you all signed up to participate in the  
8 Medicare quality requirements for your performance  
9 using the new G codes to be able to be paid the  
10 extra 1.5 percent?

11 MR. YODER: No.

12 MS. MALOOLEY: So you're not even  
13 participating in that?

14 MR. YODER: No, because of the added work.  
15 The added documentation does not cover the added  
16 reimbursement.

17 DR. PATTERSON: Bingo.

18 MR. CATTELL: In fact, the money for that  
19 Medicare trial will be not available next year. So  
20 those that are volunteering now are starting to  
21 find out that continuing volunteering are not going  
22 to get them anything.

23 MS. MALOOLEY: Really? Okay.

24 MR. YODER: We have another practice that  
25 I'm aware of who has been participating. And for

1 the last two weeks -- it's a struggle they've been  
2 having for the last two weeks where their claims  
3 have not been going through. It goes to a  
4 clearinghouse. When we send claims electronically,  
5 typically we send them to a clearinghouse who then  
6 forwards them on to the various insurance  
7 companies. Their claims are being rejected at the  
8 clearinghouse because their clearinghouse is not  
9 set up to receive.

10 MS. MALOOLEY: Well, they've also, I believe  
11 that CMS has also helped the claims at this point  
12 in time. But did you except anything more?

13 MR. YODER: The added benefit of revenue  
14 does not offset the added documentation costs.

15 MS. MALOOLEY: I would believe that.

16 MS. KORTY: I'm interested in turnaround  
17 times. What did the carriers -- what kind of a  
18 time frame do you require for a request for  
19 preauthorization, depending on whether it's  
20 emergent or nonemergent, that type of thing, what  
21 is your turnaround average time?

22 CHIEF DEPUTY CUTTER: Let's say nonemergent  
23 because that's probably more prevalent.

24 MS. CUTTER: And we'll have that  
25 information.

1 MS. DORAN: Well, just by the nature of  
2 those being preauthorization, it's prior to the  
3 service. If somebody, obviously, goes inpatient  
4 over the weekend, we just require 24 hours within  
5 the first working day. If it's a holiday, it's 24  
6 hours after that. Most of the intakes at the  
7 hospital are set up and they just fax that  
8 information directly to us. So they do it via the  
9 web, so there's very little interaction.

10 From the physician's side, mainly it's they  
11 have the patient in the office and they want to,  
12 you know, nonemergent they want to have something  
13 done that requires the preauthorization, they'll  
14 contact us right then and there. And we might be a  
15 little bit unique, but our preauthorizations are  
16 done with our personal staff, our nurses. So all  
17 of the questions can be answered right then, but  
18 it's a pretty routine process.

19 So I don't know that we measure anything  
20 that we have turnaround times that are required  
21 from the providers. It's more a service issue than  
22 anything else. The patient is there, they don't  
23 want to see them again if they don't have to just  
24 for paperwork. So we turn it around right then and  
25 there.

1 CHIEF DEPUTY CUTTER: Anybody else?

2 MS. BARRABER: Ours is a very similar  
3 process.

4 CHIEF DEPUTY CUTTER: Is it?

5 MS. BARRABER: If they go in, the hospital  
6 calls after the fact in 24 hours, they can track  
7 it. It can be done while the patient's in the  
8 office. Or if the patient doesn't want to wait,  
9 they can elect to have it.

10 MS. KORTY: What about say some GYN service  
11 where it doesn't need to be done right there at the  
12 time, but it's a question of maybe medical  
13 necessity? Is that a two-week turnaround? Is that  
14 a do-it-on-the-phone thing?

15 MS. BARRABER: Either way. They can do it  
16 on the phone and have it done right then or they  
17 can send it in and then it's probably seven- to  
18 fourteen-day turnaround. But again, that would  
19 only be inpatient for us. Outpatient it's not  
20 required.

21 CHIEF DEPUTY CUTTER: Other comments?

22 MR. YODER: I have a general question again  
23 for the insurance companies. And again, I haven't  
24 a clue to the answer.

25 But as primary care docs, we have to get

1           precert for. And I'm going to use the CT as an  
2           example. Do ERs and hospitals have to get precerts  
3           for that? I understand if it's emergent, they'll  
4           go ahead and do it and they can get it after the  
5           fact. But is it required of ERs to get precerts  
6           for those types of procedures as well?

7           MS. BARRABER: The hospital does it.

8           MR. YODER: Okay. So the hospital will  
9           actually have to do it?

10          MS. BARRABER: It will go through the system  
11          without it. We're not going to deny that. But if  
12          it's questionable, they'll call in afterwards.  
13          They don't have to.

14          MR. YODER: So even if the hospital decides,  
15          you know what, it's not cost effective for us to go  
16          ahead and get this precert, we're just going to  
17          submit the claim anyway.

18          MS. BARRABER: As long as it meets the  
19          emergency definition, it will go through, yes.

20          MR. YODER: And how is that determined? Is  
21          it based because it comes out of the ER or based on  
22          -- how is it determined that it meets the emergency  
23          definition?

24          MS. BARRABER: Well, it's based on  
25          diagnosis. And then if it's questionable, then we

1 might ask for records. But under the prudent  
2 layperson definition, it's pretty much --

3 MS. MALOOLEY: It covers it.

4 MR. YODER: Well, I guess what I'm wondering  
5 as a PCP here -- forgive me, I'm fishing -- I'm  
6 wondering as a PCP, if we are making that emergent  
7 medical necessity call, do we then simply -- well,  
8 we don't have to submit the claim because we're not  
9 the ones being billed for it. Again, we're running  
10 into the problem that the hospital won't schedule  
11 without it.

12 So maybe we just need to talk afterwards and  
13 see if we can get something to the hospital and say  
14 go ahead and schedule it with these doctors.

15 MS. BARRABER: Well, obviously, you're going  
16 to have the medical necessity information. They're  
17 not going to have it. That is why we ask the  
18 physician that's referring them over to call us for  
19 that.

20 MS. KORTY: Is there anyone here from the  
21 hospital association?

22 MS. HALBIG: Obviously, we're not PCP  
23 doctors in the fact that we can spread out some of  
24 our administrative costs. But again, anything we  
25 can help with the standardization would be

1           beneficial in lowering our costs as well. You  
2           know, it's an issue that as we keep talking about  
3           this we'll take back to our members. Any specific  
4           questions that we need to take back to our members,  
5           we're happy to do that. If we need to bring  
6           someone in and give you specifics, we can do that  
7           also.

8                   CHIEF DEPUTY CUTTER: Yes, David.

9                   DR. PATTERSON: I was just thinking about  
10           something.

11                   Instead of imposing a regulation for all  
12           physicians for preauthorizations and  
13           precertification, why can't the provider -- this is  
14           a question for the providers now -- why can't the  
15           providers monitor the system for sentinel events  
16           like a specialist or a primary care physician who  
17           is overutilizing something and confront that person  
18           and review their charts and do it that way as  
19           opposed to imposing regulations across the whole  
20           system?

21                   MS. MALOOLEY: Peer review?

22                   DR. PATTERSON: Whatever you want to call it.  
23           But, you know, if you have someone who's  
24           overutilizing a CT scanner, let's say bought a CT  
25           scanner and now they're ordering more CTs and

1           you're questioning that as a provider, as well you  
2           should, instead of giving preauthorization for  
3           everyone, for every provider, why can't you --

4                   MS. MALOOLEY: Oh, for that particular  
5           overutilizer?

6                   DR. PATTERSON: -- confront them the  
7           individual provider and say, look we respect you're  
8           a physician, but look and review those and see  
9           what's been done correctly and what's not. That  
10          would be a much less -- it seems to me would it  
11          would save both sides money. It's costing them a  
12          lot of money, it's costing us a lot of money. I  
13          understand what you're trying to track. You're  
14          trying to track overutilizing. No one would argue  
15          with that. It's the way we're doing it that's  
16          costing everyone a lot of money.

17                  MS. MALOOLEY: Do you as carriers track high  
18          utilizers? Do you have like a little red flag so  
19          that when they order something you know who to look  
20          at? Or where you know that also you have very  
21          high-performing physicians that you really don't  
22          have to question? It's a good point.

23                  MS. DORAN: Yes. We track -- we call them  
24          our outliers.

25                  MS. MALOOLEY: Outliers?

1 MS. DORAN: Yes. You see it in narcotic  
2 prescriptions. You see it in the flat films verses  
3 the CT films. Phil can address probably more, we  
4 do have a peer review committee. I think there is  
5 some reluctance, especially in the microclimate  
6 within the state of the medical associations, if  
7 you will, every section of the state seems to have  
8 their own little climate on how the doctors  
9 interact with each other.

10 I think you have some success there. And I  
11 don't know what other health plans do, but that's  
12 certainly a forefront for us that if we have an  
13 outlying provider that seems to be outside of the  
14 norm in both his practice, his outcomes, what he  
15 prescribes, or what tests he runs, and certainly  
16 the claims that he submits, that he is brought  
17 before our peer review both just as a case and  
18 maybe eventually in person. And I think we have  
19 success with that.

20 You do have some drawbacks with that,  
21 though. Because you always have to be careful of  
22 the perception of practicing medicine.

23 MR. BLINE: If I understand Dr. Patterson's  
24 suggestions, I think he's advocating that in lieu  
25 of precertification, it's sort of like closing the

1 barn door after the horses are out. I mean, until  
2 you see a pattern that might be developing, but how  
3 that pattern's developing, a lot of costs for  
4 essentially unnecessary procedures have been run up  
5 and paid by the carrier. And I don't know what  
6 type of system should be put in place to identify  
7 that quickly enough and not at the provider level.

8 MS. MALOOLEY: How many years of practice  
9 would you suggest that you track a provider before  
10 you don't require authorization because of the way  
11 he practices medicine?

12 MR. YODER: That would be another way to  
13 address it, is have prior authorization for X  
14 number of years as a participating provider. And  
15 if you see your pattern, say, you know what, we  
16 trust this doc, he's doing a good job, we'll back  
17 off and not require the prior authorization. Still  
18 maintain the data, still watch for flags for the  
19 outliers.

20 MS. HART: And Arnett Health Plan actually  
21 has done that in some of the nephrologists,  
22 neurologists, some of those highly-specialized  
23 doctors. They don't have to do prior  
24 authorizations because they're not overutilizing  
25 those services. There's not anything to

1 overutilize in those arenas. So absolutely, I do  
2 think it works. But again, we need a good system  
3 and a standardized system is the difficulty we run  
4 into.

5 CHIEF DEPUTY CUTTER: Any other comments?

6 All good information. I think we have  
7 covered everything that the three of us have been  
8 able to think of, and you guys have certainly given  
9 us some other things to think about too.

10 MR. YODER: If I may, there is one prior  
11 authorization issue that we haven't discussed, and  
12 that is medications. And I don't know if now is  
13 the time to bring that up and discuss that as well.

14 CHIEF DEPUTY CUTTER: Absolutely.

15 MR. YODER: As providers one of the problems  
16 that we face are formularies. Formularies being  
17 those preferred medicines that our insurance  
18 companies prefer our patients try first, be it  
19 first year, second year, third year. Those  
20 formularies from our perspective seem to change  
21 frequently, and it's very difficult for us as  
22 providers to know which formulary this patient is  
23 on. So our doctors prescribe based on their  
24 preferences, what they see anecdotally as their  
25 best outcomes, and they will change based on the

1 patient's response to that medication.

2           Unfortunately, sometimes what happens is we  
3 get a patient established on a certain protocol and  
4 it fits fine with the formulary. The company may  
5 change insurance companies, they may change plans,  
6 they may change formularies at the insurance  
7 company, and it no longer meets the criteria.

8           So we get a letter sent such as this that  
9 says your patient is on Nexium. We want you to try  
10 one of these other drugs first. And we have to go  
11 through and we have to open the medical records, we  
12 have to fill out the information, fax it back in.  
13 And again, it just adds time and it adds cost when  
14 we have a patient on an existing protocol.

15           So this is not a situation where we're  
16 starting a patient onto a new protocol, but it's a  
17 patient who is on a protocol that is working, is  
18 functional for a patient. So again, that's just an  
19 issue that we have. I don't know how best to  
20 handle that.

21           CHIEF DEPUTY CUTTER: And that's becoming a  
22 larger issue just because of the types of  
23 medications that are available now and how  
24 effective a lot of them are in the different health  
25 conditions that people have. I think you guys have

1 much more opportunity to help control issues with  
2 patients with medications.

3 DR. PATTERSON: I think the best way to  
4 stall that is standardization. If as providers we  
5 had one place to go on the web, say for Anthem or  
6 M-plan or Sagamore or Arnett, instead of what PPIs  
7 you preferred, we could do that. But the patient's  
8 card doesn't really say it. The patient has no  
9 idea. So we have to guess and we frequently guess  
10 wrong, and that generates the paperwork that  
11 Mr. Yoder's talking about that costs us time and  
12 money.

13 MR. YODER: If I may, even then as a  
14 provider when you're seeing patients you don't have  
15 time to go on the web and say, okay, now, this is a  
16 Cigna patient, what is his protocol, what formulary  
17 do I need to follow for this patient? We don't  
18 have time for that. You have so many. You have a  
19 Cigna, you have an M-Plan, you have a United Health  
20 Care patient. You have so many different patients  
21 through so many different carriers, you don't have  
22 time to track that as a practicing provider.

23 Now, a lot of times what we will do as a  
24 doctor, again, the first time, and it's not a  
25 problem, we will prescribe -- the doctor will

1           prescribe what he or she feels is best or has had  
2           best success with. The patient then will go to the  
3           pharmacist, try to fill that, the pharmacist will  
4           call our office and say, you know what, this is not  
5           on the formulary. Can we substitute? And if it's  
6           a first-time application, yes, absolutely, it's not  
7           a problem. We're happy to try and help the  
8           insurance company and work with the insurance  
9           company.

10                   But if we have already tried it, if we have  
11           already gone through the other medications and we  
12           really want the patient to be on Nexium, then at  
13           that point we have to fill out the paperwork, send  
14           the paperwork in, and go through the process, make  
15           the phone call, go online, go through the process  
16           to get the prior authorization. And it just,  
17           again, takes time and adds cost to the whole cost  
18           of the whole delivery of the medicine and health  
19           care.

20                   MS. MALOOLEY: Well, with the plan design,  
21           for instance with the State, we have four levels,  
22           four tiers. And if you want something  
23           nonformulary, you just pay.

24                   MR. YODER: But out patients -- we have  
25           customer relations as well.

1 MS. HART: That doesn't go over very well.

2 MR. YODER: That doesn't go over well with  
3 our customers, our patients.

4 MS. MALOOLEY: But even if you get it  
5 approved, if you get the Nexium approved, they're  
6 still going to pay for all formularies.

7 MS. HART: I'm going to speak to a couple of  
8 obligations that I see in employer groups and  
9 carriers having to help you out. I think as the  
10 entire employer moves to a new carrier, I think the  
11 two carriers have the obligation to share  
12 information, to not set you up to fail. If he's  
13 already on Nexium, let's get the approval in the  
14 system before the group even starts to be active,  
15 and hopefully the employer signs up at that time to  
16 get that information.

17 And then, two, if you have somebody who is  
18 new to a plan that changes jobs, not the entire  
19 employer group, maybe facilitating that first line  
20 of communication so you're not stuck in the office  
21 or the pharmacist is confronted with that situation  
22 where no one's happy, and all you want to do is  
23 make sure that person doesn't have heartburn.

24 CHIEF DEPUTY CUTTER: That's a wonderful  
25 concept, but in the real world --

1 MS. HART: In the real world, exactly.

2 CHIEF DEPUTY CUTTER: -- that's probably not  
3 going to happen, because most employers get their  
4 group plans a month or two after the other one was  
5 replaced. And, you know, the poor employees are  
6 just screaming because they don't have their ID  
7 cards yet and the employer is ready to shoot the  
8 broker because, you know... so it's a wonderful  
9 thought, but the likelihood is --

10 MS. HART: I agree. It's an opportunity.

11 CHIEF DEPUTY CUTTER: I don't assume that's  
12 ever going to happen. Yes, Doctor?

13 DR. PATTERSON: We're about to address the  
14 issue with electronic medical records. We are  
15 about to beta test the prescribing module update to  
16 look at a patient's formulary which is updated  
17 daily so this issue will go away. But, you know,  
18 only about 20 percent of physicians have EMR, and  
19 those who have electronic prescribing modules up to  
20 date it's much less.

21 So it will be standard technology  
22 eventually, but we're years away from that. Who is  
23 going to pay for the EMR and the prescribing  
24 module? That's the problem.

25 CHIEF DEPUTY CUTTER: But it's wonderful to

1 know that that opportunity is there.

2 I had an experience probably a year and a  
3 half ago where I ended up in a hospital in Chicago  
4 at the University Hospital, no less. I mean, these  
5 guys are supposed to be really good. I go into the  
6 hospital at three o'clock in the morning. And, you  
7 know, fortunately in my opinion I'm a very good  
8 patient. I know everything that's wrong with me.  
9 I carry my little medication card so they can just  
10 read it, you know. It's got all the dosages and  
11 all that sort of thing. So I'm pretty up on what  
12 the issues are or what we maybe should be thinking  
13 about.

14 So they take all of the medical history and  
15 all this, and this guy sitting in the cubicle  
16 writing all this stuff down on this piece of paper.  
17 And they run some tests and ultimately it turns  
18 out, you know, I've got low potassium because I  
19 take a couple of diuretics and I'm just ready to  
20 fall over. So they're going to do the  
21 right-in-the-arm thing with the potassium.

22 They later decide that even though they're  
23 going to do that, because they don't know me and  
24 I'd never been there before, I don't even live in  
25 Chicago, they don't want to let me go. So they're

1 going to keep me overnight just to be sure I don't  
2 die when they give me the potassium.

3 So they ultimately in the middle of the  
4 afternoon bring in somebody else to take the same  
5 medical information because the guy who took it in  
6 the morning is probably carrying it around with  
7 him, you know. It didn't go into any computerized  
8 process. I finally get transferred to a room about  
9 seven o'clock that night and in this room there is  
10 a counter with a laptop computer on it that nobody  
11 ever touches. I have to put a towel over it  
12 because the light is so bright it keeps me awake,  
13 just so I can try to go to sleep.

14 Now, I am in a bed that Hillenbrand sold to  
15 this hospital that makes this god-awful noise that  
16 sounds like a motor running about 1500 RPMs, so  
17 there's no way you're going to sleep because it  
18 comes on about every 40 minutes. Now, they think  
19 that this bed is high tech and yet they've got this  
20 laptop over here that nobody's every used.

21 The night nurse comes in and she says, "I  
22 have your medication."

23 I say, "Really? What is it?"

24 She looks to see -- it's so-and-so. I said,  
25 "I don't take that."

1                   She said, "Well, I'm sure you do."

2                   I said, "Why do you think I'm in here?"

3                   She whips out this, I swear to God, this  
4                   little piece of paper that's like this big and it's  
5                   wadded up and she's scribbled all over it and she  
6                   said, well, they said that you blah-blah-blah.

7                   I said, "No, I don't have any of those  
8                   things. Let me tell you what I do have."

9                   "Oh," she says and she leaves the room with  
10                  the medication and never comes back.

11                  So, you know, the next morning it's chaos  
12                  just trying to get out of there because nobody has  
13                  a clue, first of all, why I'm there, and secondly,  
14                  you know, what the purpose of this whole thing was.  
15                  And that to me is a perfect example of why  
16                  electronic medical records are critical before  
17                  we're ever going to change any of this stuff,  
18                  before we're ever going to keep costs down.

19                  I mean, we can do, like you said, all the  
20                  cost-shifting we want to do. But ultimately it's  
21                  not going to go away unless each segment -- and  
22                  all of us contribute to this. I mean, I've been in  
23                  this goofy business for 40 years, and I've got to  
24                  tell you, shame on the insurance companies. When  
25                  my kids were born we had a \$300 deductible. You

1           paid that before you ever -- before the insurance  
2           company ever paid a dime. Well, my daughter only  
3           cost like \$200. Now, that really ages me, doesn't  
4           it? I should have made other numbers. Anyway,  
5           that didn't surprise me. I expected that.

6                     And then the insurance company says, you  
7           know what, let's give them a co-pay and then they  
8           don't have to pay this deductible and then we'll  
9           sell more policies. Shame on us. And we have  
10          created this god-awful mentality of I'm entitled to  
11          this. I mean, I had this raging argument with our  
12          general counsel last week about whether health  
13          insurance is a privilege or a right. And it's that  
14          bad out there, it really is. We've all contributed  
15          to it, so shame on us.

16                    There are no easy solutions, you know,  
17          there's unfortunately no easy solutions. Because  
18          if there was, he would have thought of it by now.

19                   MS. MALOOLEY: He wouldn't be sitting here.

20                   CHIEF DEPUTY CUTTER: We wouldn't even be  
21          having this conversation.

22                    So we really appreciate all of the input.  
23          We're going to have two more public meetings, one  
24          in August and one in September. And hopefully you  
25          guys can -- do we have the dates for those?

1 MS. KORTY: The next one is August 22nd.  
2 It's here in the Government Center South, but we're  
3 in a different room. We're in Conference Center  
4 Room C.

5 CHIEF DEPUTY CUTTER: Full ventilation will  
6 be provided.

7 We'll continue with this and we will also  
8 move to some of those other issues that the  
9 department was taxed with. And during the interim,  
10 please give to us any comments, ideas,  
11 suggestions.

12 MS. KORTY: Data.

13 MS. MALOOLEY: Research data.

14 CHIEF DEPUTY CUTTER: Absolutely. Any of  
15 the information that you guys have in terms of  
16 denials, how many were there, how many precerts you  
17 do in a year, how many denials, what were they for,  
18 that kind of thing. Any of that will be helpful.

19 Yes, Elizabeth?

20 MS. EICHHORN: So basically will your final  
21 report just be a compilation of the discussion here  
22 or your recommendations?

23 CHIEF DEPUTY CUTTER: The way the bill is  
24 phrased, it asks us to make recommendations for  
25 standardization or some other process. So I think

1 ultimately they're going to expect some level of  
2 that from us. And that's why we want to gather as  
3 much information as we can, because we just see  
4 different pieces of it and it really will help us  
5 to understand what the whole process is.

6 MR. YODER: If I may again, I think this is  
7 actually a good setting for me. I've learned a  
8 little bit listening to the insurance industry as  
9 well as far as why they do things the way they do.  
10 And hopefully you've understood our perspective a  
11 little bit as well.

12 CHIEF DEPUTY CUTTER: Absolutely.

13 MR. YODER: Is there going to be an  
14 opportunity for us to get a copy of the minutes  
15 e-mailed to us or sent to us or forwarded to us?  
16 How does that work?

17 CHIEF DEPUTY CUTTER: We don't know yet what  
18 the distribution process will be. But that's why  
19 we had her here, because we wanted to be sure that  
20 we captured everything. We will have a court  
21 reporter at each of the meetings.

22 MS. KORTY: If you want a copy of the  
23 transcript, why don't you contact Carol and we'll  
24 figure out where to go from there.

25 CHIEF DEPUTY CUTTER: Just e-mail me at the

1 e-mail address that's on the agenda and tell me  
2 that you want it and we'll just blast it to  
3 everybody that wants a copy of it.

4 Well, you've probably been sweating long  
5 enough. We'll let you get out of here. Thank you  
6 very much for coming. We appreciate it.

STATE OF INDIANA )

) SS:

COUNTY OF JOHNSON )

I, Sherri L. Sego, Notary Public in and for Johnson County, Indiana, do hereby certify that the aforementioned meeting was taken on behalf of the Department of Insurance at the time and place heretofore mentioned with attendees present as noted;

That the meeting was taken down by means of stenographic notes, reduced to typewriting under my direction and is a true record of the meeting;

I do further certify that I am a disinterested person in this cause of action; that I am not a relative or attorney of any of the parties or otherwise interested in the events of this action and am not in the employ of the respective parties.

IN WITNESS WHEREOF, I have hereunto set my  
hand and affixed my notarial seal this 6th day  
of August, 2007.

A handwritten signature in dark ink, appearing to read 'Sherri L. Sego', is written over a horizontal line.

Sherri L. Sego,  
Notary Public  
Residing in Johnson County

My Commission Expires:  
June 1, 2008

P R O C E E D I N G S

HEARING OFFICER CUTTER: If you'll take your seat, we're going to get started. Thank you.

We're going to pass around these sign-up sheets, because we need everybody to sign in and put your name and your contact information because the court reporter will be taking a record of this meeting, just like we did at the last one, and that way she'll have your name to refer to and do correct spelling and that sort of thing; so be sure and do it legibly please, so we can read it and so that she can read it as well.

Did everybody get an agenda? They're up here in the corner of the room as you come in down that first aisle.

My name is Carol Cutter, I'm the Chief Deputy of Health and Legislative Affairs for the Department of Insurance. Thank you all for coming today. We're tickled to death to see a crowd either equally as large as our last one or maybe even larger, and we hope to have the same really good exchange that we had the last time as well.

1                   As you know if you were here at the last  
2                   meeting, we did have the court reporter do the  
3                   actual finished project of the meeting that  
4                   afternoon, and I told several of you or I think we  
5                   told you as a group that we would make this  
6                   available if you wanted a copy of it. We've had  
7                   several people ask. One thing I didn't know when  
8                   I made that statement, since this is a court  
9                   reporter process, there is a charge for this. It  
10                  is not free. Even the Department can't provide  
11                  it, I mean we can't copy this and give it to you  
12                  or anything.

13                 If you want one of these from the last  
14                 meeting, you're welcome to it. Go ahead and  
15                 either contact me or Tina with that request and  
16                 we'll pass that on to the agency that provided  
17                 this. We think that it would be about \$100, FYI,  
18                 and it's based on the amount of time that they  
19                 spend actually taking the notes during the  
20                 meeting, so it's a time issue. I wanted to get  
21                 that out of the way right of way.

22                 I'm going to go ahead and introduce the  
23                 folks who are up here with me, since I was so rude

1 and forgot them the last time until about 20  
2 minutes into the session.

3 To my right here is Tina Korty, who is  
4 from our Legal Division at the Department of  
5 Insurance. One of our very good attorneys who  
6 deals a lot with medical malpractice issues, so  
7 this is a topic that she can certainly relate to.

8 To my left is Jerry Malooley, who many of  
9 you already know who has a very long background in  
10 health related issues, worked with the State  
11 Chamber of Commerce on health issues for many  
12 years, and is currently working on health policy  
13 at the State Personnel Office.

14 We are thrilled to have both of these  
15 ladies here today because they can really add a  
16 lot to the conversation, as they did in our last  
17 meeting.

18 The information on the agenda, I do want  
19 to just go back over quickly the topics that  
20 Senate Bill 372 stipulated that we were supposed  
21 to look at. The main topic, of course, is  
22 preauthorization or precertification procedures,  
23 and, then, if we have time we'll address the other

1 issues. I think again the Legislation was  
2 probably focused on some sort of standardization  
3 in terms of explanation of benefit forms, ID  
4 cards, questions regarding the timeliness of  
5 filing of claims by providers to insurers and  
6 HMOs, and then lastly what kind of format or  
7 timeline would there be for notification to an  
8 out-of-network provider for reimbursement rates on  
9 a preauthorized service or treatment by that  
10 insurer or HMO.

11 So it's a pretty broad range, and I don't  
12 think necessarily that they expect us to come up  
13 with wonderful answers in all those categories,  
14 but certainly the preauthorization and  
15 precertification was the main issue.

16 We had some very good comments at our last  
17 meeting from the HMO world, from the insurer world  
18 and certainly from the provider world. We're very  
19 fortunate today to have even more folks, I think,  
20 from the provider world with us who can give us  
21 some other parts of this issue that maybe we  
22 didn't pull out of our last exchange. So we're  
23 glad to have that input today and hoping that we

1 can again, you know, collect as much understanding  
2 and information about this topic as possible.

3 One of the other issues that popped out,  
4 pretty significantly in the exchange that we had  
5 last month was, there seems to be a clear  
6 delineation between the preauthorization,  
7 precertification issue --

8 (Brief interruption from the Aetna people  
9 on the conference phone.)

10 HEARING OFFICER CUTTER: One thing you  
11 guys are going to have to do today is you've got  
12 to come up here when you talk because the court  
13 reporter wants to be sure she captures everything  
14 accurately, and the acoustics in this room aren't  
15 all that great.

16 Aetna, would you please identify yourself  
17 so the folks in the room will know who you are,  
18 since you sound like my mother over in the corner,  
19 you know, that third eye in the back of her head  
20 telling me what I'm doing wrong.

21 MS. SULLIVAN: Corie Sullivan, counsel for  
22 Central Region.

23 MS. STEPHAN: And this Bonnie Stephan,

1 counsel for North Central Region. Hi, everyone.  
2 We appreciate your patience while we attend via  
3 phone.

4 HEARING OFFICER CUTTER: Thank you, ladies.  
5 They're with Aetna.

6 One of the principle things that popped  
7 out of our last meeting, as I was saying, is there  
8 seems to be a clear delineation on preauthorization,  
9 precertification issues between the HMO world and  
10 the insurer world, and obviously for those of us  
11 who deal with insurance on a day-to-day basis, we  
12 understand that, but maybe not everybody in the  
13 room would it be that clear about why that would  
14 happen.

15 The primary reason for that is that  
16 insurers will in many cases rent networks of  
17 providers, so the relationship with that provider  
18 is not at the same level of intimacy as it is on  
19 the HMO side of the fence. The HMO providers and  
20 contracts that they agree to are a much closer  
21 relationship with the HMO entity than it is in  
22 some cases on the insurer side.

23 Because of the rental issue, I think

1           that's probably what opens the door a lot of times  
2           to some of these other things that pop up that may  
3           not necessarily be a result of that same process  
4           in the HMO world.

5                        So maybe we can take some pointers from  
6           them but we're also looking at -- and I spent  
7           hours and hours and hours with one click of my  
8           mouse on a web site and pulled up some information  
9           from these other states. I didn't spend hours and  
10          hours, I'm just joking -- so that we have some  
11          sense of this same issue and how it's being  
12          addressed in other states so that we can learn  
13          from what's already out there: Is it good? Is it  
14          bad? You know, is it helpful? Is it not helpful?  
15          Should we even consider it; that sort of thing.

16                       Tina is kind of walking through that right  
17          now so that we'll have some better basic criteria  
18          to give you as we talk this afternoon.

19                       I think because the providers can give us  
20          a perspective not only of their world but also how  
21          it impacts the patient in many cases, I want to  
22          start with the provider issue this afternoon. I  
23          know there are several providers here in the room

1 with us that weren't here at the last meeting.

2 Michael, did you want to start us off  
3 today? Is there anything additionally from what  
4 we exchanged at the last meeting that you want to  
5 bring to the table?

6  
7 MICHAEL YODER, CEO  
8 SOUTHSIDE FAMILY MEDICAL GROUP

9 I am Michael Yoder, Southside Family  
10 Medical Group.

11 In our conversation last week or last  
12 month rather, we concluded with the concept of is  
13 there some way to get a uniform precertification,  
14 prior authorization process. You know, one of the  
15 problems we have as a family practice office is  
16 it's hard for us to know which policies even  
17 within one insurance company, require pre-cert,  
18 prior-auth referral, it's hard to know that.

19 Out of this last meeting, we did have a  
20 meeting with Anthem that gave us their web site,  
21 that gave us a nice fixed stack of information  
22 that we can thumb through, but it's still such a  
23 big stack.

1                   Again, coming back to the idea of how can  
2                   we simplify the process? I'm not sure I have a  
3                   good answer for that because it is a big question,  
4                   it is a hard question to answer.

5                   Some of it I have to look back in my  
6                   notes. I wasn't prepared to talk quite this soon,  
7                   but one of the ideas was, if I recall -- help me  
8                   out here, is there some way to --

9                   HEARING OFFICER CUTTER: Have a list of  
10                  what --

11                  MR. YODER: Well, exactly, to simplify it  
12                  a little more instead of -- have a clearing house,  
13                  one central clearing house that we can go to  
14                  instead of going to Anthem web site, Aetna web  
15                  site, United Health Care web site, M-Plan web  
16                  site. You know M-Plan is pretty clear cut, you  
17                  need a referral.

18                  But instead of going to these places, is  
19                  there one central location to which we can go? If  
20                  we can do something like that through the State,  
21                  that would be wonderful.

22                  I want to commend the State here because  
23                  there's a new web site for our doctors regarding

1 prescriptions and where patients were getting  
2 prescriptions. That is a wonderful tool, and if  
3 there are doctors in this room that are not aware  
4 of it, check with your association. It's a  
5 wonderful tool to find out which one of your  
6 patients is abusing their medications. So I'll  
7 just throw that out there.

8 HEARING OFFICER CUTTER: Thank you,  
9 Michael.

10 Did you want to come up, Bernie?

11 DR. EMKES: Just as a word of advice, be  
12 careful coming on this side because there's two  
13 cords.

14  
15 BERNIE EMKES, M.D.  
16 MEDICAL DIRECTOR  
17 ST. VINCENT HEALTH

18 Good afternoon. Thank you, Carol.

19 I'm Bernie Emkes, I'm a family physician  
20 by training and a medical director at St. Vincent  
21 in the managed care department. As such, we get  
22 to hear about a lot of issues with many, many  
23 insurance plans and many of those trickle up to

1 me, only because I'm kind of the place they  
2 trickle to.

3 I have with me today, Lori Mills, who is  
4 one of our practice facilitators, managers in our  
5 network and I'm going to ask her if possible to  
6 come up after me to talk about some very specific  
7 issues.

8 I would just like to add to what was said  
9 there, the problem that we see, I think, from an  
10 insurance plan issue has to do with insurance  
11 plans really not being the vendor of last resort.  
12 Several of the large insurance plans have actually  
13 farmed out radiology, particularly precertification  
14 processes to vendors, and the vendor then is, in  
15 my opinion, acting on behalf of the insurance  
16 plan.

17 In many cases there seems to be a bit of  
18 finger pointing going back and forth: Well, we  
19 didn't tell them to do it that way; well, we're  
20 doing only what we were told. And that leads to  
21 some real confusion on the part of physicians,  
22 particularly as they try to take care of patients  
23 in their offices who have some level of acute

1 medical problem, and I use that term kind of  
2 relatively.

3 As any of you in healthcare know there are  
4 emergencies. I have a spear sticking out of my  
5 chest, that's an emergency. I have a gun shot  
6 wound or an acute laceration. Those are acute  
7 emergencies.

8 There are also urgent situations where a  
9 patient presents with increasing symptoms over a  
10 period of time and they are now at the doctor for  
11 a reason. They're sick enough. They believe they  
12 need medical care at that time. That is slightly  
13 different than an emergency but not a lot  
14 different, and that's a problem.

15 And, then, the third thing is elective,  
16 where you come in with a headache and we decide  
17 you need a cat scan and we can do that tomorrow or  
18 we can do it a week from Friday, and probably it's  
19 not going to make a huge difference when that gets  
20 done.

21 So I'd like to differentiate between those  
22 three different kinds of patients. I think the  
23 problem that we see in our network, and I think

1           Lori will speak to this, is the urgent patient.  
2           Emergencies usually end up in the emergency room,  
3           and many of the companies don't even require  
4           pre-cert authorization for cat scans or MRIs, or  
5           whatever, if they're done in an emergency room.

6                     On the flip side of that, if the same  
7           patient happens to be seen in a physician's  
8           office, which is really a much more cost effective  
9           way of taking care of the patient, then the  
10          pre-cert is required and there's always that gray  
11          area that seems to require a lot of time on the  
12          telephone, use of resources, and et cetera,  
13          et cetera, et cetera. I think that's what this  
14          committee is designed to try to look at. So that  
15          is my first comment.

16                    My second comment has to do really with  
17          the potential harm to the patient. Lori will  
18          speak to this I think very effectively. But in  
19          those urgent cases where a patient comes in and  
20          they have swelling in their right lower extremity,  
21          and we, as a doctor, believe that they may have a  
22          blood clot, but the health plan requires  
23          precertification for the ultrasound to prove or

1           disprove that blood clot, and then the health plan  
2           tells us they have between four and 24 hours to  
3           make a decision about whether they are going to  
4           give you that authorization, that is a problem for  
5           practicing physicians. And I think it's a problem  
6           for the citizens of Indiana as they are trying to  
7           protect themselves from a worsening condition,  
8           i.e., if that blood clot is there and breaks off  
9           and goes to the lung, while the insurance plan is  
10          deciding whether or not the test is needed. I  
11          think that's a problem, and I think everyone in  
12          this room would probably agree with that.

13                 So in my mind the bigger question that we  
14          need to think about is, as a group and maybe as a  
15          legislature, how do we differentiate between  
16          acute, semi-acute, and elective, and the processes  
17          that need to be in place.

18                 I wrote two documents and I will leave  
19          them with you for your edification. I don't want  
20          to necessarily read through them because it would  
21          take most of the time that we have here today, but  
22          I do think that the issue of the art of medicine  
23          versus the science of medicine is to some degree

1           what is at stake here.

2                       Yes, there's a lot of science in medicine,  
3           but when I go to Dean Holden in the past or Dean  
4           Brater today and say, "What percentage of things  
5           that doctors do have absolute evidence to support  
6           what is being done?" The answer is always less  
7           than 50 percent.

8                       Yet, radiology pre-cert processes are  
9           defined as a 100 percent process, which makes no  
10          sense to physicians who see patients every day and  
11          try to take care of sick patients in their office.

12                      So those would be my comments at this  
13          time. I'd be glad to answer any questions now or  
14          in the future, after Lori comes up.

15                      Lori, you want to come up and talk about  
16          some specific cases that you had that have been  
17          difficult.

18  
19                               LORI MILLS, R.N.

20  
21                              Good afternoon. My name is Lori Mills.  
22                              I'm a registered nurse. I'm a regional practice  
23                              administrator and I'm a consumer of healthcare, as

1 all of you are as well.

2 I don't think anybody realizes, unless  
3 you're actually at the desk trying to provide  
4 quality healthcare for our patients and families,  
5 what the process is to get a precertification to  
6 the facility that is then going to take care of  
7 that patient. It's very time consuming. It's  
8 very frustrating, and well-intended, dedicated  
9 staff try repeatedly to penetrate the obstacle  
10 that completely bombard us and keep us from  
11 achieving our goal. Sometimes we can be on the  
12 phone for 40 minutes and plus 40 minutes trying to  
13 get to someone only to be met then either with,  
14 oh, you're in the wrong district. I need to  
15 transfer your call. Repeatedly that will happen.  
16 We will get ended calls and our destination is  
17 always uncertain. It's very time consuming. It's  
18 very costly.

19 From a regional practice administrator  
20 point of view, I have to look at that cost. I  
21 have to look at how much is it costing for that  
22 staff member to constantly be on the phone, on  
23 hold, when they could be doing something else,

1 going for other patients to put them in exam rooms  
2 so the physicians can do what they do best.

3 So I have to look at all of those measures  
4 and say this is very frustrating not only to the  
5 patient and family, but certainly to the staff as  
6 well.

7 I applaud Dr. Yoder for saying that no two  
8 companies are the same, and not only that but no  
9 two companies within the company are the same, and  
10 you'd better get a name because you may have to go  
11 back to that person, and we have many times, but I  
12 talked to Susie and Susie gave us the pre-cert  
13 number. I'm giving you the pre-cert number.

14 I'm sorry that pre-cert number doesn't  
15 register and we don't have a Susie here.

16 I can't tell you how frustrating that is  
17 because in the end you will get that bill and you  
18 will have the balance to pay.

19 We try to do our best, sometimes it's just  
20 not good enough, and that's a very, very sad  
21 situation for all of us, and we hate that as much  
22 as you hate receiving that bill.

23 As a nurse I must say that recently we

1 have had several patients who have needed stat  
2 procedures. Immediate, within an hour, would you  
3 say, Dr. Emkes, is reasonable for stat? When we  
4 attempted to make the call -- we had one lady who  
5 actually had a very high fever and abdominal pain  
6 but she had been going for four or five days and  
7 she said, you know, no, I don't want to go to the  
8 hospital. Do everything you can. So we needed a  
9 CT scan. Called the company and they said okay,  
10 that stat authorization, if it comes through, will  
11 take between four and 24 hours. Four and 24 hours  
12 for someone who has fever and abdominal pain.

13 At the same time what I didn't know was  
14 happening at another nursing station in this  
15 particular practice, there was a head injury of a  
16 young man who had fallen off his skateboard, hit  
17 his head, and a day later was starting to have  
18 visual problems and vomiting. Doctor ordered a  
19 cat scan of the head, and, again, same company,  
20 four to 24 hours.

21 That's fine, you think from a payer view. If  
22 you are the parent of that child or the patient,  
23 in either of those cases is that acceptable?

1 Absolutely unacceptable. And as a healthcare  
2 provider I'm saddened and embarrassed to think  
3 that I have to deliver that message to those  
4 people.

5 So it happened to be that was a Friday  
6 evening at four o'clock. Well, when I said to the  
7 person, so you're wanting me to stay a minimum  
8 until 8:00 p.m. this evening, and have my employer  
9 pay me overtime just so I can make sure that this  
10 person is going to be able to have a pre-cert to  
11 get these tests done.

12 They said, you know what, send them to the  
13 emergency room.

14 I said, is that really cost effective?  
15 I'm really trying to do my job to help you, as  
16 well as I'm trying to do my job to help us, and to  
17 go to the emergency room is completely counter  
18 intuitive to what we're all here to do as  
19 healthcare professionals and cost effective  
20 managers.

21 They said, you know what, this is the best  
22 we can do, four hours. I want you to know I  
23 stayed. I stayed until five until 8:00. I called

1 back, and we got the referral. I was able to call  
2 that person. We did get them in for the test. We  
3 got the young man in for the cat scan of his head  
4 as well.

5 But 24 hours wasn't going to be up  
6 Saturday at four o'clock because Saturday and  
7 Sunday are weekends. It was the next business  
8 day, which would have been Monday evening at  
9 four o'clock. That again is totally unacceptable.  
10 It is absolutely against everything any of us went  
11 to school to be educated to do to provide quality  
12 healthcare. I'm very sad that that situation is  
13 very real and it's not just our practice, it's  
14 yours too.

15 As a consumer I can tell you that we have  
16 someone in our family who went for a general  
17 health screen, and at that screen it was  
18 determined that he has a nodule in the upper left  
19 lobe of his lung. The recommendation from a very  
20 wonderful physician/radiologist said he needs to  
21 have a P.E.T. scan. That came back to his  
22 physician. We called the insurance company. The  
23 P.E.T. scan was denied. They said he needs a cat

1 scan at the least. We called the radiologist  
2 locally and he said, you know what it may not be  
3 differentiated. You really ought to go for the  
4 PET scan. We called the company back. This time  
5 the physician called. Again, the physician was  
6 denied the P.E.T. scan. We went ahead and  
7 obliged. We did the cat scan. Not only does he  
8 still have the upper left lobe nodule he has two  
9 in the left low basis as well.

10 Could that be differentiated between on  
11 the cat scan; I'm afraid not. They said, I'm  
12 sorry we can't differentiate anything. You need  
13 the P.E.T. scan.

14 So once again the doctor called, and he said,  
15 now we've cost you a lot of money, are you ready  
16 to move to the P.E.T. scan? We have that  
17 scheduled August 26th. Is there a price on family  
18 stress, family sleeplessness, family anxiousness;  
19 there's no price on that, not at all.

20 I'm sorry, but that is again another  
21 situation; very real now, very real, but I always  
22 felt the realness when I had to report the same  
23 kind of misunderstanding to the patients. That

1 the insurance company would not listen to what it  
2 was that a very capable, competent, educated,  
3 medically caring, physician made a judgment, a  
4 clinical judgment, that you, some of you, need a  
5 specific test, but unfortunately someone other  
6 than a physician is making the decision with no  
7 hands-on clinical exam. They haven't touched  
8 anybody. They haven't seen the chart. They have  
9 no past history to go by. They have nothing.  
10 They have nothing to make that clinical judgment  
11 on the other end of the telephone, and I'm very  
12 sorry that it's come to this in many cases that  
13 those are the folks that are making those  
14 judgments.

15 So on behalf of St. Vincent Health and our  
16 practice, thank you for allowing me to speak.

17 HEARING OFFICER CUTTER: Thanks, Lori.

18 Any other providers in the audience that  
19 would like to come up and address this issue or  
20 maybe give us any different perspective on what  
21 we've already heard.

22 MR. YODER: I'd like to.

23 HEARING OFFICER CUTTER: Absolutely,

1 Michael. Come on, come on.

2  
3 MICHAEL YODER, CEO  
4 SOUTHSIDE FAMILY MEDICAL GROUP

5 Again, Michael Yoder, Southside Family  
6 Medical Group. I just want to make a direct  
7 recommendation to the committee and hopefully this  
8 is something that can be considered and presented  
9 to the Legislature. At the end of the last  
10 meeting we talked about the gatekeeper. You know  
11 it wasn't that many years ago when the primary  
12 care doc was talked about as a gatekeeper. You  
13 went to the primary care doc, everything was to go  
14 through the family practitioner, the pediatrician,  
15 the OB-GYN, your primary care doc was to be that  
16 gatekeeper to determine what needed to go to the  
17 next level, and we look to the primary care doc,  
18 they're the ones who are trained in that area.

19 At the end of the last meeting we talked  
20 about the possibility -- we brought up the idea  
21 of, you know, how many of these prior-auth,  
22 pre-certs are actually turned down, what  
23 percentage, and it was acknowledged by our payers

1           that they are a very small percentage.

2           On the other hand, and I do understand our  
3           perspective, it was also acknowledged that when we  
4           eliminated or when they eliminated the prior-auth,  
5           pre-cert requirement, they saw an increase in cost  
6           as providers start over-utilizing, in their  
7           opinion, those services.

8           So the recommendation was made by --  
9           forgive me I forget your name, Doctor -- but by  
10          one of the doctors that we waive maybe some of  
11          those requirements, that we identify doctors and  
12          we monitor doctors that are over-utilizing  
13          through, maybe their billing records.

14          I would like to suggest as a concrete  
15          recommendation or a concrete proposal is that  
16          maybe we require prior-auth, pre-certs for new  
17          doctors coming into practice for the first couple  
18          of years, after that, waive it. You can monitor  
19          them through your billing records. You're going  
20          to get the plans as payers. You can see what the  
21          doctors are doing. Waive it after that, let your  
22          doctors do their job.

23          The doctors are there to take care of the

1 patients. They're not there to work as -- nine  
2 times out of ten, 99 percent of the time when the  
3 doctor orders these tests they get no  
4 reimbursement, they get no revenue from those  
5 tests. So that really is not an issue. The  
6 doctors are looking out for the patient.

7 So I would make a recommendation that we  
8 waive the prior-auth, pre-certs and monitor  
9 through billing after maybe some brief  
10 introductory period.

11 Thank you.

12 HEARING OFFICER CUTTER: Thank you,  
13 Michael.

14  
15 LORI STONECIPHER, OFFICE MANAGER  
16 ACADEMY ALLERGY ASTHMA & SINUS

17 Lori Stonecipher, Office Manager for  
18 Academy Allergy Asthma & Sinus.

19 At the last meeting we talked about  
20 wanting to have some examples of where we had  
21 spent the time and energy in getting prior  
22 authorizations and then only to come back and find  
23 out that their insurance company has denied the

1 service, even after they have gotten the prior  
2 authorization and gone through that process.

3 I have brought with me two examples here.  
4 I de-identified the patients on these, and I'd  
5 like to give them to you for the official record.

6 One was a sinus CT scan. One is a MRI.  
7 Again, the letter says, we have determined that  
8 the requested services will be provided, gives you  
9 an authorization, and then I have attached to the  
10 back where it says: "Dear patient, Your insurance  
11 carrier has notified us that payment on the above  
12 account has been denied." Even in regard to the  
13 prior-authorization.

14 I wanted to give you guys these examples  
15 to have, just to show you that even though you're  
16 going through all of this, it's still being denied  
17 and payments are still not getting paid to those  
18 providers.

19 HEARING OFFICER CUTTER: Thank you, Lori.

20 I know one of the things we talked about  
21 last meeting was in terms of denials of the  
22 pre-certs. In terms of percentage there weren't  
23 that many of them. One of the things that Tina

1 and I were talking about coming over today is, I'm  
2 hoping that we will have either somebody from the  
3 HMO world or somebody from the insurance world who  
4 can say, you know, we went back and we kind of  
5 looked at this and these are the circumstances  
6 under which most of those denials occurred. Did  
7 anybody do that?

8  
9 LORI MILLS, R.N.

10  
11 The reason that you may not be seeing  
12 denials in a huge bulk is, because as my last  
13 example explained, we were denied getting the  
14 tests that we wanted, therefore we went with a  
15 lesser test or a test that we did not originally  
16 want. Therefore we did that, now we can finally  
17 have that. So you're not going to see a denial.  
18 But what you don't know is, we were denied by  
19 phone and that's where it is. It's on another  
20 level; you're not seeing it.

21 HEARING OFFICER CUTTER: Thank you.

22 Yes, there's that piece, and there's also  
23 the piece of when it does get to the insurer or

1 the HMO level, what are the main reasons why there  
2 are denials. I mean in the cases that you gave  
3 I'm presuming that a cat scan is cheaper than an  
4 MRI?

5 VOICE: Correct.

6 HEARING OFFICER CUTTER: I don't know by  
7 how much. I don't know if there's a huge gap in  
8 cost or not. But I know my husband worked on scan  
9 equipment for many years on mobile scan equipment  
10 before all the hospitals got their own, and what  
11 you use cat scans for is very different than what  
12 you use a MRI for, in terms of what you're trying  
13 to find and what you're trying to see.

14 Do you think in the insurance world  
15 there's no understanding of that distinction  
16 between these tests for these folks that are doing  
17 the precertification? I mean, have you ever had  
18 that conversation?

19  
20 BERNIE EMKES, M.D.  
21 MEDICAL DIRECTOR  
22 ST. VINCENT HEALTH

23 Yes. I'll put on another hat when I

1 speak.

2 Bernie Emkes, again.

3 Past medical director of our physician  
4 hospital organization, medical director of health  
5 plan, so a little different role but nonetheless  
6 some experience.

7 I believe that there are processes in  
8 place and there are algorithms that people should  
9 be following to decide which test is the best,  
10 which test may give you the most information.

11 The problem that I see is that (A) the  
12 people that Lori is dealing with on the telephone  
13 may have an algorithm in front of them, but, you  
14 know --

15 I explain healthcare in one of two ways,  
16 and my boss is sitting here so he'll know this,  
17 healthcare is either a thousand piece jigsaw  
18 puzzle with ever changing borders or it's an OWA,  
19 Other Weird Arrangement. Now, if it isn't the  
20 thousand piece jigsaw puzzle, which has been  
21 created by a pre-cert process, every patient that  
22 walks into my office is an OWA. There is no  
23 one-patient profile that you see, Dr. Yoder,

1 Dr. Patterson, or anybody else. Every patient is  
2 a little bit different.

3 The other point I wanted to make and  
4 didn't earlier had to do with pharmacy. I think  
5 there's some differentiation that needs to occur  
6 and this will be controversial because I'm going  
7 to make it sound like primary care physicians  
8 aren't specialized enough, but one of the problems  
9 we see -- we employ a lot of sub-specialty  
10 physicians at our hospital, and when it comes to  
11 the pharmacy side of precertification there are  
12 just as many problems there as there are on the  
13 side of radiology; probably more, actually,  
14 because there's even more plans, and you're  
15 dealing with the Medicaid programs, plural, each  
16 of which has a different formulary, et cetera,  
17 et cetera, et cetera.

18 But the dilemma that I run into with our  
19 specialists is they are kind of the court of last  
20 resort. You know, the asthmatic patient who's  
21 been to a primary care physician, whether it be a  
22 pediatrician or a family doctor, they are not  
23 being well controlled. They may have even gone to

1 an allergist. Now, they're going to a pediatric  
2 pulmonologist, and the pediatric pulmonologist  
3 says this is the medicine I need.

4 Why do I need that?

5 They failed these over here. And I am now  
6 at my wit's end and I don't know what else to do  
7 for this patient. This is what they need. Only  
8 to be told, no, you can't have that because we  
9 would prefer you take two of the old ones that  
10 didn't work and combine them and use them at the  
11 same time and, then, see if that works before you  
12 provide the best treatment that you think is right  
13 for the patient.

14 So there are so many permutations of this  
15 that it's very hard to get the answer, and is  
16 probably why there's a study committee. But I  
17 think this is just the tip of the iceberg of the  
18 problems that physicians deal with every day.  
19 Like I said, I don't personally deal with these  
20 problems and that's why I asked Lori to come  
21 because she deals with these in relationship with  
22 her physicians every day.

23 Again, I'm happy to try to answer any

1 questions, but hopefully that clarified a little  
2 bit of what we're talking about.

3 HEARING OFFICER CUTTER: Thank you,  
4 Bernie.

5 In addition to radiology and meds, is  
6 there any other category of treatment or services  
7 or issues that predominate the problems that we  
8 have with preauthorization, precertification?

9 DR. EMKES: I think that's a very  
10 question.

11 I think what was going through my mind was  
12 referrals. Referrals to the appropriate physician  
13 to manage a particular patient.

14 Dr. Yoder mentioned the state registry  
15 program for pain medications primarily, but it's  
16 used for all medications. What we as physicians  
17 are interested in --

18 MR. YODER: I hate to interrupt, but I'm  
19 not a doctor. I'm the Chief Executive of  
20 Southside Family Medical. For the record I'm not  
21 Dr. Yoder.

22 DR. EMKES: Thank you. Sorry.  
23

BERNIE EMKES, M.D.  
MEDICAL DIRECTOR  
ST. VINCENT HEALTH

The point is well made, the registry is hugely helpful and initially that was to be used only by the State Police Department.

Fortunately, the Medical Association through ISMA and the Indianapolis Medical Society went to the State and said, you know, this is nonsense. Doctors are the people taking care of these patients. How do we not have access to this type of information. We are the ones who can make a difference on the front end. So these are the kinds of programs that I think work.

I like the idea of a uniform process, a uniform way of dealing with these kinds of situations. I think that's a wonderful idea, but I also think that there may need to be, and you started to speak about that, stratification, you know, how do we identify who is properly using and improperly using these costly resources that we all agree have to have some level of management built into them, but then how do we define who

1 needs to go through these seven hoops as opposed  
2 to who needs to go through one hoop or two hoops.

3 HEARING OFFICER CUTTER: Thank you.

4 Anybody else?

5 DR. PATTERSON: Yes.

6 HEARING OFFICER CUTTER: Come on up,  
7 Dr. Patterson.

8  
9 DAVID PATTERSON, M.D.  
10 ACADEMY ALLERGY ASTHMA SINUS

11 Thank you, Carol.

12 I'm Dr. David Patterson. I'm a private  
13 practice allergist. I want to speak to something  
14 that Bernie brought up because it's at the heart  
15 of our practice. You know, as a specialist people  
16 come to see me with really complicated problems.  
17 I'm like Bernie said, I'm kind of the guy of last  
18 resort, and people come to me and say, you know,  
19 I've seen Dr. X, Y and Z, and they couldn't help  
20 me. They tried but they couldn't help me, so  
21 you're it. So that puts a lot of pressure on you  
22 as a physician.

23 Many times I'm able to make a diagnosis

1 and suggest a treatment option for these people  
2 who have some unusual problems only to be told by  
3 the insurance company I can't do a test, I can't  
4 do a treatment, I can't do a medication, it's not  
5 covered, it's not FDA approved, it's not on the  
6 formulary, it's not this, it's not that, and  
7 that's a real problem.

8 What medicine is becoming is, it's  
9 becoming a system where if you have a common  
10 straightforward one problem that fits an algorithm  
11 that we have in medicine, which isn't a lot of us,  
12 you're in good shape.

13 But God help you if you've got a problem  
14 that is outside of the norm or you have several  
15 problems that interact with each other. We don't  
16 have a way to deal with it because we don't have a  
17 set of algorithms.

18 We've made medicine a series of algorithms  
19 and it's not. People are not a series of  
20 algorithms. They are a very complex biological  
21 organism that respond differently to different  
22 treatments and have various diseases and have  
23 things in combination. The system gets infinitely

1 complex really quick.

2 There's nothing more frustrating to see in  
3 my business than simply seeing a patient in front  
4 of you that has an immunodeficiency. They've been  
5 sick for years. They've gone from doctor to  
6 doctor and they've been on countless antibiotics,  
7 and you have finally figured out what you think is  
8 wrong with them and you're ready to suggest a  
9 treatment and the insurance company says, "We're  
10 not going to approve that. We can't approve  
11 that."

12 It's not just a prior authorization or  
13 precertification. We're not going to pay for it  
14 period. We're going to practice medicine and tell  
15 you what this patient should get and not get.

16 So we've really got to -- when we enact  
17 all these regulations, we're just hurting  
18 ourselves because we're all going to be patients  
19 sometime and we all have loved ones who have  
20 complex problems, and it really does come back  
21 around to bite us in a really big way.

22 I really see that on the specialist side  
23 because I deal with some really arcane, outside

1 the box type of stuff, and I use a lot of things  
2 that are treatments that are kind of last resort;  
3 maybe they're off label, maybe they're not FDA  
4 approved, and we explain the risk and benefits  
5 very carefully to patients, and a lot of those  
6 patients respond very well, it changes their life  
7 for the better. But it doesn't fit in a nice neat  
8 algorithm and frequently it is an all out battle  
9 with the insurance to get things paid for.

10 So I think you've seen a little bit in the  
11 media because you've seen some cases highlighted  
12 in the media where people have had cancer,  
13 especially children, we all have compassion for  
14 children, and these children had cancer that  
15 hasn't been treated before and they want to try  
16 some experimental drugs that's not FDA approved,  
17 and the company with the drugs says, no, we're not  
18 going to give it to you; the insurance company  
19 says, I'm not going to pay for it; and that's  
20 created this big uproar.

21 But it doesn't just happen to people with  
22 terminal cancer, it happens to people with chronic  
23 diseases who don't have a terminal disease

1 necessarily, and yet they're trying to get some  
2 sort of treatment and the insurance companies are  
3 saying, no. We're not going to give you that  
4 treatment. We're going to deny that.

5 So, you know, we've really got to think  
6 about what the end process is here, and if the end  
7 process is to help patients, we've got to make  
8 these regulations less burdensome or we're really  
9 going to have some problems.

10 HEARING OFFICER CUTTER: Thank you,  
11 Dr. Patterson.

12 Anybody else?

13 I think we've heard both sides of the  
14 issue with the providers. Thank you very much for  
15 coming today and opening up some other things for  
16 us that poor Michael wasn't able to carry or  
17 Dr. Patterson wasn't able to speak to last session  
18 just because of the areas that they are pretty  
19 much dealing with on a daily basis.

20 So we have said is there a possibility to  
21 define those folks who maybe should be monitored  
22 more closely in terms of providers. I think too  
23 Michael's point makes some sense.

1 I am going to ask for -- I know there's  
2 some HMO people in the audience. Are there any  
3 insurer reps here today besides Aetna?

4 I think it's probably appropriate for us  
5 to ask Aetna to speak to this issue since they are  
6 an integral part of our insurance world here in  
7 Indiana.

8 One of the things that we probably need to  
9 put on the table right now, and I know this  
10 impacts the providers, but I don't know if they  
11 realize to what extent it probably impacts them.

12 There is a difference in insurance plans  
13 between an ERISA plan and a fully-insured plan.  
14 What we are talking about today is not going to  
15 touch ERISA plans. So a lot of the carriers, like  
16 Aetna and Signa that deal primarily with the  
17 larger employers and do a lot of ERISA plans,  
18 whatever we say, whatever we recommend to the  
19 Legislative Council will ultimately not impact  
20 them at all.

21 In the State of Indiana, probably close to  
22 60 percent of the people who are insured by group  
23 insurance are under ERISA plans, not fully-insured

1 plans, which in my opinion helps complicate the  
2 circumstances that we're trying to cope with. And  
3 I don't know, are there any lawyers to tell me is  
4 there any way to get around that, but I don't  
5 think there is. State law just doesn't ever trump  
6 Federal law, so we're sort of glued to that, I'm  
7 afraid.

8 Aetna, are you prepared to talk a little  
9 bit about your side of the issue in terms of the  
10 preauthorizations, precertification.

11  
12 BONNIE STEPHAN (via telephone)  
13 AETNA

14 Hi, this is Bonnie Stephan with Aetna, and  
15 I hadn't planned on talking, but are there no  
16 other insurers or health plan representatives  
17 there in the building?

18 HEARING OFFICER CUTTER: They're hiding.

19 MS. STEPHAN: They're hiding.

20 You know we appreciate the opportunity to  
21 talk and recently over the last several years  
22 Aetna has reduced the amount of items that must be  
23 pre-certified, and certainly I don't know who the

1 physicians are that we're working with that we're  
2 not getting responses to them fast enough.

3 I can only speak to some of the things  
4 that we have in place. That if the physicians  
5 believe it's urgent, they should go ahead and  
6 provide the care. So, you know, I can't speak  
7 with all the plans because I don't know what  
8 specific problems they have.

9 Would it be easier on everyone if there  
10 were no rules? Probably, yes. And would that  
11 spiral medical costs, absolutely. So I'm not sure  
12 that there's any easy answers, and I think that's  
13 why we like to attend forums like this to  
14 understand a little bit better and, you know, try  
15 to come to a resolution that everybody can live  
16 with.

17  
18 CORIE SULLIVAN (via telephone)  
19 AETNA

20 This is Corie Sullivan, and we do see  
21 ourselves as providers in the healthcare  
22 operation, so as Bonnie and I were talking as  
23 the meeting was going on about what our

1           preauthorization requirements are and as she  
2           stated earlier it is much more limited than it had  
3           been previously.

4                   And one of the questions I had was, are  
5           you physicians seeing an increased difficulty in  
6           precertifications, is it different than what it  
7           had been previously?

8                   MS. KORTY: Everyone in the room is  
9           nodding their head yes to that question, they are  
10          seeing increased difficulty in getting  
11          preauthorization.

12                  DR. EMKES: But not necessarily Aetna.

13                  MS. SULLIVAN: Because there are more  
14          items to be certified or because it's a different  
15          process?

16                  MS. KORTY: Anyone want to address that?

17                  DR. EMKES: Just so you can hear me, this  
18          is Dr. Emkes again, Bernie Emkes. With Aetna,  
19          particularly, the issue is not the pre-cert  
20          process.

21                   However, the experiences we've had have to  
22          do with what your company considers  
23          investigational and experimental and therefore not

1 payable by the plan after the patient has had the  
2 test already performed. It is the expectation of  
3 Aetna, evidently that we understand everything  
4 that you consider non-covered, non-investigational  
5 or experimental and notify the patient ahead of  
6 time in order for us to then, shift that cost to  
7 the patient.

8 That is the issue that I've seen  
9 primarily, and I'm getting a lot of head shaking  
10 from some cardiology folks here in the front row  
11 here. So that has been our issue, and if you want  
12 specifics I don't know that I want to share that  
13 in this big room, but I'd be happy to share my  
14 phone number with you and you can give me a call  
15 and we'll privately talk about those tests that  
16 Aetna is the only company that do not cover  
17 nationally, to my knowledge, such as certain blood  
18 tests and certain other cardiac testing.

19 MS. SULLIVAN: Okay.

20 MS. STEPHAN: And this is an issue too?

21 DR. EMKES: I would say this is more  
22 ongoing. I know that actually your company has  
23 had discussions with the American College of

1 Cardiology and that your company has had  
2 discussions with me personally, I know, about the  
3 issue and how we can maybe help resolve that and  
4 come to some mutually agreeable situation but we  
5 haven't moved very far.

6 MS. STEPHAN: We can follow up on that and  
7 see where that stands. Thank you.

8 MS. KORTY: To the Aetna people, this is  
9 Tina Korty, from the Department. You weren't  
10 listening in on our last study committee meeting  
11 but one thing that the providers pointed out in  
12 that situation is that -- or at least they believe  
13 everything that is being saved on your end is  
14 being spent in their offices for added staff to go  
15 through the preauthorization procedures, and no  
16 one at the last meeting was able to provide us  
17 with any data on the savings from the insurers  
18 end, and I was wondering if you have any  
19 information you can share with the room on that?

20 MS. SULLIVAN: No.

21 MS. STEPHAN: Tina, if I can restate, it's  
22 a little bit difficult to hear, are you asking us  
23 for data that demonstrates the savings due to

1 precertifications?

2 MS. KORTY: Yes.

3 MS. SULLIVAN: I don't have any handy.

4 MS. KORTY: Is it something you could  
5 provide to us before the next meeting? .

6 MS. SULLIVAN: When is the next meeting?

7 MS. KORTY: September 10th.

8 MS. SULLIVAN: This is Corie Sullivan  
9 speaking. I'll see what I can find out what's  
10 already captured and try to make those  
11 determinations. There's staff physicians that  
12 make clinical policy determinations and those  
13 clinical policies are on-line, and you can access  
14 those.

15 MS. STEPHAN: I think what you're asking  
16 is, can we document savings on the variety of  
17 processes that you're having to go through and  
18 what happens to those savings, do they translate  
19 and reduce premiums; is that what you're asking?

20 MS. KORTY: Basically what we're asking,  
21 are there savings, and if so, can you tell us what  
22 those are.

23 MS. STEPHAN: Okay. You know I would

1           imagine there are savings and I will have to see  
2           what I can find, okay.

3           MS. KORTY: Okay. And that invitation  
4           goes out to anyone in the room, if you want to  
5           document the savings from preauthorization or  
6           document the cost to your practice of having to go  
7           through the preauthorization procedure.

8           Our task for the Legislature is to gather  
9           information, and the more information we can  
10          gather, the more informed this decision will be.

11          HEARING OFFICER CUTTER: Mr. Willey, that  
12          goes for you too.

13          MR. WILLEY: We will provide that  
14          information at the next meeting.

15          HEARING OFFICER CUTTER: I am going to  
16          pick on the HMOs for a minute because they were so  
17          helpful last meeting and, Peggy, you're here,  
18          Holly is here, you guys made it fairly clear that  
19          in terms of the preauthorization, precertification  
20          process your list of those items that really fall  
21          into that category has been substantially reduced  
22          over the last few years so that you don't have,  
23          maybe, as many of those on your side of the fence

1 as the insurers have; is that a fair statement?

2  
3 HOLLY KING  
4 M-PLAN

5 I'm Holly King with the M-Plan.

6 Yes, Carol, I think that's a fair  
7 statement. I think though that the real key is  
8 that with M-Plan, and I know with Advantage, and I  
9 think PHP, the final decision is left with the  
10 physician, so the provider makes that decision.

11 Now, there are certain things that have to  
12 pre-certified at the plan level. You had someone  
13 call me yesterday about one that came up and the  
14 end result, what I found out when I looked into it  
15 was that the particular drug that they wanted to  
16 use was not FDA approved for that purpose. So we  
17 just had to have the provider provide the  
18 additional information to justify that they needed  
19 that, which had already been faxed, but, you know,  
20 that's a safety thing.

21 But I think in general and I think you  
22 mentioned last time Mr. Yoder that you didn't have  
23 issues with the plans that work through

1 St. Francis Regional or --

2 MR. YODER: St. Francis Hospital.

3 MS. KING: -- provider networks. So I  
4 don't know that these aren't relevant. I would  
5 like to hear if you do have issues.

6 MR. YODER: Actually, we are not a plan  
7 participant, we dropped them.

8 HEARING OFFICER CUTTER: Do you ever see  
9 like the denials on the preauthorization or  
10 precertification? I mean, I know yours are few  
11 and far between because of the way you leave the  
12 call ultimately to the physician. But when there  
13 are, can you give us any idea why, is there a  
14 common reason for a denial or is it going to be  
15 because there's so many different circumstances  
16 you're going to depend on the patient, and the  
17 condition, and the diagnosis, and the treatment  
18 plan, and all that sort of thing.

19 MS. KING: And I'm not a clinician so I  
20 can't speak 100 percent sure, but I would say that  
21 most of the time the reasons for our denials are  
22 not clinical or medical.

23 They are administrative. The situation I

1 brought up last time where somebody -- maybe  
2 they're on COBRA and they didn't pay their COBRA  
3 premium. Well, we have to cover them. We have to  
4 give them the 30 day grace. So they may be  
5 getting treatment in there and when the bill  
6 actually comes in, they never paid their premium  
7 so their coverage has lapsed. We had no way of  
8 knowing that when they were getting treatment and  
9 the doctor didn't have anyway of knowing it  
10 either. Presumably the patient would have known  
11 that they didn't have coverage.

12 But that probably is the most common  
13 situation where we have a denial is where somebody  
14 wasn't really eligible for coverage and we didn't  
15 know it at the time.

16 HEARING OFFICER CUTTER: Thank you, Holly.  
17 So it's more from an administrative perspective in  
18 your world that you guys see that happening than  
19 from any clinical issues?

20 MS. KING: Yes.

21 MS. MALOOLEY: May I say something?

22 HEARING OFFICER CUTTER: Yes, Jerry. You  
23 want to come up.

JERRY MALOOLEY  
STATE PERSONNEL OFFICE

Jerry Malooley. I'm going to wear my  
State Personnel hat today.

We have had many employees call us and say  
that the prescription they were on is no longer on  
formulary, et cetera, or, you know, and how do we  
know this, and now I have to bother my physician  
for maybe a less effective medication, et cetera,  
or go through a long process.

That's one issue that we would like to  
understand why that happens in the middle of the  
year, and why whatever we start out with, unless  
there is a recall or something like that, why for  
one year our patient can't be on the drug -- why  
are things removed just -- it looks as if -- to  
someone like me, it's arbitrary or economic or  
something like that.

The other thing is, if something isn't FDA  
approved, do you as health plans ever look at the  
specialty or sub-specialty societies to find out  
what is truly effective in their practices?

For example, I remember Tegretol as an

1 anti-convulsant but it's also used for pain. I  
2 don't know whether you are actually going to wait  
3 to find out if it works for pain and the FDA  
4 approves it, or if enough physicians have used it  
5 for pain and saying, yes, you know, as a  
6 neurologist this is what I do and it works very  
7 effectively.

8 We would like to understand from a health  
9 plan standpoint, we're self-funded, but still we  
10 would like to understand how that happens to the  
11 pharmacy formulary.

12 HEARING OFFICER CUTTER: Can anybody  
13 answer that one? .

14 DR. EMKES: Yes.

15 HEARING OFFICER CUTTER: Yes.

16  
17 BERNIE EMKES, M.D.  
18 MEDICAL DIRECTOR  
19 ST. VINCENT HEALTH

20 If the HMOs won't, I will.

21 Bernie Emkes again, I'll put on my third  
22 hat. I used to sit on a pharmacy and therapeutics  
23 committee for one of the local plans. .

1 I think there's multiple answers to your  
2 question. One, drugs may become generic during  
3 the middle of the year. So where Prilosec was  
4 covered before, now it's become generic or it may  
5 go over-the-counter, that's the second reason.

6 If it goes over-the-counter, the plan will  
7 probably not pay for that on prescription because  
8 it's now available to be purchased over the  
9 counter.

10 There may be contracts that the plans  
11 have. These could be national plan contracts or  
12 local plan contracts and if they can't come to an  
13 agreement, there may be a change in formulary  
14 because the contracts have changed, expired, or  
15 are non-renewed, or are chosen by one party or the  
16 other not to renew.

17 I'm trying to think if there's a third  
18 reason. It seems like there's another couple of  
19 reasons but those are two of the major reasons I  
20 think, and since I didn't see anyone coming up  
21 from the industry.

22 HEARING OFFICER CUTTER: Thank you.

23 John, can you talk about this at all?

1 MR. WILLEY: Jerry, as far as being the  
2 state funded administrator, which is what we are  
3 and we're happy to talk about it, as you know  
4 you're self-insured, so you're making a lot of  
5 those policy decisions regarding the formulary and  
6 what drugs are on it.

7 So, again, I think that's a better  
8 question to take on-line. If you have specific  
9 questions with the State account situation,  
10 instead of ERISA, we'd be more than happy to look  
11 into that.

12 HEARING OFFICER CUTTER: We have fully  
13 funded also. But I think that's a credible issue  
14 on the fully insured side. I don't think that's  
15 just specific to the self-funded plans. We hear  
16 complaints about that from consumers all the time.

17 You know, Mike, I've tried all these other  
18 things and they didn't work and so my doctor gave  
19 me this one medication, which thank goodness is  
20 working, and now I find out that my insurance plan  
21 isn't going to cover it because it's not on the  
22 formulary any more.

23 So that was helpful for us to understand

1 and know. I hadn't even thought about the  
2 contract changes.

3 I don't know that the generic issue comes  
4 up as often as maybe some of the other reasons why  
5 plans will take medications off of their  
6 formulary, maybe the contract issue is more common  
7 in those circumstances.

8 DR. EMKES: You would be surprised though  
9 the number of patients where the brand name  
10 supposedly works perfectly but the generic  
11 doesn't.

12 HEARING OFFICER CUTTER: Yes.

13 DR. EMKES: I can't explain that, so don't  
14 ask me.

15 HEARING OFFICER CUTTER: Because it's my  
16 understanding that there's not supposed to be any  
17 pharmacological distinction; right?

18 DR. EMKES: Plus or minus a very small  
19 window.

20 HEARING OFFICER CUTTER: Okay, okay.

21 DR. EMKES: There is some allowance but it  
22 is a small window.

23 HEARING OFFICER CUTTER: Okay. And I

1 think that's fair because I think all of us would  
2 have to agree that with the advertising that takes  
3 place in major media these days, you know, in  
4 print, on television, on the radio about these  
5 medications and how wonderful they are, not that  
6 they're not wonderful, but you know people hear  
7 that.

8 In fact, my secretary was saying to me  
9 last week, we were talking about some health  
10 condition, and she said, I don't think I've ever  
11 heard about that.

12 And I said, well, how can you not have  
13 heard about it?

14 And she said, oh, when that sort of  
15 information comes on, I turn off the radio or the  
16 TV, or I just mute it or something, because I  
17 don't want to hear it, because I'm one of those  
18 people that if I hear it, I think I've got it. So  
19 I've just been a whole lot healthier if I don't  
20 hear about it.

21 So that's her way of coping with it.

22 Well, the reverse of that is also true.  
23 There are many of us who, you know, hear about

1           some medication or we think we have some condition  
2           or disease or the symptoms seems similar and all  
3           of a sudden we self-diagnose and we know we just  
4           have this issue and we go to our primary care  
5           physician and we say, you know, I think -- well, I  
6           did that to my doctor not too long ago. I said  
7           something about carpal tunnel.

8                     And she said, why do you think you have  
9           carpal tunnel?

10                    I said because it hurts here.

11                    She said, no, dear, you've just got  
12           rheumatoid arthritis.

13                    I said, oh, good, that's even worse.

14                             (Laughter.)

15                    So, you know, we're all guilty of that  
16           sort of thing.

17                    Yes, Holly wants to make some more  
18           comments.

19  
20                             HOLLY KING  
21                             M-PLAN

22                    I just wanted to add to what Dr. Emkes  
23           said. I mean that is exactly -- we have our

1 pharmacy, our PNT Committees that decide this, but  
2 I understand too that we're an insurance plan.  
3 We're competing, for instance, in the State group  
4 with the self-insured plan, so we have to be as  
5 constantly vigilant as any other administrator or  
6 employer.

7 You know, if they're looking in -- truly  
8 there are hundreds of changes everyday in these  
9 drugs, new ones come out, and patents go off, and  
10 you find out you can delete some and save money  
11 that way, so, you know, we have outbound call  
12 programs, we try and get to the physician or the  
13 patient first and get them on board with what will  
14 be more cost effective, but I guess the bottom  
15 line is, that, yes, it has to be medically  
16 effective, but we have to be very cognizant of the  
17 cost effectiveness of it.

18 So if it's going to be cheaper for us to  
19 take you off your drug and move you to something  
20 where you can split pills, you know, we're going  
21 to try and have that happen, but, you know, we try  
22 to do it in a friendly way.

23 MS. MALOOLEY: I didn't ask that just for

1 State personnel. I'm asking it because other  
2 people --

3 MS. KING: Understood.

4 MS. MALOOLEY: -- complain about calling  
5 the doctor.

6 MS. KING: Understood. And I'm just using  
7 you because you have both types of insurance  
8 plans, and I'm just saying that, bottom line, we  
9 have to be as cost-effective as any self-insured  
10 plan.

11 HEARING OFFICER CUTTER: Thanks, Holly.

12 Do we want to talk a little bit about  
13 what's happened in some other states in terms of  
14 this issue, kind of bounce that around.

15 MR. SEITZ: Yes.

16 HEARING OFFICER CUTTER: Yes, Dan.

17  
18 **DANIEL B. SEITZ**  
19 **BOSE McKINNEY & EVANS**

20 I'm Dan Seitz. I'm an attorney with Bose  
21 McKinney & Evans, and I'm the managing principal  
22 of Bose Public Affairs Group, which represents a  
23 number of entities including the Indiana

1 Association of Health Plans, which is primarily an  
2 HMO association that also has insurer members. I  
3 also represent individually Aetna and Humana.

4 I had hoped not to have to be at this  
5 rostrum, but I think there needs to be a little  
6 bit of clarification provided here to kind of  
7 bring this all back around to focus on what is  
8 doable and, trust me, as an increasingly older and  
9 more frequent user of the system, I have a lot of  
10 interest in what happens. So although I represent  
11 the payers, I've had a lot of experience in the  
12 last several years with providers. So I do  
13 appreciate the difficulties of the practice and  
14 the difficulties of providing quality care.

15 Let me start by saying part of the problem  
16 here, and the reason that we're in this room, is  
17 because I think today is a perfect example, this  
18 discussion has been all over the block. There has  
19 been no focus. Allegedly, we're talking about  
20 preauthorization but we keep going off into  
21 collateral areas. I think to find solutions we  
22 can only do what we can do. Unfortunately, the  
23 anecdotal information that we have received from

1           you, as providers, doesn't necessarily suggest a  
2           solution that is workable or that payers could be  
3           in a position to support.

4                   What we're trying to find is some middle  
5           ground here that we could support. I had talked  
6           to the Department earlier this week indicating  
7           that I think there was great sympathy, for  
8           example, for the issue of retroactive denial after  
9           precertification, and we felt that there were some  
10          examples in other jurisdictions that would  
11          possibly lend themselves to the development of a  
12          Department bulletin that would impact insurers.

13                   However, the anecdotal information here  
14          doesn't necessarily identify whether in fact it is  
15          an insurer, and let me define for you what an  
16          insurer is because I don't think you really  
17          understand that. An insurer, from our  
18          perspective, is an entity that assumes risk and  
19          pays claims based on that risk that they have  
20          assumed.

21                   The 40 percent of the market, or the 60  
22          percent of the market on the opposite side that  
23          Chief Deputy Commissioner Cutter mentioned, only

1 40 percent of the market today is insured. So all  
2 we can talk about in this room is what insurers  
3 do. We can't talk about what the other 60 percent  
4 of the market does, i.e., self-funded plans;  
5 companies such as Aetna, Humana, Signa, M-Plan,  
6 who may be providing administrative services only,  
7 those are ERISA services and they are exempt.

8 So when you give us this anecdotal  
9 information, I can't do a thing with my clients  
10 without understanding was this actually an insurer  
11 speaking or was this a company that also happened  
12 to be an insurance company that is representing a  
13 self-funded employer. And until you understand  
14 that distinction, we're not going to get very far,  
15 because if it is the insurer that is causing the  
16 problem, then we're in a position to do something,  
17 and the Department of Insurance and the  
18 Legislature can do something to that, and that's  
19 what we're really here in the room to talk about  
20 and hopefully find solutions.

21 But there again too we are straying all  
22 over the place with all kinds of problems, and  
23 it's understandable if I were a provider and had a

1 forum, I would be talking about everything under  
2 the sun too, because, again, I do appreciate how  
3 frustrating it is to try to practice and provide  
4 quality care today.

5 Let me just touch on a couple of things.  
6 The suggestion that there be -- and I'm wearing my  
7 attorney's hat now -- the recommendation that  
8 there be a central registry. I believe firmly  
9 that would be an anti-trust violation, and I don't  
10 believe it's feasible. The trade secrets of  
11 insurers relate to how we pay claims, the  
12 criterium in which we use to make those decisions,  
13 because we're in competition with one another. By  
14 law we have to do that. So if we put all that  
15 data you want up, so that anybody can go to it and  
16 see it, and anybody, includes any physician,  
17 employee of a physician, then we are in violation  
18 of the anti-trust laws both Federal and State.

19 MR. YODER: What kind of a central  
20 registry are you talking about that was suggested  
21 here? I'm not sure I know one was.

22 MR. SEITZ: You asked for a -- I'm sorry  
23 -- a central clearing house. I'm writing down

1           what you said at the very outset.

2           MR. YODER: I guess my suggestion was, is  
3           there a central way that the State can say, look,  
4           we have common medical practices, we have AMA  
5           guidelines, we have scientific guidelines, is  
6           there a -- it's not how you go about --  
7           preauthorization, prior approving, we're not  
8           talking about that --

9           MR. SEITZ: I understand that.

10          MR. YODER: What we're talking about, is  
11          there a central -- is there a way to simplify the  
12          whole process because as it is now, even within  
13          one insurer, it is not uniform. There are  
14          different programs, different policies, even  
15          within one.

16          MR. SEITZ: Are you talking about the  
17          insurer as an insurer, or the insurer as an  
18          administrator of a plan?

19          HEARING OFFICER CUTTER: Probably both.

20          MR. YODER: Yeah, I think both. And  
21          here's part of the problem though, as providers  
22          we don't know if the insurer is the insurer or the  
23          insurer is a payer, that is not clear.

1 MR. SEITZ: That may be something that we  
2 can deal with.

3 MR. YODER: And that's part of the  
4 problem, frankly, with the insurance industry.

5 MR. SEITZ: I absolutely agree, and not  
6 having sat in your shoes as having to deal with  
7 this on a daily basis, I can appreciate the  
8 difficulty of knowing who you're really talking  
9 to.

10 MR. YODER: So from our perspective as a  
11 provider, it's all the same, because we're dealing  
12 with you as the insurance company, the payer. How  
13 you divide your business beyond that, is your  
14 business.

15 MR. SEITZ: Well, actually it's your  
16 business too because, again, let me state that if  
17 all the insurer is doing is representing an  
18 employer, it is the employer that determines what  
19 the plan parameters is going to be and clearly  
20 there are going to be differentials between plans  
21 within an administrative services arena.

22 MR. YODER: However, our contract is with  
23 you, as the insurer, not with the employer.

1 MR. SEITZ: Well, I'm not going to get  
2 into that right now. I think that's a whole  
3 different discussion as to who your contract is  
4 with and what those contracts actually say. But I  
5 think that's another issue that's being discussed  
6 actually in another forum and we will be probably  
7 dealing with that too.

8 Let me just make a couple of other  
9 comments. But I do believe that there are  
10 anti-trust issues in some of the things that have  
11 been suggested here or at least the implication,  
12 as I heard them, would have required disclosure of  
13 information that is owned and developed and  
14 maintained by each company, and those are  
15 proprietary in nature.

16 MR. YODER: It doesn't have to go to that  
17 level.

18 MR. SEITZ: Okay. Well, I'm not sure how  
19 we get to where you need to be and not get to that  
20 level, because again 60 percent of the market is  
21 going to drive your problems and you're not going  
22 to touch them and you can't force anybody to do  
23 what you're asking.

1                   MR. YODER: But that does not mean that we  
2 ignore the other 40 percent.

3                   MR. SEITZ: I'm not saying that.

4                   What I'm trying to say is, we somehow have  
5 to find a way to focus on that 40 percent and  
6 figure out what is doable there. That's what I  
7 was suggesting, that we think that there may be  
8 some things that can be done to assist at least in  
9 some of the issues that have been raised. Okay.

10                  I know this issue of reductions has come  
11 up a number of occasions and I haven't seen  
12 numbers and I don't now that numbers actually  
13 exist except internally among those that need to  
14 be able to address those but part of my  
15 frustration representing the clients that I do, is  
16 being in a forum like this and not having the  
17 people here that can answer directly or respond  
18 directly, and there again my opening comment was,  
19 we are so broad in these discussions that it's  
20 physically impossible for us to bring all the  
21 people from each insurance company into this room  
22 so that we've got the right person to answer the  
23 question that may be raised, because formulary

1 decisions may fall in one area and there are  
2 certain people that are allegedly expert in that;  
3 medical directors may be involved in that, they  
4 are involved -- different medical director may  
5 have different functions with respect to others.  
6 We have claims people. We have underwriting  
7 people. We have all these people. So to bring a  
8 person here today that can answer all those  
9 questions is very difficult and we tried hard to  
10 try to get that done, and I think we may have done  
11 a better job last time than we were able to do  
12 this time, but I just want you to understand that  
13 that was not for the lack of interest or the lack  
14 of sensitivity to the problem.

15 I was struck a little bit by the issue of  
16 the gatekeeper. The insurance industry felt very  
17 strongly that this did hold a promise because we  
18 would have providers making the decision, but, of  
19 course, it was the provider community that went to  
20 war with the insurance industry in the Legislature  
21 in this State and very successfully killed the  
22 concept of gatekeeper, so you need to talk to your  
23 own colleagues about that.

1 I'll talk to you, if you want to talk  
2 about it. I'd be happy to talk to you later. I'm  
3 not going to get into that right now, that was a  
4 very brutal issue for a couple of years.

5 I just want to touch too on the waiver.  
6 As an attorney, and I'm not going to pretend to  
7 speak for providers' attorneys, but I'd be a  
8 little worried about a waiver list. Who is going  
9 to make that decision? You're going to have the  
10 same problem we've got now or you think you have  
11 now because each individual company is going to  
12 make that determination.

13 I know that there have been efforts and I  
14 don't think they've been wholly successful on the  
15 part of the State Medical Association to deal with  
16 some of these issues of how do you measure  
17 quality. I believe the Hospital Association has  
18 done a little bit, has had a little more success  
19 with that. But one of the things that we're  
20 sensitive to is that from your perspective, you  
21 start getting into questions of quality, start  
22 getting into questions, the very issues that  
23 Dr. Patterson raised, you know, I'm the one on the

1 scene, who is to tell me after the fact that what  
2 I did at that point in time knowing what I did,  
3 was wrong. Yet, that is what's implied or may be  
4 implied by having those kinds of systems.

5 So, I mean, I think the insurance industry  
6 would strongly embrace a very strong system which  
7 in some fashion indicated who the A-list providers  
8 were and who the outliers were, so that we could  
9 avoid those people.

10 So we're not necessarily opposed to that  
11 but I think you've got -- there again, you're  
12 opening up some issues that I don't think very  
13 many people are going to want to deal with  
14 particularly in front of the Legislature.

15 Am I right, Zach?

16 ZACH: Maybe.

17 MR. SEITZ: Oh, really, well, we'd be  
18 happy to work with you on that legislation.

19 That's really all I wanted to say. I just  
20 wanted to try to add a little perspective and not  
21 be up here lobbying you, but more to just say,  
22 look, this is a huge issue.

23 We've tried to have the right people here to

1 deal with preauthorization and that was what we  
2 were focused on.

3 We think that there may be some things  
4 that we can do in that regard. We have offered to  
5 work with the Department in that regard, that  
6 would be in the form of some bulletin that would  
7 essentially effect insurance companies in their  
8 insurance plans, and it would be similar to  
9 something that has been adopted in Idaho, and it  
10 basically says that the only reason you can have  
11 retroactive declinations are limited to some very  
12 specific things, such as what Holly mentioned, non  
13 eligibility, because at the time you called, you  
14 know, it's the employer that determines  
15 eligibility, not us, and the information we got on  
16 the day you called may indicate the individual is  
17 covered and we find out that in fact that person  
18 has been terminated but the paperwork hasn't  
19 caught up.

20 There may be non-payment of premium  
21 issues. There are some other, we think,  
22 reasonable exceptions, but we're more than happy  
23 to explore those at the appropriate time.

1 Thank you.

2 HEARING OFFICER CUTTER: Thank you, Dan.

3 I think he makes an important point about  
4 the ability to think in two worlds, the  
5 self-funded world and the insured world, because  
6 the providers unfortunately are going to be  
7 impacted in both of those situations.

8 Let me read you some of the different  
9 states, I'll go back to Idaho since Dan raised  
10 that in his comment. When prior approval of  
11 covered services has been granted, the managed  
12 care organization may not rescind the approval  
13 after the covered service has been provided other  
14 than in case of fraud, misrepresentation,  
15 non-payment of premium, exhaustion of benefits, or  
16 if the member is not enrolled at the time the  
17 service is provided.

18 So that gives the provider a pretty wide  
19 scope, I would say, other than any of these minor  
20 circumstances. I tried to thumb through these as  
21 he was talking. It looks as though most of the  
22 other states that have some sort of either  
23 statutory or regulatory reference to it, are

1 similarly worded. Some of them are much more  
2 detailed than that but that's the general  
3 overriding concept.

4 Just a show of hands for the providers and  
5 for the carriers that are in the room, is that a  
6 reasonable place to start?

7 (A show of hands.)

8 HEARING OFFICER CUTTER: Good.

9 MS. KORTY: Do you want to say a number of  
10 hands for the record?

11 HEARING OFFICER CUTTER: Almost half, did  
12 you think, of the folks that are in those  
13 categories probably -- no. I would say most of  
14 the folks in those categories raised their hand.

15 The other thing I was thinking as he was  
16 talking about the self-funded, which he used that  
17 other term, administrative services only, that's  
18 the same thing as the self-funded, in other words  
19 like the State plan, Anthem is our administrator,  
20 but as Dan said the State helps design what's  
21 going to be covered, what's going to be paid and  
22 what's not going to be covered and paid, and  
23 therefore in those kind of self-funded groups

1           you're going to get a huge variation from one  
2           employer to the other.

3                       Would it be helpful as a provider since ID  
4           cards are something that we also can address, that  
5           if you had some indication of that on an ID card  
6           would that make any difference? I mean I don't  
7           know, I'm just throwing things out here.

8                       Dr. Patterson.

9                       DR. PATTERSON: Well, it would make a  
10          difference in terms of how we explain to the  
11          patient. I mean it's one thing if you say to the  
12          patient, it is your insurance company that is  
13          doing this; it's another thing if you say it is  
14          your employer. They would look at that much  
15          differently.

16                      HEARING OFFICER CUTTER: Yes, that's  
17          absolutely true.

18                      DR. PATTERSON: And we frequently, as  
19          providers, tell the patient you need to try to  
20          influence the HR person of your employer.

21                      HEARING OFFICER CUTTER: Right.

22                      DR. PATTERSON: And that may or may not be  
23          appropriate.

1 HEARING OFFICER CUTTER: So maybe that's  
2 something we could incorporate into part of this  
3 recommendation that we make to the council since  
4 that would help you cope with some of the  
5 animosity that probably arises when the patient  
6 finds out that that's the circumstance.

7 If you knew it was a self-funded, if there  
8 was some indication on the ID card it was a  
9 self-funded group instead of a fully-insured  
10 group, I mean that's a beginning anyway. Okay.  
11 We will make note of that.

12 DR. EMKES: So would you be putting OWA on  
13 the card?

14 (Laughter.)

15 HEARING OFFICER CUTTER: Yes, Bernie,  
16 we'll use your designation, this is OWA, look out.  
17 You're on your own.

18 Any other comments to that?

19 Yes, Dr. Patterson.

20 DR. PATTERSON: I think Mr. Seitz'  
21 comments were good for providers to hear.

22 But I would simply remind you that at the  
23 last meeting I made a very concrete proposal that

1           you alluded to, which was, we take the outliers,  
2           which are a small number of people, and we  
3           confront them and say, look, is there something  
4           here we're missing as an insurance company?  
5           Because we want to separate out -- we all want to  
6           separate out the people who just got a CT scan,  
7           we've got hemorrhaging of the nail, none of us  
8           would agree with that type of treatment or that  
9           type of medicine, versus the person who had the  
10          different patient population or some other  
11          extenuating circumstances that might explain,  
12          quote, why they're over-utilizing a certain  
13          procedure. I'm talking about precertification  
14          here.

15                 That seems to me to be a much better  
16          process to look at selected people that are  
17          over-utilizing based on claims versus making an  
18          onerous system on every provider which is what we  
19          currently do. So I'd like to get some response  
20          from the insurance side as to why we can't do that  
21          because as a simple-minded straightforward  
22          physician, that seems a lot better than what we  
23          have as our current system.

1 HEARING OFFICER CUTTER: Well, I'm going  
2 to pick on Aetna if they're still with us..

3 Ladies, did you hear Dr Patterson's  
4 comment?

5 CHORUS: Yes.

6 MS. STEPHAN: Thank you, this is Bonnie  
7 Stephan, and I did.

8 Doctor, when we get questions or when  
9 questions have been directed to me, I would  
10 suggest for most physicians, someone that you  
11 might think is an over-utilizer based on your  
12 experience and your knowledge, when we talk to  
13 him, they believe their population is unique and  
14 he would be doing what he felt was appropriate  
15 care.

16 So it's difficult, you know, it's very  
17 very difficult to identify this 20 percent of the  
18 outliers and these 80 percent that everything they  
19 recommend or do is appropriate and the proper  
20 utilization of resources. We're open to  
21 suggestions.

22 MS. MALOOLEY: This is Jerry Malooley. As  
23 a carrier you have the authority to do on-site

1 claim audits and chart audits, and I know that's  
2 going on across the nation right now while we're  
3 working on this quality initiative, one of the  
4 four cornerstones from CMS. So couldn't you  
5 utilize your auditing to discern the type of  
6 patient that this physician is particularly seeing  
7 and treating? You could also use claims data.

8 MS. STEPHAN: I am not sure that if we  
9 think they're an over utilizer that we can go in  
10 and audit that physician.

11 MS. MALOOLEY: Yes, by contract, I believe  
12 you have the authority to do that.

13 MS. STEPHAN: Yes. I don't know that that  
14 would be practical in this day and age to go in  
15 and do an audit of every physician.

16 MS. SULLIVAN: A standard of practice to  
17 audit who is using what where? I don't know where  
18 that flows down.

19 HEARING OFFICER CUTTER: Well, I believe  
20 the question was in regard to the outliers.

21 MS. SULLIVAN: And it's identifying the  
22 outliers.

23 MS. KING: But who is going to be the

1 ultimate judge, then?

2 VOICE: And what do you do with them if  
3 you find out they are outliers? The money is  
4 already spent.

5 HEARING OFFICER CUTTER: Education.

6 I've been through this. For ten years  
7 I've been wrestling with this, yes.

8 DR. PATTERSON: You're judging us now,  
9 it's prospectively instead of retrospectively.  
10 We're not changing the judgment process. We're  
11 just changing whether it's prospective or  
12 retrospective in how it's done. The criteria is  
13 still the same. I don't understand your argument.

14 This is Dr. Patterson. It's the same  
15 criteria.

16 MS. STEPHAN: We're having a very very  
17 difficult time hearing all the comments.

18 DR. PATTERSON: Should I stand up?

19 HEARING OFFICER CUTTER: Please.

20 Did you hear what Dr. Patterson just said?  
21 Aetna, did you get to hear what Dr. Patterson just  
22 said?

23 MS. STEPHAN: No, we didn't hear the last

1           thing at all.

2                   HEARING OFFICER CUTTER: We'll repeat  
3           that. We're sorry.

4                   DR. PATTERSON: This is Dr. Patterson.

5                   Let me see if I can understand what you're  
6           saying and if I can articulate what I'm saying  
7           because I think we're saying the same thing.

8                   Let's take an example, let's say we have  
9           someone who comes in with low back pain. They  
10          hurt their back a few days ago and they have low  
11          back pain. They have no neurologic symptoms --  
12          you've done an examination, you see no neurologic  
13          symptoms and therefore based on the current  
14          criteria you would say they don't need a CT scan  
15          of their back, of their spine.

16                   Now whether you apply that criteria before  
17          the CT or after, it's the same criteria.

18                   Now the only argument is what was just  
19          made is, well, if we give the CT, then we've  
20          already paid for it, and I understand that. But  
21          that's not in that many cases, because remember  
22          we've already determined from the last meeting we  
23          had here that it's the minority of procedures,

1           it's the minority of precertifications that are  
2           denied, so we're talking about a small number  
3           here. And we're likely talking about people who  
4           are doing this over and over again. We're likely  
5           talking about people who got the CT scan and now  
6           everyone gets a CT who comes through the office,  
7           and we all agree in this room that's not  
8           appropriate. Those people are easy to detect in  
9           your claims data with the same criteria you would  
10          detect in a precertification, it's just after the  
11          fact, not before. But the bureaucracy now becomes  
12          less burdensome by a huge factor on physicians,  
13          and as our panel has said you educate those  
14          physicians. So it's not a matter of arguing over,  
15          well, who is doing what or can we agree on this,  
16          you use the same criteria.

17                 Does that makes sense?

18                 MS. STEPHAN: Yes, it does. Thank you,  
19                 and I was able to hear it. Thank you.

20                 I think it's an interesting point and it's  
21                 certainly something that we can take back to our  
22                 medical quality people and see if they're  
23                 interested and suggest that for those physicians

1 or other healthcare providers who are -- not the  
2 outliers -- who are using the resources, you know,  
3 in a reasonable way that there be some type of  
4 waiver, if you want to call it a waiver for the  
5 want of a better word, where they're not required  
6 to follow certain preauthorization requirement and  
7 it's for those physicians that appear to be  
8 over-utilizing resources to have somebody  
9 investigate that and be able to separate and put  
10 them on a pre-cert requirement.

11 You know, administratively, I can see all  
12 kinds of problems but it's definitely one of the  
13 reasons we like, if we can, to get physicians'  
14 perspective and see what's happening in your  
15 day-to-day practice and we'll certainly bring this  
16 back to our internal staff and our policy board to  
17 look at these issues.

18 MS. SULLIVAN: And the other thing I'm  
19 going to add is that the logic that led to the  
20 reduction of pre-cert requirements, so where that  
21 comes into play specifically to kind of pre-cert  
22 we can certainly step back and take a look at it  
23 and if there are particular instances where a

1 particular pre-cert is problematic we can give  
2 those specifics to the medical group as well.

3 HEARING OFFICER CUTTER: Thank you, Aetna,  
4 Thank you, Dr. Patterson. I think that was a very  
5 important exchange, actually. So we're going to  
6 focus on that potential process where providers  
7 who are not from a claims auditing perspective of  
8 using or over using particular category of  
9 services, which would have a pass or a waiver and  
10 then the insurer or the HMO, if that would happen  
11 on the HMO side for those providers who fall into  
12 that either abusive or over-using category could  
13 certainly initiate or create some gatekeeper kind  
14 of thing they have to go through in order to have  
15 the radiology services or whatever the category is  
16 that that provider is over-using, makes very good  
17 sense.

18 The second point is we will start with  
19 some similar considerations that we've just read  
20 you out of the Idaho code about not allowing a  
21 rescission of an approval of a pre-authorized  
22 service or treatment for other reasons than the  
23 ones that I read to you from the report.

1           Everybody seemed to be pretty much in agreement  
2           with that.

3                       The third piece would be the  
4           identification cards. If there's some way -- so  
5           the physician could address -- if there's some way  
6           for the insurers to indicate when it is a  
7           self-funded plan so that the providers can be able  
8           to make that explanation to the patient so that  
9           there's more understanding, I guess I should say  
10          on the patient's part that this is the employer  
11          decision, not an insurer decision.

12                      Honestly, I think ultimately, that will  
13          have a huge impact in terms of the patient's  
14          perspective or perception about the insurance in  
15          general and that's one of the things we've got to  
16          overcome. We have to make people understand this  
17          world as complicated as it is and how it works and  
18          why it works the way it does. I think that's a  
19          huge step in the right direction.

20                      Let's do this, let's touch on those other  
21          two or three things -- if I can find the agenda --  
22          that the Senate Bill enumerated so that if there  
23          are folks in the room that have concerns about

1           those issues or suggestions or recommendations or  
2           want to explore that topic, then we'll start that  
3           conversation today, because our next meeting,  
4           which is our last meeting, will be our wrap-up.

5           We'll bring up summarizations of these  
6           issues that we've just gone through and try to  
7           come to some reasonable recommendation for the  
8           Legislative Council.

9           All right. We didn't talk about the  
10          explanation of benefits form. Let me see by a  
11          show of hands folks in the room that think that's  
12          a conversation they want to have?

13          (Two people raised their hands.)

14          HEARING OFFICER CUTTER: We have a couple  
15          of folks that were concerned about that. Let me  
16          ask this question, specifically about the EOB, can  
17          you tell us, can you enumerate a couple of things  
18          that you think --

19          (Affirmative response.)

20          HEARING OFFICER CUTTER: Yes, please come  
21          up.

LINDA GATES-STRILEY  
CARE GROUP

I'm Linda Gates-Striley with the Care Group. On the pre-cert, preauthorization I guess one of the things we really didn't talk about, and I'd just kind of add to the list, it sure would be nice if the people we spoke with understood English well. That's an increasing challenge as this has been an outsourced function with phone lines that are down and it's very hard to explain a complicated cardiac procedure to someone who has just learned English; that's kind of difficult.

Another issue when it comes to the EOB or remit, I think if we could just agree to a standardized format of some sort, you know, something as simple as they're not in landscape. You know a lot of us are going to scanning systems and different ways, you know, shading -- if you could just eliminate shading, if you could get it going in the same direction, some pretty simple stuff, I mean it would be wonderful if we could get to the point where we sort of agreed on remit/remarks, how you would define those and

1 maybe come up with some consistency there too.

2 I think we're all moving to be as  
3 efficient as possible, electronic as possible, as  
4 automated as possible, so as many areas as we can  
5 get -- you need the same thing with insurance  
6 cards. I think everybody copies or scans an  
7 insurance card and if you have your nice beautiful  
8 shiny circle on there, well, that copies black and  
9 it's right over the number, so now we're having  
10 difficulty with that. So even on an insurance  
11 card, if they could just be black and white, or if  
12 you're going to put designs or highlights just  
13 don't cover required information with them.

14 So I think there are some other things  
15 that we could maybe do, if you could have the  
16 deductible amount on the card or the co-pay on the  
17 card. I think there's a lot of things with both  
18 cards and EOBs. There's some payers that process  
19 the EOBs and then we have to do the math, factor  
20 the write-off amount, you know, that seems pretty  
21 basic; here's the charge, here's the allowed and  
22 then another column which makes it very easy for  
23 someone who is processing claims, but when that's

1 not even there -- so I think there are some things  
2 we can maybe talk about and have some consistency  
3 that would be fairly easy to implement.

4 HEARING OFFICER CUTTER: Thank you.

5 I think those are all good points for us  
6 to throw into the mix as well.

7 The next one is timeliness, filing of  
8 claims by providers to insurers and HMOs. Now,  
9 we're going to switch tables on you guys. Now,  
10 the industry gets to whine about the providers not  
11 timely submitting claims. Do we have any of the  
12 folks from the industry that want to speak to that  
13 issue? Is that something that you see as a fairly  
14 prominent problem? Is it just an occasional  
15 infrequent thing?

16 (No response.)

17 HEARING OFFICER CUTTER: Nobody knows.

18 VOICE: We didn't raise it.

19 HEARING OFFICER CUTTER: I don't know who  
20 did raise it.

21 All right. I tell you what we're going to  
22 do --

23 MR. YODER: I'll speak to that. May I?

1 HEARING OFFICER CUTTER: Yes, absolutely.

2  
3  
4 MICHAEL YODER, CEO  
5 SOUTHSIDE FAMILY MEDICAL GROUP

6 Michael Yoder, Southside Family Medical  
7 Group.

8 Again, I would like to reiterate what was  
9 said about EOBs, it would be nice if we had  
10 everything in identical format. I don't think  
11 that compromises any laws or any type of  
12 collusion. I may be wrong, I'm not a lawyer.

13 On the insurance cards -- before I get to  
14 timely filing. On the insurance cards, you know,  
15 we are starting to scan cards and if we could have  
16 an identical layout, again it would just ease the  
17 flow of information, it would cut down on filing  
18 errors. You know, we can designate this part of  
19 the card gets scanned into the account number. We  
20 can designate this part of the card where the  
21 co-pay gets scanned into the co-pay field, so we  
22 get accurate information all the time, every time,  
23 put into the computer system. It seems pretty

1           basic.

2                   On the issue of timely filing. This is  
3           actually an issue that I raised. Actually, the  
4           doctors in our group raised this last year with  
5           ISMA about the issue of timely filing in Indiana,  
6           and it is left wide open. You'll find that  
7           insurance companies have different policies. For  
8           example, with Signa, in-network providers are  
9           actually penalized over out-of-network providers.  
10          In-network providers per their own web site have  
11          six months to file a claim. Out-of-network  
12          providers have 365 days to file a claim. TriCare  
13          has 60 days to file a claim. Different insurance  
14          companies have different guidelines on timely  
15          filing.

16                 You know we have issues where the patient  
17          may not give us the right information up front,  
18          and by the time we are able to track down that  
19          patient, get the information from the patient, and  
20          if we have a 45-day timely filing limit, we're  
21          past that filing limit.

22                 The patient says, can you please file it  
23          anyway, give it a try, see if they'll pay it. If

1 we file it, then we get the denial back, we are  
2 technically not supposed to turn around and bill  
3 the patient because we filed on their behalf.

4 Now, our argument with the patient on that  
5 point is, look, you did not give us the timely  
6 filing data. You know, we missed a deadline  
7 because you did not provide us with that  
8 information.

9 Senate Bill -- last year Senate Bill 147,  
10 which became law this past year, gives insurance  
11 companies a two-year limit to go back and request  
12 a refund from providers for errors that were made  
13 by the insurance company. What I would like to  
14 see is a similar amount of time for providers to  
15 discover our own errors, whether it's our mistake,  
16 whether it's because the patient did not provide  
17 us information, but give us time to find our  
18 mistakes, correct those mistakes, and refile those  
19 claims with the insurance company.

20 You know, it's not in our interest to hold  
21 those claims, and I understand that insurance  
22 companies need to close their books. At a certain  
23 point they need to be able to say, okay, look, our

1 books are closed, the losses are taken, you know  
2 we've paid out all we're going to pay for that  
3 period of time. That's a part of business you  
4 have to be able to close your books. At the same  
5 time we need that time, we need to be able to say,  
6 hey, look, I'm sorry, we missed it. Sometimes  
7 when you don't see a patient but once a year, you  
8 may not catch it until that patient comes back in  
9 the next year for their physical. So, again, I  
10 would like to see a two year timely filing limit  
11 uniform across the board for Indiana.

12 MS. STEPHAN: Hi, this is Bonnie Stephan,  
13 may I ask a point of clarification?

14 HEARING OFFICER CUTTER: Yes, ma'am.

15 MS. STEPHAN: Thank you.

16 We have several states that have a  
17 24-month or two-year period before --  
18 determination period before a claim is final; Ohio  
19 does, Kentucky does, I think, anyway, there's  
20 several of them. Anyway, when you're talking  
21 about a timely filing method, hopefully that is  
22 talking about finding mistakes and going back, and  
23 not the initial filing, because plans change. If

1           you wait two years to submit the claim, especially  
2           for a self-funded plan or even some insured plans,  
3           they may be gone with other carriers. Especially  
4           the self-funded, it could be outside of any monies  
5           that would be available to pay. So if you're  
6           going to go that route, I would suggest you have  
7           one for at least the initial submission and then  
8           for the two-year put that to correct anything,  
9           like the example you used.

10           That's all.

11           MR. YODER: Thank you. That is a good  
12           point that policies can change, plans can change,  
13           payers can -- companies do switch payers and I  
14           acknowledge that and you're right about that.

15           I guess my initial concept is for the  
16           initial filing, not simply an error correction.

17           You know, if we can have clarification on  
18           the issue, look, the patient gives us a United  
19           Health Care card and in fact they're an Aetna  
20           customer, we file with United Health Care, you  
21           know, they come back in next year, you know we get  
22           the rejection, we notify the patient that, you  
23           know, the plan didn't cover, they need to pay us.

1 Can we turn around and file with Aetna beyond your  
2 normal timely filing limit. You know, if we can  
3 get clarification and get something uniform across  
4 the board in that regard, we would appreciate that  
5 because as of now it seems to be hit or miss.

6 We will always turn around and try to  
7 refile with the correct insurance company but  
8 there does not seem to be any rhyme or reason as  
9 to whether or not it is accepted the second time  
10 around or it is rejected the second time around  
11 because of untimely filing.

12 MS. STEPHAN: Okay. Thank you. Point  
13 taken, and it's going to have to be something that  
14 we can administer on a broad level, and I don't  
15 know if you're speaking to Aetna or other  
16 carriers?

17 MR. YODER: Insurance in general.

18 MS. STEPHAN: Okay.

19  
20 MARCIE HART, OPERATIONS MANAGER  
21 ARNETT HEALTH PLANS, UHC

22 Hi, I'm Marcie Hart, from Arnett Health  
23 Plans, UHC, and I have a couple of things, you

1 have been jumping ahead, and I haven't had the  
2 opportunity to come up.

3 I think you raise a really good point  
4 about the cards and EOBs. What I think are your  
5 barriers that are going to come into play, that  
6 not all of your carriers are domiciled in the same  
7 state. They also have centralized printing areas  
8 and data bases that feed that information into and  
9 each state is going to have their own regulations.  
10 So the costs are going to go back to the employer.

11 I think what a good rule would be for --  
12 what was said, print it on black and white. Let's  
13 see what it looks like. I think that's one of the  
14 first thing that somebody should do, you know, and  
15 I think maybe the employer and the provider need  
16 to get together and maybe discuss this, maybe not  
17 in this forum, because, again, we're just talking  
18 about managed care plans, but looking beyond that.

19 HEARING OFFICER CUTTER: Thank you,  
20 Marcie.

21 I can certainly speak to that issue.  
22 Several years ago, before I was at the Department,  
23 one of the things that agents chafe about is that

1 every insurance company has a different  
2 application or questionnaire form that they  
3 require an employee to complete in order to even  
4 give an approximate pricing quote up front before  
5 that group agrees to accept it or any enrollment  
6 forms are completed, and every carrier has a  
7 different one.

8 So if you're going to try to help your  
9 employer pick a competitive product, then the only  
10 way you can do that is to have employees fill out  
11 six different forms for six different carriers and  
12 send them off to those carriers to get your  
13 pricing back.

14 We try, because of that situation, to go  
15 to some of the carriers that write more group  
16 business in the State, and we said, is there a way  
17 for us just to have a standardized health  
18 questionnaire that will give you the basic  
19 information that you need? It's not real  
20 detailed, especially in the small group market  
21 because they have to take them anyway because of  
22 the guarantee issue. What we were told was it  
23 wasn't that they didn't want to cooperate or they

1           were that tied to their own form, the problem was  
2           their internal computer system. Those forms are  
3           set up in certain order, those fields are in  
4           certain places on that page and those people that  
5           do the data entry are used to the way that it is  
6           structured and it matches their internal operation  
7           system.

8                     In addition to the points Marcie made, I  
9           would expect that would be part of the problem too  
10          in terms of standardization.

11                    Unfortunately, it's just one of the facts  
12          of life on a daily basis. Yeah, it's very  
13          frustrating dealing with that situation, but we  
14          will certainly consider that and see if there are  
15          any not-to-onerous opportunities to try to  
16          accomplish some of those things.

17                    I think the last issue we had concerned  
18          out of network providers being given reimbursement  
19          rate information after precertification of a  
20          service has occurred for the insurer, the HMO to  
21          notify them once that -- what that reimbursement  
22          rate is going to be. I need to see by a show of  
23          hands how many folks in the audience have a

1 concern about that or would like to discuss that  
2 any further.

3 (No response.)

4 HEARING OFFICER CUTTER: Okay. We won't  
5 talk about it.

6 DR. PATTERSON: Out-of-network providers  
7 see a patient and instead of getting paid they  
8 send the check to the patient and we have to run  
9 the patient down.

10 HEARING OFFICER CUTTER: Let me tell you  
11 why that happens because an insurance contract in  
12 the State of Indiana is predicated on a  
13 reimbursement process, which says the insurance  
14 contract -- if I'm in a group policy, I'm a  
15 certificate holder, and the group policy says that  
16 I'm supposed to go out, get treatment. I'm  
17 supposed to pay and then the master policy or the  
18 insurance policy is supposed to reimburse me.  
19 They are all worded that way. So as a legal  
20 contract they are a reimbursement arrangement, not  
21 a direct payment to a provider.

22 What the providers have done over the  
23 years, and I can't say I blame them, is they went

1 to the insurers and said you guys, you know,  
2 you're sending all this money to the patients and  
3 we never get it or we don't get the portion we're  
4 supposed to get.

5 So the insurers agreed to an assignment of  
6 benefits, which is something that you guys have  
7 every patient sign when they come in, you probably  
8 do it more than once, which says, an insurance  
9 company, I, the patient, have told the insurance  
10 company they have my permission to pay you the  
11 money instead of sending it to me.

12 So an out-of-network provider is simply  
13 functioning under the process as the legal  
14 contract stipulates and because they're an  
15 out-of-network provider, they don't have an  
16 opportunity to do an assignment of benefits  
17 because the insurance company wouldn't recognize  
18 it anyway since they're not part of their  
19 contracted network arrangement.

20 I mean that doesn't help the fact that you  
21 don't get the money. I just wanted you to  
22 understand why that process takes place the way it  
23 does. I know there have been some efforts by some

1 organization to try to force insurance companies  
2 and HMOs to accept assignment of -- well, an HMO  
3 wouldn't have to do that -- but to accept an  
4 assignment of benefits for out-of-network  
5 providers. I know that's a topic that's come up a  
6 couple of times in the last couple of years. I  
7 don't know that it ever got anywhere but I know  
8 it's been raised.

9 Anything else that anybody has? Are you  
10 dying, you guys? It's miserable in here. I  
11 apologize. We were so excited because we thought  
12 we had the big room today but the temperature has  
13 just been horrible even with the door open, so I  
14 apologize.

15 I guess that's it unless anyone has any  
16 other comments they want to make.

17 MS. MILLER: I'd like to say something.

18 HEARING OFFICER CUTTER: Yes.

19 MS. KORTY: While she's walking up, I just  
20 have one point of clarification, your agenda has  
21 Linda Merkl of Associated Reporting, and that's  
22 actually Accelerated Reporting. It's very  
23 confusing because Associated Reporting was here

1 last time, but if you're trying to reach Linda,  
2 call Accelerated.

3  
4 LORI MILLER

5  
6 My name is Lori Miller. I'm here today to  
7 represent the public. I don't think anybody was  
8 here last month and I don't think anybody else is  
9 here this month.

10 Basically, I came here to learn and to  
11 listen and to hopefully find out if what this  
12 study was doing was going to coincide with  
13 something I'd like to see happen.

14 I listened to the providers talk about  
15 their problems with precertification and the  
16 insurance companies, and I guess we're all  
17 patients here, so I guess you know what a  
18 precertification means to a patient, which is  
19 pretty much absolutely nothing. I mean it's  
20 certainly no guarantee of payment.

21 All these forms -- the preauthorization,  
22 the precertification, EOB, the ID cards, you know,  
23 they're basically all from where I stand -- I mean

1           you're all the experts, but for me, they're all  
2           contracts that are probably more than likely --  
3           I'm just making an assumption -- written by an  
4           attorney and they're probably crafted by an  
5           attorney in the best interest of the insurance  
6           companies, and that's fair enough, you know, they  
7           need to protect their interest and protect against  
8           fraud and limit liability and reduce the cost of  
9           insurance.

10                   But what I want to know is where are the  
11           protections for me and for you and for the  
12           provider? That's what I need. Right now I'm in  
13           the middle of my own insurance nightmare and it  
14           all relates to forms and administration, and I  
15           need help. What I need is, I need a law that will  
16           provide some type of protection, not to take  
17           anything away from the insurance company, but  
18           something that will help protect the other  
19           thousands of people in Indiana right now who  
20           purchase insurance that could find their self in  
21           my exact situation, and that's a place where you  
22           just don't want to be right now, trust me.

23                   I really truly believe that this

1 standardization of forms, I know it might cost a  
2 lot of money to do, maybe there's some reason you  
3 can't, but I truly truly believe that would be  
4 something that would help providers, it certainly  
5 would make things simpler for small businesses and  
6 for purchasers of insurance.

7 I'm glad that you're all here.

8 Thank you.

9 HEARING OFFICER CUTTER: Thanks, Lori.

10 Anybody else? Any final comments before  
11 we dismiss and everybody runs out of here to the  
12 air conditioning?

13 (No response.)

14 Thank you all for coming. We appreciate  
15 your time.

16  
17  
18  
19  
20  
21  
22  
23 (Hearing ended 3:00 p.m., August 22, 2007.)

STATE OF INDIANA       )  
                                  ) SS:  
COUNTY OF HAMILTON    )

I, Linda R. Merkl, a Shorthand Reporter  
and Notary Public, in and for the County of  
Hamilton, State of Indiana, do hereby certify that  
the foregoing hearing was taken on behalf of the  
Department of Insurance, in the matter of SB 372,  
beginning at 1:00 p.m. on the 22nd day  
of August, 2007;

That said hearing was taken down in  
stenograph notes and afterwards reduced to  
typewriting under my direction; and that the  
typewritten transcript is a true record, to the  
best of my knowledge and belief;

IN WITNESS WHEREOF, I have hereunto set  
my hand and affixed my notarial seal this 4th day  
of September, 2007.

Notary Public  
Residing in Hamilton County

My Commission Expires:  
January 27, 2009

## Topics for IDOI Study Committee

8/22/2007

### 1. Radiology Pre-cert processes

### 2. Pharmacy Pre-cert processes

There is no question the costs of health care are rising and must be addressed. Society cannot afford all the rapid advances in diagnostic testing, pharmaceutical products and end of life care that the 'sick care' system is today providing.

However, there are processes being put in place today that make little to no sense, place patients at risk, and promote inferior care under the guise of health cost reductions.

I am a physician. Physicians are trained to diagnose and treat patients. While there is a great deal of science in medicine, the term *art of medicine* is still most frequently used to describe a patient - doctor interaction. Decisions about health care are made between a doctor and a patient, taking into account past history, psycho-social situation and other intangible factors.

Part of the problem of rising health care costs has been the rather complete disconnect between costs of health care and the end user of health care services. I do not really care what a service costs, as long as someone else is paying for it. And as an added feature, the negative side of numerous radiation exposures and the risks of surgical procedures are often underplayed. These facts have led to over-utilization of health care services, and in my mind are the reasons for the current push to *consumer driven health care*.

But currently the reaction to high health care costs is to place as many barriers as possible to influence patient - doctor decision-making, and all too often that falls on the doctor - not the patient.

Radiology and medication pre-certification processes have become so cumbersome that, as a health care system, we have heard an outcry from our doctors and their medical office staffs. The extra time on the phone to get the

**EXHIBIT**

LM / 8/22/07

proper “mother may I” is overwhelming to many offices. At least two insurance plans are now directing care to lower priced providers. One can only hope that quality is evaluated prior to this transition of care. That concept in itself is somewhat scary for patients who assume all quality is the same. Once insurance plans begin to direct the care, they are indeed deeply involved in the medical decision making process, and that may be a breach of the Indiana practice act regarding the corporate practice of medicine.

But a second piece of this story is even more bothersome. Not having processes in place to rapidly approve necessary services, and quoting policy as a reason for delays is placing Indiana patients at risk for bad outcomes. And for what? One reads about increasing insurance company profits and ever larger CEO bonuses? How again does that improve patient care? Patients with serious or even potentially serious conditions need tests to confirm or refute those devastating illnesses. Delay in approval for those tests is placing Indiana citizens at risk for worsening conditions, increased pain and suffering, delay in definitive diagnosis and even death.

Plans point to the radiology pre-cert vendor. The vendor says they are only doing what the contract services agreement calls for. What is going on? Who will need to have a bad outcome before some reason is brought back into the system? And that is just the radiology issue.

Now to tackle pharmacy pre-cert requirements.

We fully understand rapidly increasing costs in pharmacy. New drugs, with patent protection, are more expensive. And “me too” new drugs do not add a lot, except to protect high profits. Generics are cheaper and often effective, but not for all. We all need and want that new drug that works for us when we get sick.

There might even be a place for pre-certification of new or narrowly used pharmaceuticals when prescribed by physicians not accustomed to their use. However, highly trained specialized physicians need to have access to the best - the newest – and yes, the more expensive medications. Older medications work in many patients, but by the time a patient gets referred to a sub-specialist, most of those medications have been tried and have failed, or are incompletely controlling the problem. Perhaps if a correct drug were easier to get, even the referrals would decrease.

And there is also the issue of compliance. Will a teenager take even one dose a day, and how low will compliance become if we ask him to take two doses of a less expensive medication. They say the most expensive medication is the one that does not get taken. How does that balance with newer, safer, once a day medications compared to older less expensive medication not taken?

I am personally a conservative by nature. I am reluctant to ask for any government intrusion into processes impacting physician and patients. Yet the situation is rapidly reaching a boiling point. When artificial processes interfere with good patient care, I have to speak out.

Thank you for the time and for listening.

Bernard Emile MD,

## **The Dark Side of Health Insurance Plans**

8/22/2007

Citizens of Indiana beware! There is an insidious process occurring through many of your insurance plans that is supposed to reduce your costs for health care. In certain instances, these processes, designed to save money, may actually be putting your health at risk. While the process is purported to save you money, insurance plans also increase their own profits by building hurdles to appropriate and necessary care. This is very concerning to physicians trying to provide Indiana citizens' proper and timely health care. However, CEO's of these large companies must need your insurance dollars more than doctors, hospitals and other health care providers – most of you have seen the reported bonuses paid to some of these CEO's.

The issue is this. Many large insurance plans are requiring a “mother may I” pre-certification process for radiology services. This process is required for all services except those ordered in the Emergency Room. While many would agree that elective tests can be run through such a process to substantiate the need for the test, there are, or at least should be, exceptions.

When your physician feels a test is needed immediately, at least one contracted radiology pre-certification plan is stating they have 4-24 hours to approve that test needed STAT (now). Most physicians would feel this is a blatant obstacle, totally inappropriate and a threat to the good care your doctor is attempting to provide. Your safety as a patient could be threatened by this requirement. The plan will not pay a provider for the test if proper pre-certification is not obtained. That may also place you as a patient at risk for paying the full bill should you and your doctor decide to go ahead and get the test without the pre-cert.

So if you show up at your doctor's office with a possible blood clot in your leg, abdominal pain of unknown cause, or a head injury (something less than being completely unconscious), you may not be able to get the proper test you need immediately under this new process. Delaying diagnostic services in cases such as these places your health at risk, and also increases risk for further damage or harm – and even death.

One plan has had the audacity to suggest “If they need the tests that badly send them to the Emergency Room”. That is so counter-intuitive as to be ridiculous. Send a patient to the highest priced services available so as not to disrupt an insurance company pre-certification process! How absurd does that sound? A primary care physician serves patients. They are well trained to test, diagnose and treat most medical conditions. Let them do their jobs. In an effort to reduce costs, this poorly implemented pre-certification process may actually drive up your costs as a patient if you are being evaluated twice for the same problem, and one of those exams is in the ER, with co-pays and the higher costs to you associated with that process.

So how can this be fixed? It actually is fairly simple, or so it would seem. Processes need to be streamlined and simplified. If a physician – not just an ER physician - examines a patient and feels a diagnostic test is needed immediately, there needs to be a process for that to occur, and for there to be some assurances of proper payment for emergent or urgent services provided in good faith. This process improvement is needed to provide appropriate care to citizens of Indiana. To allow insurance plan processes to delay necessary care to the possible detriment of patients should be intolerable, but that is exactly what is happening today.

Citizens beware! Your health plan may be hazardous to your health.

Bernard J Emkes M.D.

Dear

National Imaging Associates, Inc. (NIA) reviews certain radiology requests to determine if they are medically necessary and a covered service under the CIGNA HealthCare\* benefit plan.

We received a coverage request on Jun 04, 2007 for the following service(s):

Sinus CT

After review of the information submitted and the terms of your benefit plan, we have determined that the requested services will be covered. Your request has been approved for the above listed services if you are enrolled and eligible for benefits on the date(s) of service.

All benefits payable are subject to your benefit plan's provisions, limitations, and exclusions in effect at the time services are performed. The amount of your copayment or coinsurance may be impacted by the provider chosen. It is important for you to know this letter does not guarantee payment of benefits under your health benefit plan if you are not enrolled and eligible for benefits on the date(s) of service. Please refer to your benefit plan documents to get additional details about your benefit plan coverage.

P R O C E E D I N G S

HEARING OFFICER CUTTER: Thank you all for coming. We do appreciate your attendance, and hopefully the comments that you'll make this afternoon as we go through this last process.

Anybody who does not have an agenda, because we've got the agenda and then another follow-up -- Okay, everybody's good.

Tina, Jerry and I spent some time together over the last few weeks since we had the last meeting trying to, sort of, summarize and pull together, because we just covered so much information from so many different directions. Honestly, it was really, really helpful, even though I'm sure there were times when it seemed repetitive. It was still very helpful for us to really get a good grip on some of the technical issues with preauthorization to precertification processes; as well as on the provider side, some of the frustrations and difficulties that you folks have to cope with in using this kind of

1 procedure for your patients.

2 So, the first thing we thought we'd do  
3 would be to kind of review some of the comments  
4 that we had that we tried to categorize. And  
5 one of the first steps, probably the most  
6 important step, would be for us to look at some  
7 language that we had proposed by a couple of  
8 different interested parties in terms of, you  
9 know, maybe a place to start from.

10 We've also looked at other state laws  
11 that have similar kinds of requirements for  
12 preauthorization, kind of standard procedure.  
13 We don't think we're too off the mark with  
14 this. But we'd just like you to read through  
15 this.

16 Let's talk about Paragraph 1 first, and  
17 then we'll address Paragraph 2 separately.  
18 Anybody at this moment have any feedback on  
19 Paragraph No. 1, the proposed language?

20 Cool. I am going to take that as a  
21 yes.

22 You know, you may have some other words or  
23 substitutions or questions about definitions or

1 something, please raise those if you do. We  
2 are trying to be as simple and yet as specific  
3 as possible without being burdensome, and that  
4 is not always easy to do. So, you know, if any  
5 of you have issues in any of those areas about  
6 this language, go ahead and please let us hear  
7 your comments.

8 All right. So if I was going to ask  
9 you guys to vote, how many would vote for the  
10 language in Paragraph 1? How many would vote  
11 against the language in Paragraph 1?

12 Well, good.

13 For the record, that was about half  
14 the room voted for, nobody raised their hand  
15 against.

16 HEARING OFFICER CUTTER: Right.

17 The second paragraph came about as a  
18 discussion in terms of this sort of  
19 circumstance does happen. I don't know -- I  
20 can't give you any examples of frequency, but  
21 it makes it difficult for the providers who get  
22 into an evasive procedure of some sort and find  
23 another additional problem. Rather than

1 completing the procedure for the first problem,  
2 and then having to go back and say, okay, we've  
3 got another problem. We're going to have to  
4 reopen him, blah, blah, blah, which I think for  
5 most of us, especially as a patient, would  
6 think that that's probably not a very good use  
7 of our time and money. So we wanted to propose  
8 in the second paragraph, to see what your  
9 feedback was with this.

10 So kind of look through it and then  
11 let's hear comments if anyone has any, or  
12 suggestions or recommendations or changes or  
13 concerns about the issue.

14 Yes, ma'am. Would you stand up,  
15 honey, because she's got to hear you.

16  
17 MARCIE HART, MANAGER OF OPERATIONS

18 ARNETT HEALTH PLANS

19  
20 I'm Marcie Hart, Arnett Health Plans.  
21 I represent an HMO. I think as an HMO we might  
22 have difficulty, especially when using non  
23 network providers and facilities. I think that

1 we would have to put much better explicit  
2 medical necessity, we need to call that  
3 emergent. We need to get emergency in there.  
4 Because a lot of things may be medically  
5 necessary, but they don't necessarily mean  
6 emergent.

7 HEARING OFFICER CUTTER: I see. So  
8 it's not an urgent issue?

9 MS. HART: Right.

10 HEARING OFFICER CUTTER: Do you prefer  
11 the word emergency or urgent or is there  
12 another term that would be --

13 MS. HART: For us it would be  
14 emergency.

15 HEARING OFFICER CUTTER: It would be  
16 emergency.

17 Yes?

18 ROBERT CLUTTER, MD

19 INDIANA ACADEMY OF FAMILY PHYSICIANS

20  
21 Well, I'm Bob Clutter. I would have  
22 to say I looked at that, and to me that is just  
23 -- of course, if you're doing a certain

1 procedure and another procedure needs to be  
2 done, you do it. You're not sitting there  
3 saying is this preauthorized or not. You've  
4 got to give the physician some credit for doing  
5 their job. And for you to say, well, sorry,  
6 that wasn't authorized.

7 So it's okay to take the appendix out  
8 but that ovarian tumor, well, that could have  
9 waited for another day. That's ridiculous.

10 I don't care what the circumstances  
11 are, you've got to give your physician some  
12 credit, and that kind of micromanaging just  
13 doesn't belong.

14 I would say the language is fine.

15 HEARING OFFICER CUTTER: Anyone  
16 else have any other comments or concerns about  
17 that second paragraph?

18  
19 DAN SEITZ, MANAGING PRINCIPAL

20 BOSE PUBLIC AFFAIRS GROUP

21  
22 Dan Seitz, S-E-I-T-Z. I'll give you  
23 my card.

1 I am going to have to respectfully  
2 disagree with the doctor.

3 MS. KORTY: We have a sign-in sheet  
4 going around.

5 MR. SEITZ: This is a brand new  
6 concept that we have not had the opportunity to  
7 discuss.

8 MS. CUTTER: Right.

9 MR. SEITZ: So this is the first time  
10 we have seen this. And I have not had the  
11 opportunity to discuss this with any of my  
12 clients. So, number one, there's no way I am  
13 going sign off on this until such time as that  
14 occurs.

15 Second of all, how does one know that  
16 it's covered procedures at the time? You  
17 don't.

18 Third of all, I agree with the doctor  
19 that any good physician, I would think, is  
20 going to do what is necessary at the time.  
21 What is necessary to be done and payment under  
22 an insurance plan, unfortunately, are not  
23 necessarily equated to one another. It seems

1 to me your responsibility as a physician is to  
2 take care of the problems without regard to  
3 whether you're going to get paid or not get  
4 paid.

5 This, in effect, is a mandate that  
6 says you've got to be paid, no matter what  
7 you've done, whether in our view it's medically  
8 necessary, number one.

9 Number two, whether it was necessary  
10 at the time.

11 And number three, whether in fact it  
12 was or was not a covered benefit.

13 So those are just some of the things  
14 that I've thought of as I sat here and just  
15 tried to absorb this.

16 MS. KORTY: Would it be more  
17 tolerable, and I know you can't speak for  
18 everyone again, if it said something to the  
19 effect of coverage may not be denied solely for  
20 lack of preauthorization? That can't be the  
21 only basis for the denial. As if the insured  
22 determines that it also was medically necessary  
23 covered by the plan.

1 MR. SEITZ: I think that would help.  
2 Again, I'm going to have to talk to some  
3 folks.

4 Where are you on inserting solely?

5 MS. KORTY: Probably after the word  
6 denied. Solely for lack of preauthorization.

7 MR. SEITZ: By the way, there's a typo  
8 in here. If a provider performs and  
9 additional. Is that and additional?

10 HEARING OFFICER CUTTER: An.

11 MR. SEITZ: A?

12 HEARING OFFICER CUTTER: A-N.

13 MR. SEITZ: An additional.

14 MS. KORTY: And an additional.

15 MR. SEITZ: Coverage may not be denied  
16 solely --

17 MS. KORTY: Solely for lack of  
18 preauthorization. That's just off the cuff,  
19 but something to that effect.

20 HEARING OFFICER CUTTER: Other  
21 comments?

22 Yes, ma'am.

23

LINDA BARRABEE, REG VP OF NETWORK  
ANTHEM BLUE CROSS AND BLUE SHIELD

Linda Barrabee, Anthem Blue Cross Blue Shield. I have to agree with Dan. We haven't seen that language before.

Where I have a concern is, we will do predeterminations today for a physician when we see something that is going to be a covered benefit only when it's a medical necessity. What we find sometimes, when the claim comes in is a different procedure than what they asked for predetermination that they'll send in, it will be denied as being experimental, not medically necessary, show us that letter, it's two different things. And that concerns me a lot.

MS. MALOOLEY: Are you saying that would be the norm?

MS. BARRABEE: Right, right. But this would tell us we would have to pay it, regardless.

MS. KORTY: But if there was not a

1 different procedure performed but an additional  
2 procedure, would you still go ahead and pay for  
3 the procedure that was preauthorized?

4 MS. BARRABEE: The one that was  
5 preauthorized?

6 MS. KORTY: Yes.

7 MS. BARRABEE: Yes. It's the  
8 additional. If we authorize one procedure, we  
9 would pay for that. But what we found in some  
10 cases is it's either an add-on that wasn't sent  
11 in or it's a different case, it's close.

12 HEARING OFFICER CUTTER: The whole  
13 case is different?

14 MS. BARRABEE: Well, we have had  
15 gastric bypasses, and there are different kinds  
16 of gastric bypasses. And so a preauthorization  
17 will come in for one type and then another type  
18 will be done that may be considered  
19 experimental and not covered. Well, but you  
20 said they had coverage for gastric bypass.  
21 Well, you're correct, they did, but not that  
22 type.

23 HEARING OFFICER CUTTER: Do you not

1 specify that?

2 MS. BARRABEE: Yes, we do.

3 HEARING OFFICER CUTTER: If you  
4 specify -- if your approval is specific, then  
5 they don't have a leg to stand on.

6 MS. BARRABEE: Correct. But it's  
7 harming that situation. But I got it -- I had  
8 it preauthorized. Now I have to pay it and it  
9 might be experimental, it could be something  
10 that's maybe not a covered benefit or maybe  
11 wouldn't have been approved to begin with.

12 HEARING OFFICER CUTTER: Yes,  
13 Dr. Clutter.

14

15 ROBERT CLUTTER, MD

16 INDIANA ACADEMY OF FAMILY PHYSICIANS

17

18 I can understand that situation where  
19 you've been approved for one and maybe another  
20 one that's experimental would not be covered.

21 I guess the issue is if you're doing a  
22 procedure and if you do something while you're  
23 there that wasn't preauthorized, but if it

1 would have been covered, something appropriate  
2 that would have been covered, then we need to  
3 have some kind of language so you get paid, and  
4 you can't just dodge the bullet because you  
5 didn't do that.

6 And I would like -- I would also like  
7 to have some examples of situations where maybe  
8 that has occurred. Where they did something  
9 that was approved at the time and they did an  
10 additional procedure and then it was denied.  
11 If we could have some examples of something  
12 whereby, maybe, legitimately, it shouldn't be  
13 paid because it was unnecessary. It's hard for  
14 me to make that decision. I think some  
15 examples would be helpful.

16  
17 LINDA BARRABEE, REG VP NETWORK

18 ANTHEM BLUE CROSS AND BLUE SHIELD

19  
20 And to address, if you did a procedure  
21 would you go back and pay that?

22 I need to check with our precert  
23 because there is always that appeal right

1           though the precert. It might be that we need  
2           to go back and review that, see that it was  
3           medically necessary and we're going to pay for  
4           it. Not deny it just for the fact that you  
5           didn't get a precert.

6                     And your example of, I went into the  
7           appendix and I saw a tumor. By all means, we  
8           want you to use your medical judgment to take  
9           care of that.

10                    But I need -- I think that, that would  
11           go through our appeal process, and likely the  
12           medical necessity would be met and it would be  
13           covered. But I need to check on that. I don't  
14           remember.

15                    HEARING OFFICER CUTTER: I have a  
16           question about that. I'm glad you went there.  
17           In terms of the procedure, because I don't  
18           think I'm clear on that. You talk about going  
19           through the appeals procedure. For me that  
20           means after the fact the patient files a  
21           grievance. Is that the same appeals process  
22           you're talking about or is there a separate one  
23           for preauthorization?

1 MS. BARRABEE: It goes through the  
2 same -- we have two processes: One when  
3 somebody gets denied for prior authorization  
4 that is really going to be before the service,  
5 and that can be appealed.

6 HEARING OFFICER CUTTER: Does it have  
7 to go through the same time line that the  
8 grievance and appeals procedure stipulating the  
9 statute?

10 MS. BARRABEE: Yes. It still has to  
11 go through that but those are turned around  
12 pretty quickly. Especially when we have a  
13 patient that needs to have surgery, we are  
14 going to make sure it gets turned around pretty  
15 quickly. It doesn't go through the same slow  
16 process as the other people, no.

17 HEARING OFFICER CUTTER: So you do --

18 MS. BARRABEE: Yes.

19 HEARING OFFICER CUTTER: -- filter  
20 those out?

21 MS. BARRABEE: And then the other one  
22 is after the fact --

23 HEARING OFFICER CUTTER: Right.

1 MS. BARRABEE: -- with the appeal.

2 And it might very well get paid. But I'll need  
3 to check on that.

4 HEARING OFFICER CUTTER: Right. And  
5 that's okay, I understand. I just kind of  
6 wanted to get some clarification about that.

7

8 DAN SEITZ, MANAGING PRINCIPAL

9 BOSE PUBLIC AFFAIRS GROUP

10

11 Dan Seitz, again. I, too, would like  
12 to have samples of the circumstances that  
13 require this language. Because I think this is  
14 very rare. This is happening when, in fact,  
15 it's a procedure that is done because of  
16 something that's legitimately discovered in the  
17 process of one and it's something taken care  
18 of. Because I have trouble believing that  
19 really should be a problem. But that's not to  
20 say it isn't. I'd just like to know from  
21 whom.

22 HEARING OFFICER CUTTER: Is there any  
23 way for us to get some of that information,

1 Elizabeth?

2 MS. MALOOLEY: Uh-huh.

3 HEARING OFFICER CUTTER: Okay, that  
4 would be great.

5 Yes, ma'am?

6  
7 MARCIE HART, MANAGER OF OPERATIONS

8 ARNETT HEALTH PLANS

9  
10 I manage one of the claims shops at  
11 Arnette, and typically if an authorization is  
12 not matching up to the claim, there is usually  
13 processes to sum up whether a patient would be  
14 approved or denied. It will be looked at for  
15 medical necessity and if more information is  
16 needed, we'll ask for it, and they can't deny  
17 it.

18 HEARING OFFICER CUTTER: So that does  
19 make it a little quicker process?

20 MS. HART: Yes.

21 HEARING OFFICER CUTTER: One of the  
22 things that we kind of talked about at each of  
23 the meetings was, we were hoping to get from at

1           least one or two of the insurers some kind of  
2           feedback in terms of savings.  Although I think  
3           Anthem did give us a ball-park number, maybe  
4           that first meeting in terms of, you know, when  
5           they took it away and then when they brought it  
6           back.  Would you mind repeating that for me,  
7           honey, because I did not write that down and  
8           that would be a little helpful.  Again, just  
9           ball park.  I understand if they're not --

11                   LINDA BARRABEE, REG VP NETWORK

12                   ANTHEM BLUE CROSS AND BLUE SHIELD

14                   You didn't miss it because I didn't  
15           have the specifics with me at the first one.

16                   We do have from our radiology, and  
17           these numbers are specific to radiology.  But  
18           prior -- at the end of 2004, when we did not  
19           require a precert, our radiology transferred 14  
20           percent.  They have gone down substantially.  
21           Right now they're looking at, and this is fully  
22           insured local group business for Indiana, it's  
23           about, since we put this in place, about a \$5.8

1 million impact.

2 And this is the sentinel effect. This  
3 is not denial that someone calls in. Because,  
4 we talked about that last time. We don't deny  
5 that many services. This is that sentinel  
6 effect.

7 HEARING OFFICER CUTTER: Can you tell  
8 us what that 5.8, how that offers any basis in  
9 relation to the 14 percent figure that you gave  
10 us? That would give us a little better -- I  
11 think.

12 MS. BARRABEE: When looking at the  
13 trends, I'm looking at what the cost of those  
14 services on a per member, per month basis. So  
15 it dropped from where it was --

16 HEARING OFFICER CUTTER: Is there a  
17 number there, instead of a percentage there?

18 MS. BARRABEE: I'm looking to see, our  
19 actuary didn't give me an exact PMPM number. I  
20 can get that from him if we want the PMPM.  
21 He'd given me 30 million for the whole midwest  
22 and then gave me Indiana 5.8 million. 5.8  
23 million and that's only for fully insured.

1 HEARING OFFICER CUTTER: And that's a  
2 decrease?

3 MS. BARRABEE: Correct. So, that  
4 would go right back in the claims cost.

5 HEARING OFFICER CUTTER: Okay.

6 MS. BARRABEE: On the regular -- that  
7 was on radiology alone.

8 On the precert overall, he pulled --  
9 our actuarial person pulled some Milliman  
10 information, and said that a full package of  
11 precert, which is pretty robust, is going to be  
12 about 5.5 percent savings. So he applied those  
13 numbers to ours and said that by applying those  
14 numbers to our claims payments that's about  
15 \$135 million.

16 MS. KORTY: \$135 million since 2004?

17 MS. BARRABEE: No. This is using  
18 Milliman on our entire precert process. So if  
19 you took away precert code today, the way it is  
20 today, your cost could go up by some \$135  
21 million per year.

22 HEARING OFFICER CUTTER: In Indiana?

23 MS. BARRABEE: Yes.

1 HEARING OFFICER CUTTER: Thank you  
2 very much for bringing that. We really do  
3 appreciate it.

4 Yes?

5  
6 DAN SEITZ, MANAGING PRINCIPAL

7 BOSE PUBLIC AFFAIRS GROUP  
8

9 I, too, have some articles that I can  
10 share with you. These are from the American  
11 College of Radiology, the American Journal of  
12 Roentgenology. I can't pronounce it. And  
13 studies that were done in Minnesota and New  
14 Hampshire, one by Towers Perrin, the other by  
15 Price Waterhouse.

16 HEARING OFFICER CUTTER: Why don't you  
17 give those to the court reporter and we can  
18 make those part of the record.

19 MR. SEITZ: Since these are my only  
20 copies, it makes it kind of difficult.

21 HEARING OFFICER CUTTER: Later. Do it  
22 later.

23 MR. SEITZ: I will get you copies.

1 HEARING OFFICER CUTTER: That was one  
2 of the things -- one of the pieces we were  
3 really missing. We just kind of wondered, you  
4 know, what that -- what those savings have  
5 been.

6 Any more comments about the language?

7 We noted the concerns to the second  
8 paragraph and ISMA will follow that up and try  
9 to get us some better information, which since  
10 we've got you guys all on e-mail blast, we'll  
11 probably just e-mail blast that out once we get  
12 that.

13 The next issue was the clarification  
14 of the categories of care when preauthorization  
15 was required. We heard a lot of anecdotal  
16 evidence about certain situations in different  
17 facilities with different providers where stat  
18 conditions, I think for the most part, were the  
19 ones that they identified, were delayed for a  
20 period of several hours or almost weren't given  
21 a preauthorization to go ahead and treat the  
22 patient in that condition for a variety of  
23 different reasons. It was tough to get a hold

1 of people, there was a lot of back and forth,  
2 time delay, that sort of the thing. So, one of  
3 our questions is; we would like for one of the  
4 providers to tell us, we've written down the  
5 words urgent, acute, stat, and emergency.

6 MS. KORTY: And elective.

7 HEARING OFFICER CUTTER: And elective.  
8 And we need for a provider to tell us in  
9 ascending order from the least dangerous to the  
10 most dangerous what those are.

11  
12 ELIZABETH EICHHORN

13 INDIANA STATE MEDICAL ASSOCIATION

14  
15 The word provider -- Elizabeth  
16 Eichhorn, Indiana State Medical -- has been  
17 used in this meeting to refer to insurers and  
18 to --

19 HEARING OFFICER CUTTER: Okay, I  
20 should say physicians. Let me say physicians.  
21 Thank you, Elizabeth. I should have made that  
22 clear.

23 So it would be helpful for us to have

1 an understanding of those categories and how  
2 they vary from one to the other in terms of  
3 severity. Because that seemed to be the  
4 problem a lot of times with the  
5 preauthorization.

6 Yes?

7  
8 ROBERT CLUTTER, MD

9 INDIANA ACADEMY OF FAMILY PHYSICIANS

10  
11 Well, stat would be the most urgent.

12 HEARING OFFICER CUTTER: That is the  
13 most urgent?

14 DR. CLUTTER: Right now. And you're  
15 not going to get preauthorization for stat.  
16 When a stat happens you do it now, worry about  
17 it later and provisions need to be made for  
18 reimbursement under those circumstances.  
19 You're not going to get precertification for a  
20 stat. You get to it first then go after that  
21 later.

22 HEARING OFFICER CUTTER: I think one  
23 of the things that came out in that discussion

1           about the stat examples that we were given, was  
2           that these people were not in the emergency  
3           room for some -- isn't that right? They were  
4           not admitted to the emergency room and that was  
5           the difficulty because in the emergency room  
6           there wasn't any need for the physician to even  
7           worry about preauthorization. But for some  
8           reason, with these two stat conditions, these  
9           people had progressively --

10           MS. KORTY: They were decompensated.

11           DR. CLUTTER: If they were admitted  
12           directly into the intensive care unit, and  
13           taken straight to the cath lab that would have  
14           been stat, and they would have bypassed the  
15           emergency room, it's still stat.

16           HEARING OFFICER CUTTER: Still no  
17           pre-op.

18           DR. CLUTTER: Yeah, I mean, do it  
19           after the fact. But I think it's still the  
20           same kind of situation when you do two  
21           procedures in the same setting. If it's  
22           something that would have been authorized, we  
23           need to go ahead and authorize it after the

1 fact.

2 Emergent is maybe not do it now, but  
3 it's got to be done perhaps in the next few  
4 hours. And in those circumstances, if you --  
5 my feeling is that should be treated just like  
6 a stat. You go ahead and do it and get the  
7 authorization after the fact.

8 But one of the recommendations from  
9 one of my constituents was that the payers,  
10 insurance companies, should have people on call  
11 all the time, just like we do, 24/7. You  
12 should be able to reach somebody and get an  
13 emergency authorization.

14 I don't know if they want to do that  
15 or not, but if they're not going to do that,  
16 then they've got to be prepared to provide  
17 authorization after the fact for emergent  
18 problems.

19 Urgent would mean it's not going to  
20 wait a month, it's not going to wait until next  
21 week --

22 HEARING OFFICER CUTTER: A day or two.

23 DR. CLUTTER: -- maybe tomorrow or the

1 next day. And maybe those things, you know,  
2 need to be precertified. There need to be some  
3 standards there as well.

4 And we need to be able to get a hold  
5 of somebody within minutes and get an  
6 authorization within 30 minutes or less, and  
7 that can be done.

8 And, of course, elective, we can do it  
9 anytime. We can take our sweet time about it,  
10 I suppose. Nevertheless, you've got to make  
11 arrangements and there's got to be some  
12 industry standards set so things are better  
13 than they are now.

14 MS. KORTY: Is there any category  
15 between urgent and elective? Something that  
16 needs to be done within the next few weeks.  
17 For example, if somebody, I don't know, maybe  
18 needing a stress test. Could that wait more  
19 than a couple of days, but it's not really  
20 elective, or is that considered elective?

21 DR. CLUTTER: A stress test would  
22 probably be urgent. If I want a stress test  
23 because the guy's got chest pain, that's

1           urgent.

2                   An elective can be -- I don't see why  
3           an elective should take more than 24 hours to  
4           get an approval. I mean, that again is one of  
5           the suggestions, which I will read to you  
6           whenever you want to hear it, that I've been  
7           given.

8                   HEARING OFFICER CUTTER: Well, why  
9           don't you read it now since we're on the topic.

10                  DR. CLUTTER: Well, okay.

11                   First of all, I am Bob Clutter, and I  
12           am here -- I've been asked to represent 2600  
13           members of the Indiana Academy of Family  
14           Physicians, and 170 members of Community  
15           Physicians of Indiana, and 8000 members of  
16           Indiana State Medical Association.

17                   So, concerned, the reason I was asked  
18           to come down here was because there was a  
19           concern that if we didn't have large volumes of  
20           irate, ensiferous doctors down here, that you  
21           might confuse the lack of large numbers of  
22           demonstrators for a lack of interest in the  
23           issue, which is not the case. This is a global

1 issue. And I would like for you to just  
2 imagine, if you will, 10,000 doctors up here  
3 standing with me yelling and screaming, tearing  
4 their hair out in frustration. That's  
5 basically the message that I was asked to  
6 convey. So you all would understand this isn't  
7 just a few disgruntled doctors who've had some  
8 bad experiences. This effects everybody. And  
9 I am not going to regale you with all the  
10 e-mails and comments I've had from different  
11 people on the issue. Suffice it to say, they  
12 are all pretty mad in feeling that the  
13 precertification process is intrusive and  
14 disruptive, time consuming, and it's expensive.  
15 We really need some relief here.

16 Most of their experiences, much like  
17 mine, I have got a part-time employee who  
18 spends about three hours a day doing these  
19 functions. So it probably costs about 50 bucks  
20 a day and over period of year that adds up.

21 The interesting thing is that nobody's  
22 complaining about patient care. I'm concerned  
23 about not being able to get things done. We

1 don't get denied. I've been in -- the whole  
2 time I've been practicing, I don't think I've  
3 ever asked for anything that was denied.  
4 Occasionally I'll have to write a letter of  
5 appeal explaining circumstances. On occasion  
6 I've talked to a medical director. But once  
7 they understand what it is we need and why we  
8 do it, it's always covered. It's always  
9 approved. And for that reason most of us  
10 perceive this to be kind of an unnecessary  
11 thing.

12 Now what you just told us about 135  
13 million dollars saved, I have no idea where  
14 that's coming from, but it's not coming out my  
15 office, that's for sure. It tends to be more  
16 of an economic issue. So that's the message  
17 that I was sent down here to convey.

18 But personally, I am speaking for  
19 myself, and I guess on behalf of everyone else,  
20 I guess you can now understand that we're not  
21 going to do away with this problem. You  
22 presented some data on cost savings for the  
23 insurance industry. It's not going to make it

1 go away. And I've talked to some people in the  
2 insurance business in terms of  
3 precertification.

4 What we need to do is streamline it so  
5 it's not so ominous, so it's not so disruptive,  
6 so we don't have to spend 50 dollars a day for  
7 a part-time employee to do it for us.

8 One of our members e-mailed me some  
9 suggestions and I'll read them to you.

10 Said, maybe we can ask them to mandate  
11 the performance standards. For example, accept  
12 electronically or via fax, the  
13 confirmation received, tracking number given to  
14 the provider within five minutes. When you  
15 send it out, it's there.

16 Decisions based on precertification  
17 authorization must be sent back electronically  
18 or via fax to the provider within 30 minutes.

19 Precert prior auth requires medical  
20 review. The provider must be notified via  
21 electronically or via fax within 30 minutes.

22 Automated phone system authorization  
23 must take less than 10 minutes to complete.

1 Live phone assistance must be  
2 available to 90 percent of calls in two  
3 minutes, and all calls within 5 minutes.

4 Precert prior auth decisions and live  
5 phone assistance must be available 24/7.

6 Stop asking us to provide further  
7 proof of authorization after the fact.

8 Medical review of precert prior auth  
9 must be completed within 48 hours.

10 Medical records documentation requires  
11 precertification and prior authorization  
12 approval where the records documentation comes  
13 from the provider, other than the one  
14 requesting the service, must be obtained by the  
15 payer. Don't place the burden of obtaining the  
16 record on the provider.

17 Obviously, much more thought would be  
18 required to develop such service performance  
19 standards. This is just gives us some examples  
20 of food for thought.

21 I thought I would just read that.  
22 Obviously, this isn't something -- we aren't  
23 going to adopt anything today. It's just to

1           throw out that I think providers are overly  
2           burdened by this. It's costly, time consuming,  
3           and we want some kind of relief. If we could  
4           just get some standardization and cooperation  
5           from the payers, so that the process would be  
6           smoother, so we didn't have to take so much  
7           time, that's what we're looking for.

8                   I think probably what you're going to  
9           need to do is form a committee and you will  
10          have to have people from the insurance industry  
11          and providers get together and decide what's  
12          reasonable and what is not reasonable.

13                   I would hope it would be a cooperative  
14          thing. I hope it wouldn't be the insurance  
15          people sitting there trying to preserve every  
16          little clause they've got and providers going  
17          in there and trying to take back everything  
18          they can. I would hope it would be a  
19          cooperative spirit.

20                   If the people participating understood  
21          maybe prior auth presert is a necessary thing,  
22          but let's just restrict it to the things that  
23          need to be preauthorized. And let's develop a

1 system that can be acceptable, something we can  
2 live with.

3 If there's any kind of  
4 standardization, that would be helpful.  
5 Because right now we have all these different  
6 companies, they all have different  
7 requirements, they change every quarter. We  
8 don't know who requires what and my gal just  
9 preauthorizes everything because she doesn't  
10 know what needs to be preauthorized and what  
11 doesn't. If we had some kind of  
12 standardization that would be helpful. I guess  
13 that's all I have to say.

14 MS. KORTY: Can I ask one quick  
15 follow-up, Doctor?

16 DR. CLUTTER: Yes.

17 MS. KORTY: You said you spend about  
18 50 dollars per day on this. How many patients  
19 do you see in a typical day?

20 DR. CLUTTER: I see, well, we're a  
21 group of five, and we probably see a hundred  
22 patients a day.

23 MS. KORTY: So that's about 2 dollars

1 per patient?

2 DR. CLUTTER: No. About 50 cents per  
3 patient.

4 MS. KORTY: See, that's why I'm a  
5 lawyer. Math is not my thing.

6 DR. CLUTTER: Based on the time it  
7 takes for that employer, salary, benefits, and  
8 so forth, that's about what it costs us. About  
9 50 cents a patient, and I think that's a lot.

10 HEARING OFFICER CUTTER: I don't know  
11 if you got to hear some of the other comments  
12 from the other two meetings, but one of the  
13 things, that, unfortunately is a reality in the  
14 marketplace is, and it kind of goes to some of  
15 the concerns that your group has. There are  
16 multiple companies doing business, and within  
17 those multiple companies they may have 10 or 15  
18 different kinds of health insurance plans.

19 So each of those plans is a variance.  
20 They may have some consistency of  
21 preauthorization through those plans, that  
22 would seem reasonable and probably is so.

23 But the other piece is, is so much of

1 the population in the state of Indiana that has  
2 health insurance are under what is called ERISA  
3 plans, which are employer sponsored funded  
4 plans, not a plan with an actual insurance  
5 company. Those plans -- we have no authority  
6 over those plans. And about 71 percent of the  
7 folks in Indiana that have health insurance are  
8 covered by one of those plans.

9 Specifically, you'll see a large  
10 employer like one of the universities, a state  
11 employee, somebody who works for General  
12 Motors, Ford Company, any of those kinds of  
13 larger entities.

14 But even employers as small as 75 or  
15 even 50 people can have what is called an  
16 employer's self-funded plan. And those plans,  
17 no matter what we do with this information,  
18 they don't have to pay any attention to us,  
19 because they're regulated by the federal  
20 government not any state government.

21 I think that's a lot of the issue that  
22 you guys are faced with. I would be willing to  
23 bet that probably 80 percent of the patients

1           you see are covered under those self-insured  
2           plans. And we have an opportunity to say to  
3           them, well, you know, let's try to have some  
4           kind of consistency in standardization. I know  
5           that's frustrating because when we go through  
6           an exercise like this, ultimately we're  
7           probably only going to help maybe 20 to 25  
8           percent of the folks in Indiana that have  
9           health insurance, just because of that fact.

10           DR. CLUTTER: When you say you have no  
11           jurisdiction, do you mean the Department of  
12           Insurance has no regulatory authority, or are  
13           you saying the State of Indiana has no  
14           legislative authority?

15           HEARING OFFICER CUTTER: Both.

16           DR. CLUTTER: So you couldn't go to  
17           the legislature and pass a law and say, hey, we  
18           want these standards applied to these ERISA  
19           plans?

20           HEARING OFFICER CUTTER: No. Federal  
21           law always trumps state law.

22           DR. CLUTTER: So you're telling me 80  
23           percent of the people insured -- this whole

1 exercise is only for the 20 percent?

2 HEARING OFFICER CUTTER: Right, that  
3 is the sad truth.

4 DR. CLUTTER: I am sure glad I took  
5 the day off to come down here.

6 HEARING OFFICER CUTTER: Well, and the  
7 other thing that we have talked about, that you  
8 wouldn't know about was because of that issue,  
9 we've discussed having some kind of an  
10 indication on the patient ID card for their  
11 health insurance, that would let you know  
12 that.

13 We think that would be helpful for you  
14 and the patients, because then you're going to  
15 know that, that health plan that they're  
16 covered under was constructed by the employer,  
17 not by an insurance company. Even though an  
18 insurance company may be processing the claims  
19 for that employer and just charging a fee to  
20 process those claims so that employer doesn't  
21 have to hire somebody to do it.

22 DR. CLUTTER: Will these ERISA plans  
23 you're talking about hire Anthem or somebody --

1 HEARING OFFICER CUTTER: Yes. Yes.

2 Yes.

3 MS. KORTY: To administer it.

4 DR. CLUTTER: To administer it. And  
5 so your telling me that Anthem and Aetna then  
6 are immune from anything that you might --

7 HEARING OFFICER CUTTER: For that  
8 claim.

9 DR. CLUTTER: For that claim. Well,  
10 you know in the spirit of cooperation you think  
11 the insurance companies might be inclined to  
12 apply the same kind of standard across the  
13 board for those? Or not?

14 MS. KORTY: It's not their call. It's  
15 not their decision.

16  
17 DAN SEITZ, MANAGING PRINCIPAL

18 BOSE PUBLIC AFFAIRS GROUP

19  
20 Doctor, the people that have to  
21 cooperate in those plans are the employers.  
22 It's not an issue of what Aetna and Anthem may  
23 or may not do. We are not the ones that

1 control that situation, we simply administer  
2 it, and that is part of the difficulty.

3 Many of these things that you would  
4 like to see happen have to happen at the  
5 federal level, under federal law, which would,  
6 frankly, make a lot more sense than going from  
7 state to state to state and having varying sets  
8 of rules and requirements in each state. But  
9 at least at the federal level, so far, we've  
10 been just in a deadlock in terms of  
11 performing. That may change with the elections  
12 next year. Who knows.

13 But in the end a lot of the problems  
14 that are constantly identified by physicians  
15 and other health care providers relate to the  
16 fact that we have a system that does not have a  
17 single pair. And if you want a single pair  
18 system, that will solve a lot of problems.

19 DR. CLUTTER: You know what, I think  
20 I'm about ready.

21 MR. SEITZ: It will solve some  
22 problems and it'll produce a lot of new ones.

23 DR. CLUTTER: Then we could probably

1 deal with this. As it is we can't even deal  
2 with it.

3 MR. SEITZ: That is the problem.

4  
5 ELIZABETH EICHHORN

6 INDIANA STATE MEDICAL ASSOCIATION

7  
8 Elizabeth Eichhorn, Indiana State  
9 Medical. Something I would like to say about  
10 the point that we have been discussing, when we  
11 talk about any type of state law or information  
12 for insurance plans, about the percentage of  
13 plans. I guess when we make a state law if you  
14 apply that philosophy that, okay this only  
15 affects 20 percent of the population, well,  
16 then we should pass no state laws, because  
17 there is no state law or rule that effects 100  
18 percent of the population. Should we not have  
19 passed the uninsured law, the uninsured plan,  
20 the Governors plan, because that only can  
21 insure a percentage of the population? Should  
22 we have not passed the booster seat law because  
23 that effects only children under a certain age?

1 So it doesn't effect the whole population.

2 I wish emphasis -- so much emphasis  
3 was not placed on the fact that, okay, it's  
4 only 20 percent of the insured population that  
5 will have remedy or relief. You have to have  
6 state laws. Those 20 percent do matter. And  
7 we get lots of calls and complaints about the  
8 issues we bring to you to try to remedy.  
9 Otherwise, we would not bring them.

10 MS. KORTY: Elizabeth, I understand  
11 your comments, but I think the point on this  
12 particular part is 20 percent standardization  
13 is no standardization at all. You're still  
14 going to have, okay, all of the insured plans  
15 you only have to preauthorize these particular  
16 procedures, but the other 80 percent can do  
17 whatever they want and so the practitioner, who  
18 is being cautious, is going to call on  
19 everything, just like you're doing.

20 MS. EICHHORN: And I am not being  
21 controversial, but even just proposing to the  
22 Department today, that will bring relief to  
23 some of our members. And to those members, to

1           those patients, that matters. So I just wish  
2           so much focus would not go on this 20 percent  
3           or 30 percent number.

4           HEARING OFFICER CUTTER: We're not  
5           discounting that, it's just that we want the  
6           folks who suffer through those processes to  
7           understand why, even if we go through this, it  
8           probably isn't going to change their world.

9           DR. CLUTTER: Well, some of the things  
10          that are process things, so, even though it's  
11          an ERISA plan, if it's a precertification  
12          process, and if Aetna and Anthem is doing that,  
13          then Anthem can still comply with those  
14          standards.

15          I am talking about, you know, getting  
16          them done electronically or by fax and getting  
17          answers back within a reasonable time period.

18          HEARING OFFICER CUTTER: Right.  
19          Right. Right.

20          DR. CLUTTER: Those kinds of standards  
21          would still apply.

22          HEARING OFFICER CUTTER: And to that  
23          point that takes us to the third item under our

1 first hour is an appropriate time line for each  
2 category of care. That's one thing that the  
3 three of us have discussed in depth is, we  
4 think it's important to recognize the different  
5 levels in terms of preauthorization because of  
6 the restrictions that we've heard practitioners  
7 tell us they were under because they couldn't  
8 perform what they needed to perform, when they  
9 maybe needed to perform it. I think that's a  
10 very reasonable request.

11 So we were thinking in terms of -- and  
12 that's why I asked you to identify those four  
13 levels for us, so we could say, okay for  
14 electives, let's say you have to have a  
15 preauthorization done in five business days,  
16 something like that.

17 DR. CLUTTER: How about 24 hours?

18 HEARING OFFICER CUTTER: You don't  
19 need that for an elective surgery. You don't  
20 schedule those for three weeks anyway.

21 DR. CLUTTER: Not necessarily.  
22  
23

DAMIR MATESIC, MD

ACADEMY ALLERGY ASTHMA & SINUS

Excuse me. Dr. Matesic.

I would like to say something about that because these things change. If you see something acute today, it can be urgent in two hours. Things can change so quickly. So to really be fixed with these terms is ridiculous. It just cannot be used, except for stat. And acute means only new and it cannot be used here either. Things change quickly.

HEARING OFFICER CUTTER: I don't understand. So you don't see any value at all in establishing some kind of, like for a stat condition, there wouldn't have to be preauthorization. For an emergent condition they would have to do it within like a two-hour period, or a three-hour period. And then on an urgent condition, can be done within 24 hours.

DR. CLUTTER: I would say both stat and emergent should be after the fact. Because emergent, that can be done within an hour or

1 two. They're going to do it when they're going  
2 to do it. It's not going to bypass the ER and  
3 go to the cath lab necessarily. They're going  
4 to go ahead and get it done as soon as they can  
5 and any authorization is not going to be the  
6 first thing they think of.

7 HEARING OFFICER CUTTER: You're going  
8 to do those after the fact, then?

9 DR. CLUTTER: Yes.

10 Urgent, I would say urgent should  
11 probably be within 24 hours. I think within an  
12 hour. But I don't know why that can't be  
13 done. They should have people on call that  
14 should make those decisions, just like we do.

15 MS. KORTY: I think we cut you off,  
16 before you continue to talk could you state  
17 your name for the record.

18 DR. MATESIC: If you have somebody on  
19 the phone and you can actually deal with them,  
20 because of change, to deal with, that would  
21 make sense.

22 HEARING OFFICER CUTTER: Can we have  
23 your name please for the court reporter.

1 DR. MATESIC: Damir Matesic. I'll  
2 give you one of my cards. D-A-M-I-R  
3 M-A-T-E-S-I-C.

4 HEARING OFFICER CUTTER: Okay, Dan.

5  
6 DAN SEITZ, MANAGING PRINCIPAL

7 BOSE PUBLIC AFFAIRS GROUP  
8

9 You know, we have a statute on the  
10 books. I don't know if you've read it, but it  
11 controls time frames, emergencies, it's already  
12 there for your utilization and review. Now, if  
13 you want to talk about tweaking these, fine.  
14 And, you know, getting the term in here as  
15 emergent, urgent, I don't know how all that  
16 fits. But when we wrote the statute, emergency  
17 seemed to be the category that was acceptable  
18 to everyone. And we provide that for a period  
19 of at least 48 hours following an emergency  
20 admission, service or procedure, during which  
21 an enrollee, or the representative of the  
22 enrollee may notify the utilization review  
23 agent, in this case the preauthorization agent,

1 if you will, and request certification, or  
2 continuing treatment for the condition.

3 DR. CLUTTER: So it already says if  
4 it's an emergency, which would include your  
5 stat, then it would be authorized after the  
6 fact.

7 MR. SEITZ: Exactly. And there are  
8 provisions regarding telephone service,  
9 availability, all of that is in current law.

10 DR. CLUTTER: If that's in there,  
11 that's got be proved, because I've got people  
12 who sit on hold for 40 minutes.

13 MR. SEITZ: Unfortunately, it doesn't  
14 talk about how long you're on hold. I will  
15 concede that.

16 DR. CLUTTER: Well, maybe you should  
17 write that in there.

18 HEARING OFFICER CUTTER: And that says  
19 emergency admission, does it not? The statute?

20 MR. SEITZ: It's emergency admission,  
21 service or procedure.

22 HEARING OFFICER CUTTER: Emergency  
23 only, so if it doesn't come in through the ER

--

MR. SEITZ: Well, that's not necessarily ER.

HEARING OFFICER CUTTER: Okay. Well, that's why I'm asking.

MR. SEITZ: It's emergency admission. That could be, as he said, I think he said there were some cases where you have direct admission for cardio and some other procedures. You wouldn't necessarily go through the ER.

DR. CLUTTER: I mean, if I've got a patient in my office that's got pneumonia and respiratory insufficiency, I know he needs to be admitted but not as urgent or stat or emergent, but he needs to be in the hospital and put on oxygen, IV, and antibiotics. I need to make arrangements to get him directly admitted, that would still qualify as an emergency, even though he's not emergent.

MR. SEITZ: I believe so.

HEARING OFFICER CUTTER: The questions -- the other set of questions that we had, we've had a little bit of conversation about

1           who determines -- I think the scans were the  
2           area that seemed to have the most potential for  
3           abuse or that is where the industry felt like  
4           there was the most opportunity for review that  
5           they suffered abuse in that category more than  
6           anything else. So from one of the insurers or  
7           one of the HMOs, can you give us an idea of  
8           what that process is to establish --

9                     I mean, in my brain, if you say I'm  
10           going to call in and preauthorize something, I  
11           visualize a line of people sitting at a call  
12           bank kind of process and they've got this  
13           binder in front of them and somebody calls in  
14           and says I've got a patient with so and so and  
15           they go alphabetically, whatever that page is  
16           and they look that up and they say yes or no,  
17           or whatever the circumstances are. I need to  
18           know if that's a correct assumption.

19  
20                     MARCIE HART, MANAGER OF OPERATIONS

21                     ARNETT HEALTH PLANS

22  
23                     Marcie from Arnett.

1                   In the HMO world there is no call in  
2                   and give removal, it's submit the documentation  
3                   and send something in writing back. We are  
4                   held to specific standards for any situation  
5                   which requires that. So in that case, in  
6                   Arnett's instance, we only have a couple that  
7                   need to be approved. The documentation would  
8                   be submitted in writing and it would be  
9                   reviewed by a lay person, not necessarily a  
10                  nurse, who falls outside of the algorithm. The  
11                  medical director would look at it, and only the  
12                  medical director could deny that.

13                 DR. CLUTTER: How is the data  
14                 submitted, if not by phone? By fax?

15                 MS. HART: Via fax or if you're a  
16                 contractor providing you have on-line access so  
17                 that you can submit electronically.

18                 DR. CLUTTER: How long does it usually  
19                 take to have that process to turn around and  
20                 get an answer?

21                 MS. HART: Our turn around time is  
22                 between 24 and 48, although standard is 15 days  
23                 for an elective, and 5 days -- I want to say --

1           for nonelective.

2                   HEARING OFFICER CUTTER:  Marcie, on  
3           the categories we were talking about earlier,  
4           when you say nonelective, does that ignore  
5           these urgent conditions, these stat conditions?

6                   MS. HART:  Urgent and emergent would  
7           be retrospectively, always.  We don't think of  
8           it -- it's causing us more work to do it  
9           prospectively because we know it's going to be  
10          approved.  We're going to tie up our phone  
11          lines, we're going to get our call reps and  
12          we're going to be transferring you around.  
13          Most likely you're not going to find out right  
14          then and there.

15                  DR. CLUTTER:  Do you ever get into an  
16          argument where the provider decided it was  
17          emergent, he went ahead and did it, and then  
18          you decide that this wasn't really an emergency  
19          and it could have been done electively.

20                  MS. HART:  No.  Typically we don't  
21          look at that retrospectively.  We don't have an  
22          authorization processor or an audit processor  
23          for all of the health plans, but --

LINDA BARRABEE, REG VP NETWORK

ANTHEM BLUE CROSS AND BLUE SHIELD

We wouldn't deny it. If it was medically necessary we would still approve it. If we saw a trend we might go out of office to but it want be condition if it was necessary if it would have been approved.

HEARING OFFICER CUTTER: So Anthem follows kind of the same description as what Marcie described that Arnett does?

MS. BARRABEE: Yes. I wanted to address the electronic topic. We take calls at Anthem via the phone, but that's not our preference. We prefer on-line. We have fax, but again, we prefer on-line.

But I will tell you for a number of years for a precert we have been trying to move this process on-line where we meet resistance and reluctance after we to get that moved on-line. We try to educate them, you don't have to sit on the phone, go on-line. You can

1 do it 24 hours a day unless they bring  
2 information.

3 I'll be honest, one of the standard  
4 lines I get when meeting with the physician is,  
5 I'm the only one that has Internet access in my  
6 office. They're afraid of their staff --  
7 they're going to go shopping on-line and not do  
8 their work. And I can understand that. And I  
9 understand that's an issue. But we are  
10 offering that alternative. It's very  
11 resistant. It's very resistant.

12 HEARING OFFICER CUTTER: What about  
13 the fax process? Do you get much volume?

14 MS. BARRABEE: We get a lot by fax.  
15 But again, it's paper. So we're getting --  
16 when that fax machine is going constantly  
17 you're getting hundreds, reams of faxes in  
18 every day. In radiology presert, it's a fine  
19 example, on a lot of those you can get our  
20 approval back immediately. You don't have to  
21 wait for someone to come back with it. And we  
22 still have a hard time getting people to use  
23 it, which is very disappointing.

1 MS. KORTY: So do you have  
2 significantly faster response time if someone  
3 submits electronically than if they submit via  
4 fax? And is fax faster than phone?

5 MS. BARRABEE: Yes. And it's  
6 cheaper. We do not want to have call centers  
7 with people sitting there, people sitting on  
8 hold for 40 minutes because then another phone  
9 is going to ring while they were on hold. Does  
10 it happen? Sure. When you've got a large  
11 volume, probably in the beginning of the year  
12 when you have the most new members that is when  
13 it picks up the most. But we really want it to  
14 go on-line. We are meeting with a lot of  
15 reluctance.

16 HEARING OFFICER CUTTER: Do you have  
17 any sense of, on a percentage basis between the  
18 on-line, the fax, and the phone, which one of  
19 those three methods you get the preponderance  
20 of your requests?

21 MS. BARRABEE: The phone.

22 HEARING OFFICER CUTTER: The phone  
23 still?

1 MS. BARRABEE: When I polled from a  
2 recent provider visit, it was a large provider  
3 group explaining about -- and this was specific  
4 to radiology. When I explained it to the  
5 entire group he said, how many are coming in  
6 via radiology? How many are coming in via  
7 phone, fax, and the web. It was like 5 percent  
8 on the web and about 10 percent fax. The rest  
9 were coming in on phone. The one provider  
10 that, that division representing the group, 100  
11 percent of that physician's group were coming  
12 in via the phone. We'd really like to move it  
13 there.

14 DR. CLUTTER: Can I ask how many  
15 companies have that capability?

16 MR. SEITZ: All of them.

17 HEARING OFFICER CUTTER: Everybody.

18 DR. CLUTTER: Everybody? So we can do  
19 precertification work by electronically with  
20 everybody or by fax?

21 MR. SEITZ: Yes.

22 DR. MATESIC: May I respond quickly?  
23 (Speaking to Mr. Seitz at side of room.)

1 MR. SEITZ: I am sure it varies. But  
2 you're going to get a much quicker response. I  
3 would have to ask.

4 MS. BARRABEE: It really depends on  
5 the procedure. If the algorithms are built  
6 into the system and a request goes in and it  
7 goes against it, you might get it back right  
8 away. If it needs to be checked and someone  
9 has to look at some other algorithms, then it  
10 might be a few hours, it might be the next  
11 day.

12 HEARING OFFICER CUTTER: Now, going  
13 back to some of the comments that were made  
14 earlier then for the stat and the emergent  
15 circumstances, for the most part those are  
16 after the fact anyway, right?

17 MS. BARRABEE: Correct.

18 HEARING OFFICER CUTTER: The time is  
19 not as critical on those as it would be maybe  
20 for something else that were coming in?

21 MS. HART: Although we'd like it in  
22 before the claim comes in, or the member calls  
23 on it.

1 HEARING OFFICER CUTTER: Yeah. Okay.

2 So that helps us through, in terms of  
3 eliminating any concerns about those kinds of  
4 stat conditions, that was something that we had  
5 a sense of it was a big deal. And it sounds  
6 like at least from the division's prospective,  
7 you guys, you don't even go there until after  
8 the procedure is done. That is helpful to  
9 know.

10 You talked a little bit about the  
11 medical directors are the ones that create the  
12 list of the algorithms or whatever those forms  
13 are.

14 MS. HART: I wouldn't say the medical  
15 directors. There is a committee that does  
16 that, and typically they go by Millerman  
17 Roberts.

18 HEARING OFFICER CUTTER: Oh, do they?  
19 So they use an actuary?

20 MS. BARRABEE: We use a lot of input  
21 from the different societies.

22 HEARING OFFICER CUTTER: But then the  
23 folks -- since you still have such a volume of

1 phone calls, there's still the call center,  
2 they're sitting there probably looking at a  
3 screen of some sort where they're going to key  
4 in whatever information they are given to see  
5 what that pulls up.

6 MS. HART: Correct.

7 HEARING OFFICER CUTTER: Do they have  
8 any other -- do they have any other  
9 opportunity, as they are going through that,  
10 you know looking at the screen to see what  
11 those algorithms are. Do they have any other  
12 opportunity to step outside of the those  
13 parameters, or is there somebody that they can  
14 communicate with right away?

15 MS. BARRABEE: When it comes into  
16 Anthem, the first level is not a nurse. And it  
17 typically is going right by what is on that  
18 computer screen. If approved, it goes on. It  
19 can't be denied. The only time -- if it's  
20 medical necessity or it's outside the norm, it  
21 goes to the next level, which is a nurse.  
22 Nothing will be denied unless the medical  
23 director reviews it.

1 HEARING OFFICER CUTTER: Even the  
2 nurse can't deny it?

3 MS. BARRABEE: Not for medical  
4 necessity.

5 HEARING OFFICER CUTTER: We need to  
6 probably clarify that. Have you guys as  
7 carriers had many circumstances, or even, maybe  
8 I should ask the physicians as to where you had  
9 -- you said you've not ever had a denial  
10 because you preauthorize everything. But  
11 you've never had a situation of urgent or  
12 emergent stat condition where they were denied?

13 DR. CLUTTER: I haven't, no.

14 HEARING OFFICER CUTTER: Anybody else?  
15 Yes?

16  
17 SEAN DUDDY, DIRECTOR MANAGED CARE

18 ST. FRANCIS HOSPITAL

19  
20 Carol, this is Sean Duddy, I'm from  
21 St. Francis Hospital. I think one of the  
22 things we are missing regarding precert  
23 on-line, not every carrier does that. I wanted

1 to mention that first off. That's got to be  
2 corrected. I know a major carrier in this  
3 market is just now promising that that will be  
4 available for providers to do that on-line.  
5 And then even within the Blue Cross family, we  
6 may have an Anthem card come in through the  
7 hospital but that is not going through Anthem's  
8 system, they can go through the Blue Cross of  
9 Illinois, for example, which has a different  
10 process and we may have some other difficulties  
11 there.

12 MS. BARRABEE: That goes to that ASO  
13 which is a --

14 HEARING OFFICER CUTTER: That's a  
15 self-funded plan.

16 MR. DUDDY: The statement -- I don't  
17 want everybody to think that every insured that  
18 comes into the provider's office has the  
19 capability to have their stuff precerted  
20 through the Internet. There is still some  
21 confusion as far as who does have the  
22 capability to do it. There's even some  
23 headaches trying to set up everybody. We've

1 got turn over. We have certain things that you  
2 think you can get set up and do it for a  
3 doctor's office real quick and find that it  
4 takes a few weeks, a month to get your password  
5 and your log in and all that, but it's  
6 available.

7 I try to push it to our doctors at the  
8 hospital, you need to go out and use it. I  
9 just want to make sure that it has not left the  
10 impression that it's available for every  
11 insured that comes into the office.

12 HEARING OFFICER CUTTER: That is true,  
13 like she said, it could be depending upon the  
14 -- who the self-funded plan is with. I think  
15 there is probably a greater number of carriers  
16 who have the capacity, rather than don't.

17 MR. DUDDY: Within the last, I'd say  
18 two years really, that's kind of rolled out and  
19 has been more available. I have been to some  
20 doctor's offices that are in rural settings,  
21 and you can make jokes about how they aren't  
22 with the 20th Century let alone the 21st. You  
23 might find, I'll get on the computer with the

1 doctors and find they have the old AOL and it  
2 took five minutes before the page is up. So to  
3 ask them to go the Internet and do something,  
4 they kind of go, are you kidding? There's no  
5 way.

6 So, there's some catching up to do.  
7 But that system is still, I think -- radiology,  
8 what, March of '05, is that when that rolled  
9 out? It's still relatively new even a few  
10 years later, as far as educating them and  
11 letting them know they need to do that.

12 MS. BARRABEE: Correct. Right.  
13 Couple of things, first, I agree some rural  
14 areas might be difficult, but I'm talking  
15 Indianapolis. There's a lot of providers here  
16 that won't give their office access either.  
17 Yes, there are issues in rural, and that is  
18 something to work with.

19 Secondly, on the savings. I don't  
20 want to you to refer to it as savings, because  
21 being politically correct, we don't have any.  
22 Sentinal effect is more (inaudible). If you  
23 took it away your cost could increase that

1 much.

2 HEARING OFFICER CUTTER: I think we  
3 had comments of that effect in that first  
4 meeting.

5 MS. BARRABEE: Correct. It's the  
6 sentinal effect.

7 HEARING OFFICER CUTTER: A couple of  
8 carriers had experienced that. They did  
9 eliminate the preauthorization and all of a  
10 sudden, bloop.

11 DR. CLUTTER: That's probably why we  
12 are not going to be successful in getting rid  
13 of it. It would just make it easier.

14 HEARING OFFICER CUTTER: The last  
15 point of interest -- go ahead, Doctor.

16 DR. CLUTTER: One concern I would  
17 express, occasionally something happens. You  
18 order a test, you do something, just didn't  
19 think about it, or didn't get preauthorized, so  
20 it was denied because it wasn't prior  
21 approved, and it was legitimate. It would have  
22 been approved. But they don't pay you because  
23 you didn't go through the hoops and hurdles.

1           How often does that happen? How do insurance  
2           companies manage that situation?

3                   Let's say I order a test or a big  
4           procedure, something that would have been  
5           approved but I didn't do it. Sorry. And I  
6           send the bill and it comes back with no prior  
7           authorization, we're not going to pay it. How  
8           often does that happen? Or, I guess, then can  
9           you appeal it after the fact and get it  
10          reversed, get paid? Or is this just gottcha?

11                   MS. BARRABEE: Unfortunately, I have  
12          to say it depends on the member's benefit plan.  
13          You could do it after the fact, there may be a  
14          penalty because it wasn't precerted ahead of  
15          time. Initially, when the claim comes in on  
16          the system it will deny it as not prior  
17          authorized.

18                   DR. CLUTTER: And then I presume  
19          people would then feel it because they said,  
20          well, gee, I'm sorry I forgot to do it, but  
21          it's clearly indicated, can you pay me? What  
22          happens? Do they get paid? Or are they going  
23          to get paid, typically?

1 MS. BARRABEE: Typically, on a PL if  
2 there's no precert penalty for not having it  
3 done, that is something that's a group issue.  
4 If it's a medical necessity, we are going to  
5 approve it. If you would have called ahead of  
6 time we would approve it. We would pay it.

7 MS. HART: I can tell you at Arnett,  
8 if it is not precertified, it will be denied.  
9 It is the physician's responsibility.  
10 Nonetheless, for an appeal, however, if your  
11 response is, I forgot, it is going to be  
12 denied. If it was an urgent issue and that is  
13 why I did not get the precertification, then it  
14 will be approved. A lot of it is because of  
15 facility finance because you want to be tight-  
16 reined for that authorization process.

17 MS. BARRABEE: Do let me clarify. As  
18 long as you're a network provider, if you send  
19 that patient to a non network provider, it's  
20 not likely going to get authorized, unless it's  
21 an emergency issue.

22 DR. CLUTTER: That wouldn't have been  
23 approved anyway. You're talking about the ones

1           that would have been approved --

2           MS. BARRABEE:   Correct.

3           DR. CLUTTER:   -- you have the ability  
4           to not pay it, so you don't.

5           HEARING OFFICER CUTTER:   Anybody else  
6           want to weigh in on that topic?

7           Any other just general comments,  
8           concerns, anything that you guys think we  
9           really missed the mark on, or that you really  
10          thought we were going to talk about and we  
11          haven't talked about?

12          I know the bill contained two or three  
13          other things, but I think we've already  
14          determined over the first couple of meetings  
15          that those were things we probably wouldn't  
16          have any opportunity to really try, for a  
17          variety of reasons.  So that is why we kind of  
18          pulled back to the preauthorization.  That was  
19          the main focus of bill anyway.

20          This is just me, I'm still stuck on  
21          that logo on the ID card that will let me know  
22          if they're self-funded or fully insured, and  
23          we've heard from the industry that there is not

1 a huge objection to that.

2 So, anybody else have any comments  
3 about that?

4 MR. DUDDY: My clients will keep  
5 bothering you about the ERISA plans.

6 HEARING OFFICER CUTTER: Well, you  
7 know, as a former agent, this is a very self-  
8 serving thought for me, and let me tell you  
9 why, because for me to get beaten up over an  
10 insurer issue that's not an insurer issue, I  
11 would rather be able to beat up the employer  
12 and say this is his call. This wasn't the  
13 insurance company. And I would think the  
14 industry, the insurers at least, would prefer  
15 that, to have the patient know that it was an  
16 employer benefit design and a call rather than,  
17 you know, the evil insurance company making  
18 that call.

19 MS. KORTY: I can see it being a  
20 benefit to the providers too, because then you  
21 can tell your patient, you need to talk to your  
22 employer. They're the ones who are denying  
23 this, just go talk to your human resources.

1 HEARING OFFICER CUTTER: Well, unless  
2 anybody has anything else?

3 I have no idea what time it is.

4 MR. SEITZ: It's 2:20.

5 HEARING OFFICER CUTTER: Is it. Okay.  
6 I don't suppose anybody minds getting out a  
7 little bit early today. We ran right through  
8 three o'clock the other two meetings.

9 Again, it's been very, very helpful  
10 for us, all of you from all the different  
11 comments, and all the different explanations,  
12 concerns and issues that you've raised, it's  
13 been very, very helpful. Thank you so much.

14 DR. CLUTTER: We're all done with the  
15 meeting, right?

16 HEARING OFFICER CUTTER: We are. And  
17 we'll have -- the ISMA will have some  
18 information that we'll e-mail out to  
19 everybody, and take comments on some of the  
20 language that we discussed today as well.  
21 Thank you.

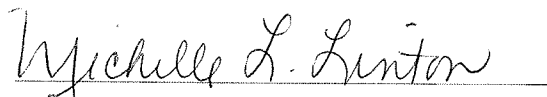

22  
23 (Hearing ended at 2:25 p.m. on September 19, 2007.)

STATE OF INDIANA       )  
                                  )   SS:  
COUNTY OF JOHNSON    )

I, Michelle L. Linton, Notary Public  
and Shorthand Reporter in and for the County  
of Johnson, State of Indiana, do hereby  
certify that the foregoing hearing was taken  
on behalf of the Department of Insurance, in  
the matter of SB 372, beginning at  
1:00 p.m. on the 19th day of September, 2007;

That said hearing was taken down in  
stenograph notes and afterwards reduced to  
typewriting under my direction and that the  
typewritten transcript is a true record, to  
the best of my knowledge and belief;

IN WITNESS WHEREOF, I have hereunto  
set my hand and affixed my notarial seal this  
12th day of October, 2007.

Michelle L. Linton

Notary Public

Residing in Johnson County

My Commission Expires:

December 15, 2013

I agree that it's not what I had hoped to find. But it is the only concrete thing I've been able to turn up. The way we try to explain these things to the policymakers is that the financial costs of health care are just like any other issue running over budget - you have to look for small ways to cut costs to eventually make big changes in your budget. 4% may sound small but the result of not allowing us to do it is that premiums will rise by 4% - probably not the result anyone is looking for.

**Thanks Shannon. This is good although somewhat dated. If the testimony of the industry is true, i.e., it is using UR much more sparingly than has been the case in the past, it would suggest that this number may actually be somewhat less than 4%. Further, the way that our policymakers will look at this is that 4% is only \$40 per \$1000 of premium and that the administrative burden on the system far outweighs the savings. Dan**

Subject: Re: Request

A colleague of mine shared the following:

#### Minnesota

The Minnesota Council of Health Plans and the Chamber of Commerce requested Towers Perrin to analyze the impact that various managed care oversight proposals would have on the cost and quality of health care. The "Analysis of Health Care Mandates and Controls" (March 1999) concluded that these provisions would significantly raise an HMO member's annual premium.

The proposals that were analyzed include:

- \* Any willing provider legislation (10.5% - 14%);
- \* Mandated coverage for alternative providers and treatments (6% - 7%);
- \* Elimination of utilization review (4%); and
- \* Mandated coverage of experimental treatments (2.5%).

#### New Hampshire

The New Hampshire Business and Industry Association engaged the firm of PriceWaterhouseCoopers to analyze the cost impact of draft legislation to regulate managed care plans. The "Review of the State's Proposed Draft HMO Accountability Act" (April 1999) estimated that its provisions would raise plan premiums by a total of 2.1% to 5.4%.

The specific provisions of the bill that were reviewed would:

- \* Define UR as the practice of medicine and hold a plan's medical director responsible to this standard when UR decisions are made (2% - 5%); and
- \* Create an external review process to resolve enrollee grievances (.1% - .4%).

## Preauthorization of CT and MRI Examinations: Assessment of a Managed Care Preauthorization Program Based on the ACR Appropriateness Criteria® and the Royal College of Radiology Guidelines

Arya Blacher, MD<sup>a</sup>, Sigal Tai, MD<sup>a</sup>, Anat Mandel, Ilva Novikov, PhD<sup>a</sup>, Gabriel Polliack, MD<sup>a</sup>, Jacob Sosna, MD<sup>b</sup>, Yehuda Freedman, MD<sup>a</sup>, Lauriah Copel, MD<sup>a</sup>, Joshua Shemer, MD, MBA<sup>a</sup>

### Purpose

To evaluate computed tomography (CT) and magnetic resonance imaging (MRI) utilization patterns before and after the implementation of a preauthorization program based on the ACR Appropriateness Criteria® and the guidelines of the Royal College of Radiologists.

### Materials and Methods

All CT and MRI requests received at the preauthorization center and CT and MRI examinations actually performed were identified by our health care service's centralized computerized database between January 1, 2000, and December 31, 2003. The obligatory preauthorization of CT and MRI requests was established for CT in September 2001 and for MRI in February 2002. All ambulatory CT and MRI examination requests sent for approval during the study period by most of our health care physicians were included in the study. The preauthorization program model is presented, and multiple parameters were evaluated from January 2000 to December 2003, before and after preauthorization was established.

### Results

Before preauthorization was required, the CT and MRI utilization rates were constantly increasing by 20% and 5% per year for CT and MRI, respectively. After preauthorization was implemented, CT and MRI annual performance rates decreased from 25.9 and 7 examinations per 1,000, respectively, in 2000 to 17.3 and 5.6 examinations per 1,000, respectively, in 2003. The decreases in the utilization of MRI and CT imaging between 2001 and 2003 were 9% (12,129 compared with 11,070 MRI examinations) and 33% (81,223 compared with 57,204 CT examinations), respectively, resulting in substantial, statistically significant cost savings. The deferral rate ranged from 7.5% to 12.2% (mean = 9.8%) for CT and 13.9% to 21.4% (mean = 17%) for MRI. Deferred cases in CT were most commonly in neuroradiology, musculoskeletal radiology, and CT angiography (ranges of deferred cases 9% to 12%, 11% to 12%, and 10% to 12%, respectively). Deferred cases in MRI were most commonly in abdominal and chest radiology (ranges of deferred cases 32% to 37% and 20% to 31%, respectively). Computed tomography was more commonly utilized inappropriately by pediatric professions, and MRI was more commonly utilized inappropriately by medical subspecialty professions.

### Conclusion

Preauthorization of CT and MRI requests results in a substantial decrease in utilization of these modalities with reduction in imaging costs.

# AGENDA

## INTERIM STUDY COMMITTEE FOR S.E.A. 372

September 19, 2007

**1:00-3:00 PM**

**American United Life Building, mini-auditorium, 2<sup>nd</sup> floor**

Conducted by: Indiana Department of Insurance

Coordinator: Carol Cutter, Chief Deputy of Health and Legislative Affairs

**Attendees:** Please sign the sign-in sheet *Legibly!*

**Note taker:** Linda Merkl, Associated Reporting

---

**1:00 PM**

### **Review of Comments from Prior Meetings**

Pre-authorization/pre-certification language to help establish some standard procedures

Clarification of categories of care when pre-auth is required

Appropriate timelines for each category of care

---

**2:00 PM**

### **Questions we need answers to**

Who determines what scan is appropriate for the various health conditions?

How is that information communicated to the "call center" responders?

What is the procedure when a denial occurs for a stat or urgent condition?

Outsourced (out-of country) call center concerns

---

**2:30 PM – 3:00 PM**

### **Conclusions/Wrap Up**

Pre-auth language and procedures

ID card logo for fully-insured/self-funded distinction

Others?

---

## **Proposed Language**

When prior approval for a covered service is required of and obtained by or on behalf of a covered person, the approval shall be final and may not be rescinded by the payor once the service has been provided, except in cases of fraud, misrepresentation, nonpayment of premium, exhaustion of benefits, or ineligibility.

During an approved surgical or other invasive procedure, if a provider performs and additional covered procedure due to medical necessity, coverage may not be denied although the additional procedure was not included in the original pre-authorization approval.

RE: Indiana Department of Insurance Study Committee

Mrs. Cutter,

Thank you for chairing the round of Study Committee meetings held in July, August and September. Unfortunately, I was not able to attend the September meeting because of a scheduling conflict. However, I do want to follow up on your request for costs to private practice physicians associated with complying with insurance companies' requirements for referrals, pre-certifications and prior authorizations. I would also like to address the issues of standardizing 1) EOBs, 2) Uniform Insurance Cards, and importantly 3) A Uniform Timely Filing Limit.

- 1) Referrals, Pre-Certifications, Prior Authorizations
  - a. As a primary care office (Family Medicine), we probably feel the impact of these requirements more than most specialists. This is because as the patients' medical home, we are on the front line of patient care and not able to pass these responsibilities on to another provider.
  - b. If we do not provide these services to our patients, they will not/cannot get the tests and treatment they need. The problem, as we see it, is that these requirements add to our costs but do not add to our revenue.
  - c. Doctors' offices operate on a thin margin without the additional costs associated with ever-changing Referral, Pre-Certification, and Prior Authorization requirements. Additionally, requirements differ from policy to policy within the same insurance company as acknowledged in the meetings by the insurance companies represented. Despite publications and web sites provided by the insurance companies to help navigate their requirements, keeping track of the multitude of requirements is literally impossible. In a market where doctors have to fight with Congress and CMS every year to avoid real and significant cuts in reimbursements rates and have experienced actual cuts in reimbursements from private insurance companies, doctors have to see more patients just to maintain their revenue stream. Over the long-term, this risks the health and well being of patients.
  - d. While we are told by insurance companies that in an emergent/urgent situation, the facility rendering the service can in fact perform the service without the Pre-Certification, our experience has been that they will not. This is understandable, as they have no control over the Pre-Certification process and will not be paid by insurance companies without Pre-Certification.
  - e. As a primary care office, we frequently order CT Scans and Dopplers based on urgent need. These scans are typically of the head or abdomen due to a sudden onset of symptoms, worsening condition, severe abdominal pain, or change in mental status. While

we have not had any test denied, we average approximately 10 hours per week for Pre-Certifications of these tests.

- f. Our office spends approximately 5 hours per week processing Prior Authorizations for patients. This is kept to a minimum for new prescriptions, because if the pharmacy calls to ask for a substitution of the new prescription based on the insurance company's formulary, our doctors authorize the substitution if possible. Still the chart has to be pulled, reviewed, and refiled. The majority of these 5 hours is for processing Prior Authorizations resulting from a change in the insurance company's prescription formulary or from a patient's employer changing insurance companies. (It is not uncommon for an employer to change annually, in order to minimize premium increases.)
  - i. As an example, please refer to the included letter from Cigna Pharmacy Services Center, dated July 08, 2007 RE: GUIDELINES FOR PROTON PUMP INHIBITOR (PPI) COVERAGE FOR CIGNA PLAN PARTICIPANTS (Revised 7/1/06)
  - ii. This patient was being successfully treated with Nexium prior to changing insurance companies.
  - iii. In order to continue the patient's current course of treatment, the patient's chart was pulled, the doctor had to review the chart, complete the form, have it faxed back to Cigna and the chart had to be refiled.
- g. In calculating our costs for Referrals, Pre-Certifications, and Prior Authorizations, I analyzed several factors:
  - i. The average number of Referrals, Pre-Certifications, and Prior Authorizations per week,
  - ii. The average staff time to process each Referral, Pre-Certification, and Prior Authorization (including Nursing and Medical Records staff time),
  - iii. The average Physician time to review the requests and patient's medical record, and to complete the required documentation for each Referral, Pre-Certification, and Prior Authorization,
  - iv. Costs associated with the staff and Physician time,
  - v. The average weekly costs were then annualized using a 50-week year.
- h. I believe that our costs associated with Referrals, Pre-Certifications, and Prior Authorizations are likely less than most other medical offices as our practice measures consistently beat the national practice management benchmarks of the Medical Group Management Association (MGMA). We estimate our cost at approximately \$25,000 per FTE physician per year to process Referrals, Pre-Certifications, and Prior Authorizations.
- i. I understand the insurance companies' desire to contain costs and that there is no easy solution. However, with their current procedures, costs are being shifted to providers, who are struggling with increasing costs and stagnant reimbursements. I would like to suggest the following two possible solutions to the issue of Referrals, Pre-Certifications, Prior Authorizations:
  - i. The legislature could mandate that insurance companies' be allowed to universally require Referrals, Pre-Certifications, and Prior Authorizations from all providers for a fixed period (1-2 years) after contracting. During this period of universal requirement, the insurance companies can monitor provider performance, flagging a percentage of providers whom they deem as "over utilizers." Insurance companies can require these "over utilizers" to continue with the Referral, Pre-Certification, and Prior Authorization requirements until they meet predetermined utilization standards.

1. Insurance companies are already implementing “quality initiatives” and quality ratings of providers. As such they have demonstrated that they are currently collecting treatment and testing patterns of providers. This data would be useful and less expensive to all parties in monitoring provider performance.
  - ii. This proposal would require all health insurance companies to pay an annual fee as part of their insurance licensing requirement to cover the cost of the state collecting data on quality indicators and rating providers based on those indicators. Because of their medical expertise, representatives of each medical specialty would define the clinical quality care indicators and rating scale, while representative from the insurance companies would define the non-clinical indicators and rating scale. Providers below a predetermined rating level could be required by insurance companies to obtain Referrals, Pre-Certifications, and Prior Authorizations. This recommendation is based on extending the experience and concept of CAQH (Council for Affordable Quality Health Care) to a State of Indiana clearinghouse for quality care. CAQH demonstrates the experience many insurance companies have successfully collaborating in the formation of an organization to gather and maintain common data. CAQH collects and maintains credentialing data for its member insurance companies. Although the CAQH name indicates that the organization promotes quality health care, it does so in the limited scope of credentialing. This type of State clearinghouse would serve several functions.
    1. Ensure an impartial and consistent monitoring and rating of providers, which would give patients, providers and insurance companies objective benchmarks. Unfortunately current insurance quality measures are not based on quality of care, but cost containment for them.
    2. Save Insurance companies money, because the costs for analyzing and rating the data would be spread over many companies and would give insurers an objective measure to determine which providers needed monitored instead of monitoring all providers,
    3. Save most providers money as it would reduce the number of Referrals, Pre-Certifications, and Prior Authorizations required.
- 2) EOBs
- a. Uniform EOBs would make it easier for patients and medical offices to understand Explanations of Benefits. Currently every company has their own format, which slows the review process and consumes more staff time. I have provided examples of various EOBs for your benefit and the benefits of legislators if required.
  - b. As insurance companies and government push providers away from paper and towards electronic transactions, Uniform EOBs would allow easier programming of auto-posting features in medical billing software and slow the increase in costs.
- 3) Uniform Insurance Cards
- a. Uniform Insurance Cards would simplify the gathering and entry of insurance information into medical office billing systems. Again, every company has their own format, which slows the review process, consumes more staff time and results in billing errors. I have provided examples of various insurance cards for your benefit and the benefits of legislators if required.
  - b. Uniform Insurance Cards would allow for scanning of insurance information into our billing software. This would decrease billing errors and decrease staff time spent entering data thereby lowering the costs of healthcare.

- c. The following minimum information should be on every insurance card (it should be in the same location on every card as well)
    - i. Policy Holder Name
    - ii. Covered Individual Name
    - iii. Policy Number
    - iv. Group Number
    - v. Copay Amount
    - vi. Paper Claims Filing Address
    - vii. Electronic Claims Filing ID#
- 4) Uniform Timely Filing Limit
- a. Currently, Indiana has no legislation regarding Timely Filing Limits. Insurance companies dictate their own timely filing limits, which can be as little as 45 days from the date of service.
  - b. Many companies actually penalize contracted providers with shorter timely filing limits than non-contracted providers.
    - i. For example, CIGNA requires participating providers to file claims within 6 months from the date of service, and non- participating providers to file claims within 1 year from the date of service.
  - c. Indiana's Medical Professionals provide a valuable service to Indiana's citizens, and Indiana's citizens contract with insurance companies to pay for medical services rendered. Unfortunately, it seems that with investor pressures for record profits and the competition to lure the best insurance administrators with lucrative contracts has led insurance companies to look for ways lower actual healthcare expenditures. One method to lower healthcare expenditures seems to be to deny and delay payment for services rendered.
  - d. Indiana's Medical Professionals need to be paid for services rendered in order to continue providing said services. Unfortunately, while providers do make every effort to file claims in a timely manner, as it is not in the best interest of the provider to hold claims longer than necessary, some filing deadlines are missed for a multitude of reasons. Typically, this is because the patient has given the provider inaccurate insurance information, but can also be because a charge was simply not entered at the time of service.
  - e. In July 2006, a law went into effect (SB147) recognizing a medical professional's right to be paid for services rendered, beyond 365 days after a patient's date of service by placing a two year limit on a medical professionals ability to request additional payment for an under paid claim. The same law gives Insurance companies two years to find and correct their payment mistakes by demanding a repayment of money it over paid a medical provider for health services rendered.
  - f. I would like to suggest that the Indiana Generally Assembly establish a Uniform Timely Filing Limit of two years from the date of service, thereby creating parity with the insurer's ability to demand repayment of money in overpaid for health care services. This will eliminate disparate and arbitrary deadlines, which result in limiting payment for services rendered, giving medical provider's sufficient time to discover and resolve billing errors, and providing insurers the necessary cut-off for reconciling their financial obligations.
  - g. I would further like to suggest that the Indiana Generally Assembly establish a Timely Filing Limit of 6 months from notice or two years from the date of service, whichever is later, to file with the insurer responsible for the claim, when the original claim has been

filed in a timely manner to a payer who is later determined not to be responsible for the claim.

- h. At the second Committee Meeting, a representative from one of the insurance companies stated that they could not support a 2 year timely filing limit because they need to be able to close their books at year end in order to project future expenditures and premium adjustments. In other words, they need to know their current obligations and expenditures in order to budget for next year with certainty. This argument, however, is a red herring.
  - i. Provider offices make current expenditures and future budgets based on practice cash flow. When insurance companies take-back money paid to a provider, up to 2 years after the fact, they are in affecting our “closed books” and instilling uncertainty into our budget process.
  - ii. Depending on the date of service, expenditures are already carried from one year to the next, yet insurance companies are able to project future expenditures and premium adjustments.
  - iii. The amount of money involved in “late” filing is statistically insignificant, and providers will continue to file claims as promptly as possible. It is not in the providers’ best interest to hold claims longer than necessary. Insurance companies will have sufficient data to project future expenditures, especially after the initial year.

Again, thank you for considering my input in this process. I am forwarding the referenced materials under separate cover. If you have any questions or need clarification on any issue, I am always available. You can reach me by direct cell phone, direct office phone, fax, or email as outlined below.

Sincerely,

Michael E Yoder, MPA CAPPMEFPM
